– Usage of the Speed Light –

1. Please put the Stroboscope Testrecord on your turntable.
2. To adjust the optimal speed for the turntable with the Speed Light, hold the Speed Light about 1,97 – 3,94 inch (5 – 10 cm) over the Stroboscope Testrecord (picture 1).

Pic. 1: Distance between Speed Light and Stroboscope Testrecord

3. When the black lines stop in the blue light and do not move visible, you have the optimal speed.  
(33 1/3rpm outside striae, 45rpm inside striae) (picture 1)
  - If the lines move around clockwise, the drive is too fast.
  - When the lines clearly move anticlockwise, the drive is too slowly.
4. For the optimal speed adjustment we recommend our Smart Syncro (Art.No. EL024), so you can exactly adjust the speed on the Hz.
5. If the intensity of the light reduces, please change the battery. Use the exact battery type: V23GA – 12V – Alkaline

## – Attention –

### Open the Speed Light:

If the battery is flat, please open the Speed Light with a thin screwdriver.

You can easily push it in and turn it (picture 2).

Take care about the polarity of the battery when changing (picture 3).

The blue LED is not a laser diode!

Do not look directly in the light!

## Technical Data – Speed Light

Light source: Blue LED / 300Hz precision light source (calibrated)  
Battery: V 23GA – 12V – Alkaline

**Please note:**

An insufficient battery voltage can lead to inaccurate measurement results, even if the voltage is still sufficient to light the blue LED.

In case of extreme fluctuations of the measurement results, we recommend replacing the battery.
