CalDigit EL5 Element 5 Hub

9 ports

Connecting the Element 5 Hub to your computer

The Element 5 Hub features a reversible design, allowing you to place the device on either side of your laptop for

optimal port placement.

Choose which side of your laptop you would like to use, flip the Element 5 Hub if required, and follow the steps as below.

1. Connect the AC power cord to your wall outlet, and connect the other end of the power cord (IEC320-C5) into the Element 5 Hub's power supply.
2. Connect the barrel connector to the [DC in:] port on the Element 5 Hub.

3. Connect the supplied Thunderbolt 5 cable to the port labelled [Computer] on the Element 5 Hub.

4. Connect the supplied Thunderbolt 5 cable to your computer's Thunderbolt 5/4/3, USB4, or USB-C port.

5. Turn on your computer or host device, and the LED light will illuminate.
6. When you first connect a Thunderbolt/USB device to a macOS or Windows computer, you will need to approve the device on the pop-up window or in the settings. After you approved it, the Element 5 Hub will be ready for use.

Reminder

Only use the supplied Thunderbolt 5 cable or Thunderbolt 5 cables that offer full 80Gb/s performance. Windows laptops with proprietary charging or ports without power delivery will not charge. If using CPU or GPU intensive applications, we recommend connecting your laptop charger directly to your laptop for increased power.

Compatibility & Performance

Host	Compatible
Thunderbolt 5 Mac	✓
Thunderbolt 5 PC	✓
Thunderbolt 4 Mac	✓
Thunderbolt 4 PC	✓
Thunderbolt 3 Mac	✓
USB4 v2 PC	✓
USB4 PC	✓
USB-C PC	✓
iPad (Thunderbolt or USB-C)	✓
iPhone (USB-C)	✓
Windows Tablet (Thunderbolt or USB-C)	✓

The Element 5 Hub is universally compatible with all Thunderbolt or USB Type-C host devices. However, in order to get the maximum features and performance from the Element 5 Hub an 80Gb/s Thunderbolt 5 or USB4 v2 host device is required.

Users on Thunderbolt 4 (40Gb/s) or lower will see reduced functionality.

Thunderbolt 3 Windows PCs are not supported.

Bandwidth Boost

The Element 5 Hub features Bandwidth Boost which will allocate up to 120Gb/s performance when bandwidth-intensive monitors are connected. This is in order to provide higher resolutions and refresh rates.

When Bandwidth Boost is active the rest of the Element 5 Hub will provide up to 40Gb/s performance for the remaining devices connected to the hub.

Bandwidth Boost	Bandwidth Left for Data
Active	40Gb/s
Not Active	80Gb/s

Monitor Compatibility

You can connect up to 3 external displays to the Element 5 Hub on Windows Thunderbolt 5 PCs that support up to 3 displays, or up to 2 displays on Macs and PCs that support dual displays.

To connect external displays to the Element 5 Hub you can either connect Thunderbolt or USB-C monitors directly to the spare Thunderbolt 5 ports, or use USB-C to HDMI or DisplayPort Adapters (sold separately) to the spare Thunderbolt 5 ports.

Triple 4K 144Hz									✓

1. 5K monitors must be a Thunderbolt 4 monitor or an Apple Studio Display. Does not support dual LG UltraFine 5K. 6K monitors can be a Thunderbolt 4 monitor or an Apple Pro Display XDR.
2. Higher refresh rates (above 60Hz) may require DSC (Display Stream Compression) support on the monitors and host GPU. The bit/color depth may vary in order to support higher refresh-rates.

3. Some M3 MacBooks such as the MacBook Air can support dual external monitors up to 5K and 6K when the laptop lid is closed (clamshell mode).
4. Currently, M1/2/3/4 Macs can only support up to HDMI 2.0b over its Thunderbolt ports. As such, resolutions will be limited to 4K 60Hz when using an HDMI adapter. If a higher refresh-rate is required, please use a USB-C to USB-C or USB-C to DisplayPort or DisplayPort to DisplayPort connection. For more information about a Mac's external display support please visit <https://support.apple.com/en-us/101571> and [https://www.caldigit.com/macbook-multiple-monitor-support-with-caldigit-thunderbolt-docks/****](https://www.caldigit.com/macbook-multiple-monitor-support-with-caldigit-thunderbolt-docks/)
Results may vary due to OS updates. For external display compatibility over a single Thunderbolt connection on different Windows computers, please refer to the manufacturer's website.

General Use Warnings

- Please read the Element 5 Hub manual thoroughly and familiarize yourself with the product before use.
- Avoid using the Element 5 Hub in extremely hot and cold environments. A safe temperature range is between 50° to 95° F (10° to 35° C).
- Avoid using the Element 5 Hub in humid environments. Moisture and condensation can accumulate in the device and cause damage to the electrical components.
- Only use the power adapter that has been supplied with the Element 5 Hub. An excessive or inadequate power supply can result in unstable performance or device failure.

Safety Warnings

- Keep the Element 5 Hub away from liquids and moisture. Exposure to liquids can result in damaging the unit, electric shock, and result in a fire hazard.
- If your Element 5 Hub gets wet while it is still off, do not turn it on. In the case of any issue with the device, do not attempt to repair or open the device yourself. Doing so can result in personal injury, damage the device, and will void the warranty.

If you have any issues, please contact CalDigit Technical Support.
