Installation Instructions

Many security cable kits come with a flat bracket which gives you the option to create a loop around an immovable object.

For point-to-point cables, start by threading the cable through the fastener furthest away from where the lock will be positioned.

Place the cable through the flat bracket, loop to stationary location, and then place the cable back through the flat bracket as seen in Fig 1.

Fig 1

You can also use the flat bracket to connect two computers together for greater security as seen in Fig 2.
