### D-Link COVR-1100 Wireless Mesh Router

**Configuration using APP.**

- COVR-1100 is a wireless mesh router that can be paired with more devices (up to 4) to create a whole home wi-fi system. You should be using D-Link wi-fi app for the configuration of this device.
- There are two modes supported by this device. Router mode and Bridge mode. If you connect it directly with the ISP line, then you need to configure as Router mode and if there is an existing router then you can configure it as bridge mode.
- On the backside of the device there are two ports. Ethernet port and Internet port. To configure in router mode, connect the ISP cable to the router in Internet port. Connect the mobile phone to the wireless network of the covr-1100 and launch the D-Link wi-fi app.

- Click on Set up New Network.

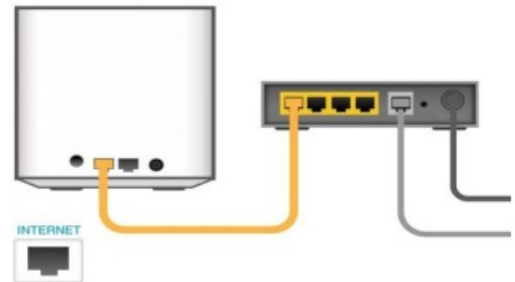

## Power off Your Modem

Unplug your DSL or cable modem. If your modem uses a battery backup, please also remove the battery.

NEXT

## Connect to Your Modem

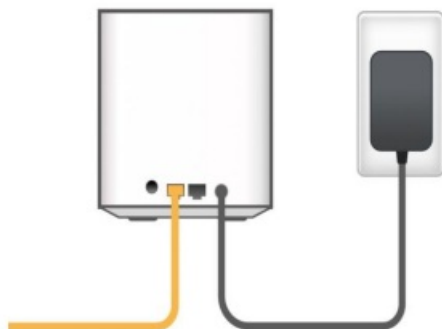

Plug one end of the Ethernet cable into the **INTERNET port** of the device. Plug the other end into your modem or router from your ISP.

NEXT

- Click Next.

## Power on Your Device

Plug the device into a power socket. Make sure that the power button located on the back side of the device is pressed down, then tap NEXT.

NEXT

## Ready for Configuration

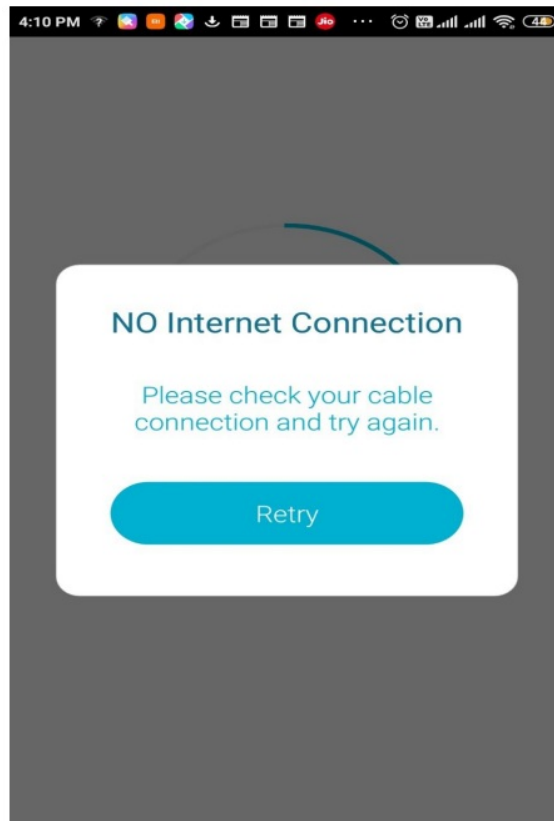

When the status LED turns **blinking orange**, tap NEXT.

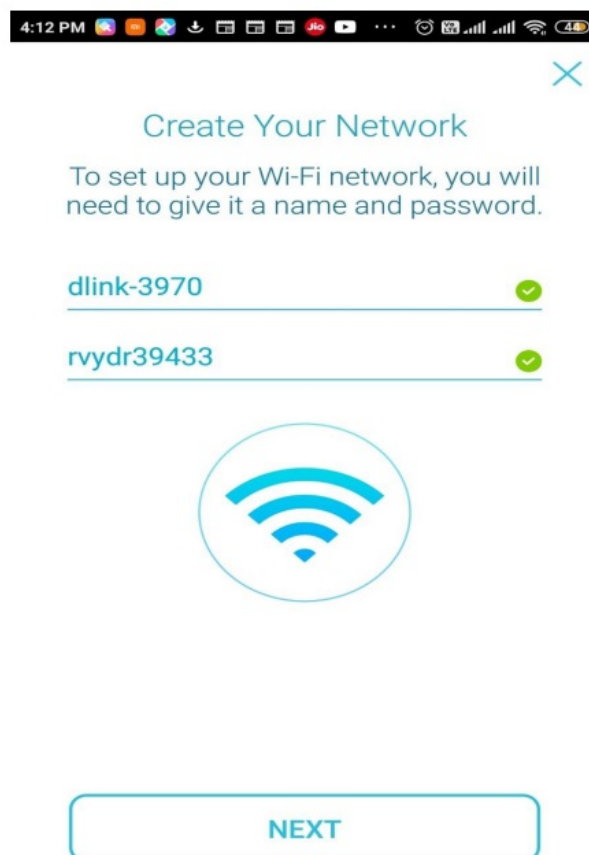

If the status LED does not change to blinking orange after 2 minutes, [tap here](#) for more information.

NEXT

- Click Next.

- If you get this message, then you can reconnect to the wireless network of the router.

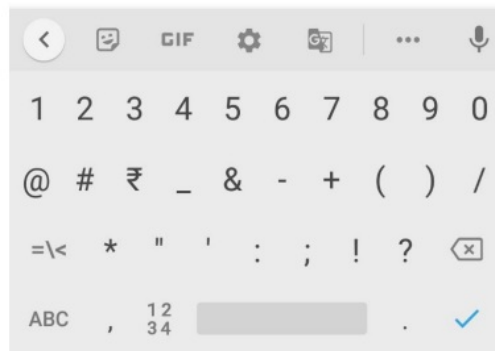

- On this screen you will get the option to change the wireless name and password of the router. If you change it then you will have to reconnect the new network name.

## Protect Your Device

Give your device an admin password. This password is used to make changes to your device's settings through the D-Link Wi-Fi app and the device's web based user interface.

dlink-3970

Wi-Fi Password  
rvydr39433

Make a note of this information for future reference.

SAVE

- If you want to connect more covr-1100 devices to this main point then just connect the slave device to the master covr point with a ethernet cable from lan to lan port and wait for the led on the device to become white in color. Once it becomes white then you can remove the ethernet cable and place the slave device at a location where it is receiving wireless signal from the main covr point.
