Product Usage Instructions

Careful Handling

Avoid potential damage to your mobile phone by following these guidelines:

- Avoid exposing the phone to hearing aids, other medical devices, and other electronic devices in homes and vehicles as they may prove to be hazardous.
- Use only Clout accessories and batteries. Using incompatible batteries and/or accessories may damage your mobile phone or cause injury.
- Never crush or puncture the battery. Avoid exposing the battery to high external pressure, which can lead to an internal short circuit.

Safety Precautions

Operate your mobile phone safely with these precautions:

- Do not use the mobile phone while charging. Disconnect it from the charger before use.
- Keep the mobile phone at least an inch away from your body while dialing/answering calls.
- Do not use the mobile phone if the screen is cracked or broken, as it could cause injury to hands and/or face.
- Avoid using your mobile phone in certain areas/places/conditions such as inside aircrafts, medical hospitals/clinics, areas where chemicals are used and/or stored, fuel and gas stations, areas having electrical/electronic equipment, and areas where any kind of blasting activity is being carried out.

Drive Safety

Avoid using your mobile phone while driving. Your primary consideration while driving should be safety.

Interference with Electronic Devices

Mobile phones emit Radio Frequency (RF) signals that may interfere with unshielded or improperly shielded electronic equipment, such as pacemakers.

- Never dispose of the battery or mobile phone in fire.
- Never crush or puncture the battery.
- Avoid exposing the battery to high external pressure, which can lead to an internal short circuit.

SAR (Specific Absorption Rate) information

- This mobile phone is SAR accredited and adheres to international quality benchmarks and safety measures concerning the harmful impact of radiation. It complies with applicable safety requirements for exposure to radio waves. The radio waves exposure guidelines employ a unit of measurement called Specific Absorption Rate (SAR).
- SAR is a measure of the rate at which energy is absorbed by the body when exposed to a radio frequency (RF). SAR is usually averaged either over the whole body or over a small sample volume (typically 1g or 10g of tissue). The recommended SAR limit for a mobile handset is 1.6 W/Kg averaged over a volume containing a mass 1g of human tissue.

SAR Value

- Your phone is designed not to exceed the limits of emission of radio waves recommended by international guidelines.
- SAR (Specific Absorption Rate) is the measurement of body-absorbed RF quantity when the phone is in use. SAR value is ascertained according to the highest RF level generated during laboratory tests.
- The SAR value of the phone may depends on factors such as proximity to the network tower, use of

accessories.

Tested SAR Value of Clout A508 Magma as follows:

- GSM 900MHz: 0.984 W/Kg (1g)
- GSM 1800MHz: 1.072 W/Kg (1g)

Maximum Permitted SAR value is: 1.6 W/Kg (1g)

Introduction

Clout A508 Magma Technical specification
