DeGroot Amaryllis Assortment Case Pack

Product Information

- **Product Name:** Amaryllis
- **Model Number:** TM

Specifications

- **Plant Type:** Bulb
- **Flowering Period:** Throughout the year
- **Required Planting Depth:** Top 1/3 of the bulb above the media surface
- **Watering Requirements:** Regular watering, keeping the media moist but not soggy
- **Fertilizer Requirements:** Fertilize throughout the summer
- **Storage Requirements:** Cool, dark place for at least 8 weeks

Product Usage Instructions

Before you begin planting:

If your pot has holes in the bottom, please be sure to place it on a saucer or tray large enough to encompass the bottom.

Planting Instructions:

1. Prepare the planting media.
2. Plant the bulb with approximately the top 1/3 of the bulb showing above the media surface.
3. The media should be moist, and additional water should not be needed at this time.

Maintenance and Care:

Water regularly throughout the flowering period, ensuring that the media remains moist but not soggy. Avoid overwatering as it may lead to root rot.

After Flowering:

Once the flowering period is over, remove the flower stem just above the bulb. Continue to water the plant regularly.

Seasonal Care:

- In the spring, transplant the bulb outdoors and continue regular watering. Fertilize throughout the summer to promote healthy growth. After the first frost, dig up the bulb and store it in a cool, dark place for at least 8 weeks.
- After the storage period, repot the bulb and a new cycle of growth will begin.

Frequently Asked Questions

- **How often should I water the Amaryllis during the flowering period?**

Water the Amaryllis regularly, keeping the media moist but not soggy. Avoid overwatering.

- **Can I plant the Amaryllis bulb directly in the ground?**

Yes, in the spring, you can transplant the bulb outdoors for it to grow in the ground.

- **How long should I store the bulb during the winter?**

Store the bulb in a cool, dark place for at least 8 weeks after the first frost.

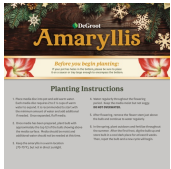

Before you begin planting:

If your pot has holes in the bottom, please be sure to place it on a saucer or tray large enough to encompass the bottom.

Planting Instructions

1. Place media disc into pot and add warm water. Each media disc requires 2 to 2 ½ cups of warm water to expand. It is recommended to start with the minimum amount of water and add additional if needed. Once expanded, fluff media.
 2. Once media has been prepared, plant bulb with approximately the top 1/3 of the bulb showing above the media surface. Media should be moist and additional water should not be needed at this time.
 3. Keep the amaryllis in a warm location (70-75°F), but not in direct sunlight.
 4. Water regularly throughout the flowering period. Keep the media moist but not soggy. DO NOT OVERWATER.
 5. After flowering, remove the flower stem just above the bulb and continue to water regularly.
 6. In the spring, plant outdoors and fertilize throughout the summer. After the first frost, dig the bulb up and store bulb in a cool dark place for at least 8 weeks. Then, repot the bulb and a new cycle will begin.
