Accupack A8205 Replacement Procedure

The accupack is designed exclusively for dataloggers: U0110M, U0121M, U0141M, U0843M, U2422, U3120M, U3121M, U3430, U3631M, U4440, U4440M, U5841M, U6841M, U7844M, U8410, U8410M

WARNING

- Replacement may only be carried out by a qualified service technician
- Read this procedure in detail before you replace it
- To add any additional information provided here, use manuals and other documents available in the Downloads section for a particular device at www.cometsystem.com

- Turn off the device:
 - press and hold down the lower button and release the button when the menu item bar lights up
 - briefly press the upper button – press the upper button briefly again to select OFF

- press the lower button to turn off the device
- Unscrew the rear of the device where the accu is located (use the TORX T10 screwdriver)
- Disconnect the old accupack from the device
- Connect the USB charger to the device, and wait until the full battery symbol will be permanently lit (see fig.)

- Unpack the new A8205 accupack, check and, if necessary, adjust the position of the seal in the groove
- Compare the nominal capacity data of the old and new accupack, if they differ, contact the manufacturer or distributor of the device
- Again check that the fully charged battery symbol is on the display and then connect the new accupack to the device -! failure to observe this step can lead to the destruction of a new accupack!
- Assemble the device (the screws tighten gently)
- Charge the unit fully (full-battery symbol must be permanently lit):
 - When charging, the device must be installed indoors with a maximum humidity of 85%, at an indoor temperature ranging between 0°C and +40°C.
- Turn device ON

**COMET SYSTEM, s.r.o., Bezrucova 2901,
