**Danfoss EKE 1P Stepper Valve Extension Module** 

### Identification

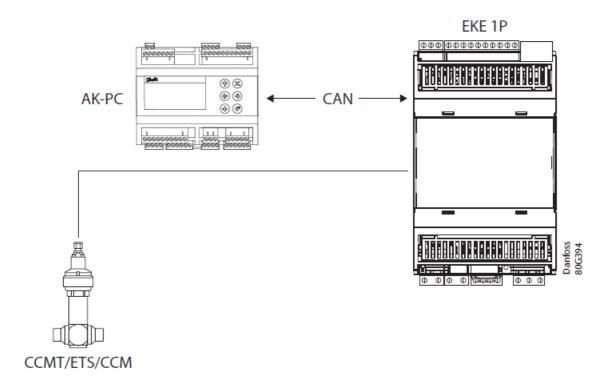

## Dimensions [mm]

# EKE 1P

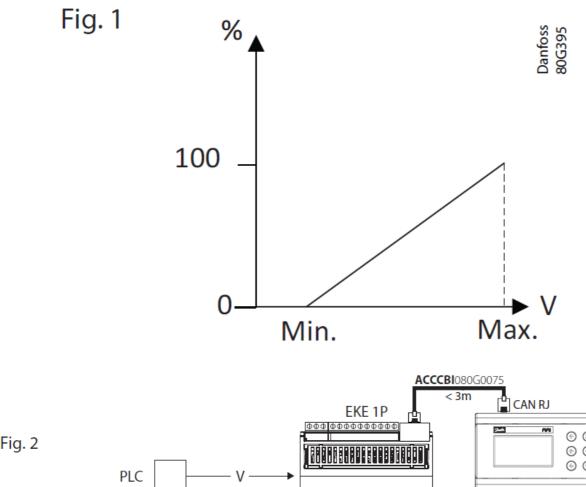

Weight: 152 g / Gewicht: 152 g / Poids : 152 g / Peso: 152 g / Peso:

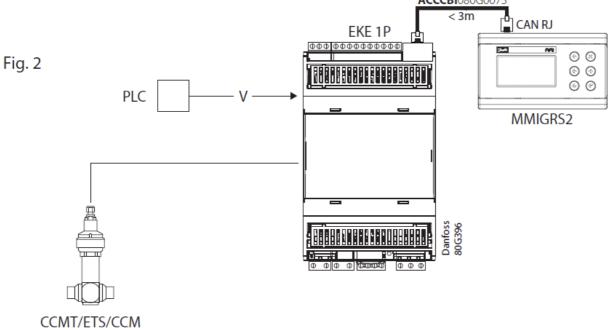

Danfoss 80G8215.11

### Application 1

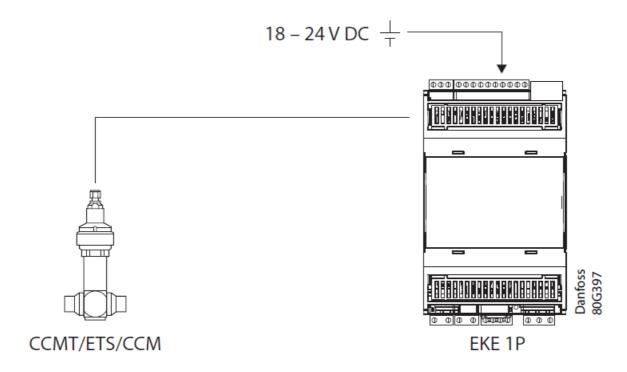

**Application 2** 

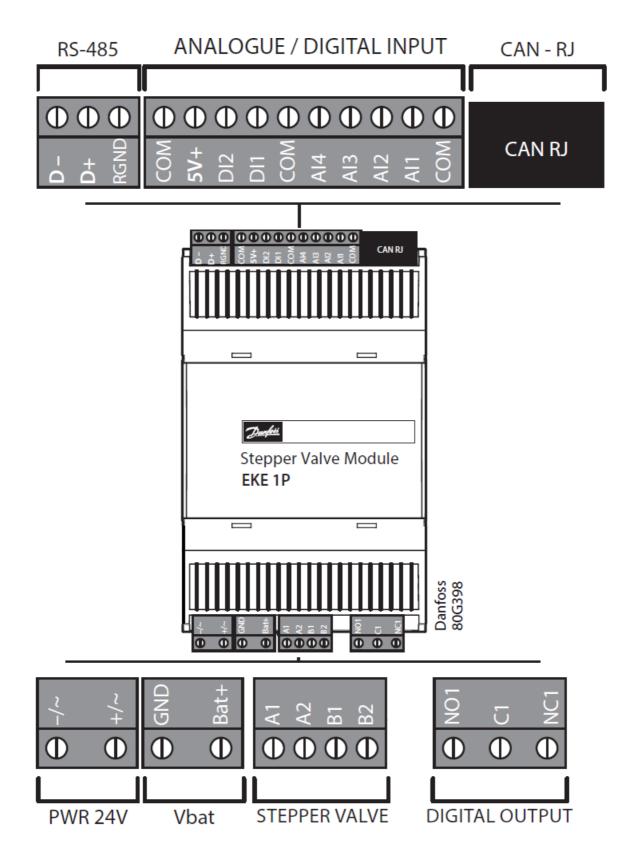

Battery back-up

**Connection overview: EKE 1P** 

### Valve connection

| CCMT/ETS/CCM | ETS 6  | EKE 1P |
|--------------|--------|--------|
| White        | Orange | A1     |
| Black        | Yellow | A2     |
| Red          | Red    | B1     |
| Green        | Black  | B2     |

