Danfoss Coolselector 2 Server

Product Information

Specifications

- Product Name: Coolselector2
- Version: 2.0
- Release Date: February 22, 2022
- Language: English

Product Usage Instructions

Installation on Multi-User Systems

To install Coolselector2 on a multi-user system, follow these steps:

- Download the setup.exe file from the official website.
- Open the command line interface on the target system.

Run the following command:

This command will initiate a silent installation without creating desktop icons or start menu shortcuts, and it will install Coolselector2 in the specified directory without enabling auto-updates.

System requirements

Coolselector®2 runs on Microsoft Windows 7 or later. In case you need to install Coolselector®2 on computers, configure…

1. Use **http://coolselectoronline.danfoss.com** for an online experience.
2. Contact us at **coolselector@danfoss.com** for installation support on older configurations.

Multi-user systems

Coolselector®2 should only be installed on multi-user systems by qualified personnel. The command-line switches for the setup program listed below might be useful for such installations:

- **/VERY SILENT**

  No message boxes, confirmations, etc.
- **/MERGETASKS="!desktopicon,!startmenu"**

  No icons in the start menu or on the desktop
- **/ALLUSERS**

  Install icons for All users instead of the current user (default). Requires the installation to be run with administrative privileges.
- **/DIR="x:\dirname"**

  Overrides the default directory name. A fully qualified pathname must be specified. May include an "expand:" prefix, which instructs Setup to expand any constants in the name. For example: "/DIR=expand:"{pf}\My Program" will install into "Program files (x86)\My Program" folder. Note that depending onthe folder, installation might require administrative privileges.
- **/NoAutoUpdate**

  Prevents Coolselector®2 from trying to automatic checking for updates

Command line example:
setup.exe /VERYSILENT/MERGETASKS="!desktopicon,!startmenu" /DIR="c:\Coolselector2" /NoAutoUpdate

FAQ

- **Q:** What is the purpose of the command line example provided?
  - **A:** The command line example is used to perform a silent installation of Coolselector2 on a multi-user system, saving time and streamlining the installation process.
- **Q:** How can I customize the installation settings?
  - **A:** You can modify the command line parameters to include or exclude specific tasks such as creating desktop icons or start menu shortcuts based on your preferences.
- **Q:** Can I change the installation directory?
  - **A:** Yes, you can specify a different installation directory by adjusting the /DIR parameter in the command line example before running the installation.
