How do I connect my camera to the internet?

Connect the camera to a router or modem with an Ethernet cable. Then, turn on the camera and connect it to the internet. To check if your camera is connected to the internet, open your app and go to "Network". If you see "Connected", then your camera is connected. If you don't see "Connected", then your camera is not connected. To connect, tap on "Connect" and follow the instructions on screen.

How do I reset my camera?

Press and hold the reset button for 10 seconds. Your camera will restart automatically after that.

How do I change my password?

Go to "Camera Settings" in the app and tap on "Change Password". Follow the instructions on screen.

How do I change my Wi-Fi settings?

Go to "Camera Settings" in the app and tap on "Wi-Fi". Follow the instructions on screen.

How do I adjust my camera's motion detection sensitivity?

Go to "Camera Settings" in the app and tap on "Motion Detection". Follow the instructions on screen.

How do I change my camera's name?

Go to "Camera Settings" in the app and tap on "Name". Follow the instructions on screen.

Do wireless cameras work without internet?

WiFi cameras don't need internet if you don't wish to view the footage remotely, backup recordings, or receive alerts. Wireless security cameras usually require WiFi for transmission of video. However, an NVR, ethernet cables, or SD cards can be used in absence of a WiFi connection.

How far will wireless cameras work?

Wireless security camera systems work well as long as the signal from the cameras to the central hub is clear and uninterrupted. Within the home, wireless systems usually have a range of about **150 feet or less**.

Can hidden cameras be detected?

Yes, your cell phone can detect a hidden camera. All you need to do is download a hidden camera detector app. Once you have the app installed, simply open it and scan the area for any hidden cameras. The app will then alert you if any cameras are found.

How much data do security cameras use monthly?

Usually, the frequency of uploading recordings to the cloud is the primary reason a WiFi security camera consumes a large amount of bandwidth and data. WiFi security cameras can consume **up to 60GB** of data transfer per month, depending on the upload frequency.

How do wireless security cameras get power?

There are two main ways wireless security cameras are powered: **a wireless transmitter and batteries**. A wireless transmitter can be placed in the home or business and as long as the camera is within range of this transmitter, it will receive power from it. Another option is to connect it to a battery through an adapter.

Can you use hotspot for security cameras?

Definitely yes! As long as the camera is connecting to the internet, you can access the camera anytime and anywhere. Remote access is available via phone's 3G/4G/5G data network.

Is it better to have wired or wireless security cameras?

Wireless signals don't extend very far – 300 feet at most without a wall or anything else to block the signal. **A wired system will provide a more reliable signal.** Additionally, the video quality will always remain consistent as it won't be susceptible to bandwidth fluctuations.

How can you tell if your iPhone has a camera in a room?

In order to be sure, point the camera at a known source of infrared light – a TV remote is one. When you press a button on the remote, you'll see a small flash of light on your phone – this is what you'll be looking for. So, scan the room and be on the lookout for similar light sources.

How many WiFi cameras can a router handle?

Most of the wireless routers and access points state they can support **about 250 devices connected at once.** This WiFi connection number includes computers, cameras, tablets, mobile smartphones, appliances, and a wide variety of other devices that are now internet-enabled.

Do security cameras use a lot of electricity?

In general, security cameras, either CCTV analog cameras or PoE IP security cameras, are not energy-consuming as other gadgets like computers or bread toasters; they only need very little electricity to work.