### Application 1 driver configuration

Al4 open circuit or connected to 0V (COM): high-pressure valve driver

Al4 connected to 5V+: receiver valve driver

### Recommended wire size and cable distance between EKE controller and stepper motor valve

| Cable length  | 1 – 15 m                      |
|---------------|-------------------------------|
| Wire diameter | 0.52 / 0.33 mm2 (20 / 22 AWG) |

### **Technical specifications**

### Power supply:

EKE has galvanic isolation by switch-mode power supply. 24 V AC  $\pm$  20 %, 50/60 Hz. Maximum power consumption: 18 VA. Input voltage rating (DC): 24 V DC  $\pm$  20%, 15 W.

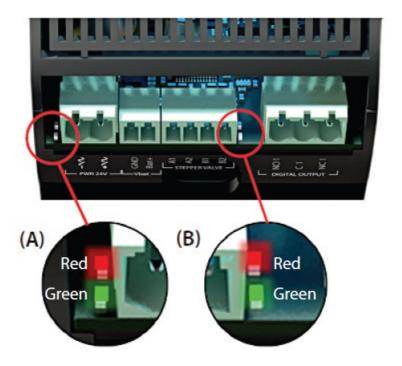

| I/O                 | Туре                         | No | Specification   |
|---------------------|------------------------------|----|---|
| Analogue i<br>nputs |                              |    | Max. 15 V input voltage   |
|                     |                              |    | Do not connect voltage sources to unpowered units without limiting the current to analogue inputs (overall 80 mA). Open circuit HW diagnostics available for voltage input on: <b>Al4</b> |
|                     |                              |    | Al3*  |

|                   |                       |   | Application 2: Connect directly to graphical display, MMIGRS2. Activate the termi nation on the graphical display.   |

<sup>\*</sup> Only used in application 1

### **LED** indication:

Two sets of Light Emitting Diodes make it possible to follow the operation status of the valve and the controller.

LED A: Two status LEDs indicate power and controller operation

### Power-up:

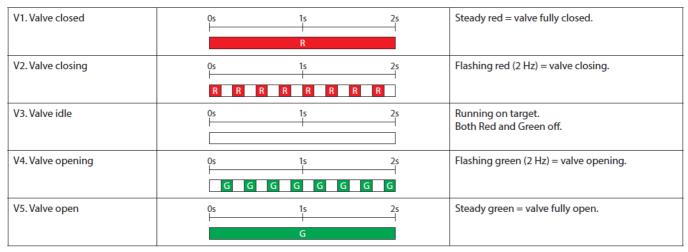

| 1. Al valve driver module | 0s 1s 2s                                      | Configured as Al controlled stepper valve - will blink for 30 sec. after power-up. |
|---------------------------|---|--|
| 2. HP module              | 0s 1s 2s                                      | Configured as HP module -<br>will blink for 30 sec. after power-up.                |
| 3. Receiver module        | 0s 1s 2s                                      | Configured as receiver module - will blink for 30 sec. after power-up.             |
|                           | Os 15 2s  R R R R R R R R R R R R G G G G G G | Hardware problem.  |

### Normal operation:

| 4. Power                 | 0s 1s 2s | Pattern during normal operation.                       |
|--------------------------|----------|--|
| 5. MODBUS error power    | 0s 1s 2s | Pattern during normal operation,<br>but MODBUS error.  |
| 6. Power main switch OFF | Os 1s 2s | Pattern during normal operation,<br>main switch = OFF. |
|                          | 0s 1s 2s | Hardware problem.                                      |

R = Red G = Green

### LED B: Two status LEDs to indicate valve operation

R = Red G = Green

### Commonly used parameter identification in application 2

**Note:** In application 1, the most commonly used parameters are conÿgured in the AK-PC. Default commissioning password: "300"

| Parameter               | Defaul<br>t | Description  |
|-------------------------|-------------|--|
| Main switch             | 0           | 0 = Off, 1 = ON  |
|                         |             | 0=Application 1 – selection by Al4   |
| Mode                    | 0           | 1=Application 1 – High Pressure expansion module 2=Application 1 – Receiver Expansion module 3=Application 2 – Valve Driver  Note: changing this setting also changes the EKE 1P address, causing communication with the graphical display to stop. Communication will resume after a power cycle. |
| Al valve input sc ale   | 2           | 0 = 0 - 5  V   |
|                         |             | 1 = 1 – 5 V  |
|                         |             | 2 = 0 - 10 V   |
|                         |             | 3 = 2 - 10 V   |
|                         |             | 4 = 5 - 0  V   |
|                         |             | 5 = 5 - 1 V  |
|                         |             | 6 = 10 - 0 V   |
|                         |             | 7 =10 – 2 V  |
