S6010-ON Networking OS Power Switch

Dell System S6010–ON 9.14(2.14) Release Notes
This document contains information on open and resolved caveats, and operational information specific to the Dell Networking OS software and the S6010-ON platform.

Current Release Version: 9.14(2.14)
Release Date: 2022-04-15
Previous Release Version: 9.14(2.12)

(i) **NOTE:** This document may contain language that is not consistent with current guidelines of Dell Technologies. There are plans to update this document over subsequent releases to revise the language accordingly.

Incorrect behavior or unexpected caveats are listed as the Problem Report (PR) numbers within the appropriate sections.

For more information on hardware and software features, commands, and capabilities, refer to the Dell Networking website at: **https://www.dellemc.com/networking**.

Document Revision History

Table 1. Revision History
Date: 2022–04
Description: Initial release.

Supported Hardware

The following hardware is supported with this platform:
Hardware
S6010-ON chassis
Thirty-two QSFP+ ports (40 Gbps)
Two AC/DC PSUs
Five fan subsystems

(i) **NOTE:** If all the five fan trays are found to be empty or faulty, the system shuts down after one minute.

Supported Software

The following software is supported with this platform:

Software	Minimum Release Requirement
Dell Networking OS	9.14(2.14)
ONIE	3.26.1.0-3

New Dell Networking OS Version 9.14(2.14) Features
The following features are integrated into the Dell Networking 9.14.2 branch through this release:
None.

Restrictions

- You can use non-Dell qualified cables, adapters, and optics in a S6010-ON switch, but Dell Networking does not guarantee their performance as the S6010-ON does not support non-Dell qualified transceivers of 25G and above. If you insert a non-Dell qualified transceiver of 25G and above into a SFP28, QSFP+, or QSFP28 port, the switch places the interface in an error-disabled (operationally down) state and generates a syslog message, such as: $S6010LC0640:8 $IFAGT-2- RANSCEIVER_UNSUPPORTED_ERROR: Transceiver in slot 1 port 49 unrecognized, putting interface in operational-down state.

  To verify the error-disabled status of an interface, enter any of the following show commands.

Dell# show inventory media

slot	port	Type	Media	Serial Number	Dell Qualified
1	49	UNKNOWN	UNKNOWN	USC1D6J	No**
1	50	QSFP	40GBASE-LR4	UQ90CTB	No**
1	51	QSFP	40GBASE-SR4	7503835V009Y	Yes
1	52	QSFP	40GBASE-CR4	10190002	No
1	53	QSFP	40GBASE-SR4	FE2429470007	Yes
1	54	Media not present or accessible			

** Interface is down(error disabled) as transceiver is not Dell Qualified
Dell# show interfaces forty Gig 1/49
forty GigE 1/49 is up, line protocol is down (error-disabled[Transceiver Unsupported])

- Prerequisite steps to upgrade the Dell Networking OS from earlier version to 9.14.2.0 or later:
    1. Uninstall the older version of the Open Automation (OA) package
    2. Upgrade the Dell Networking OS to 9.14.2.0 or later version
    3. Install the following OA packages from the respective upgraded version:
    a. SmartScripts
    b. Puppet
    c. Open management infrastructure (OMI)
    d. SNMP MIB

Prerequisite steps to downgrade the Dell Networking OS from 9.14.2.0 or later to the earlier version:

1. Uninstall the OA package of 9.14.2.0 or later version
2. Downgrade the Dell Networking OS to an earlier version
3. Install the respective OA package from an earlier version

For more information about installing, uninstalling and upgrading the Dell Networking OS and OA package, refer the respective Dell System Release Notes.

- f you downgrade the Dell Networking OS version from 9.14.2.14 to 9.11.0.0 or any older versions, the system
    displays the following error message even though there is no functional impact:

CDB boot error: C.cdb file format
Before downgrading, save the current configuration and then remove the CDB files (confd_cdb.tar.gz. version and confd_cdb.tar.gz). Tore move the files, use the following steps:
Dell EMC# write memory
Dell EMC# delete flash://confd_cdb.tar.gz.version
Dell EMC# delete flash://confd cdb.tar.gz
Dell EMC # reload

- While deploying the system in the normal-reload mode in BMP configuration, use the ip ssh server enable

command at the beginning of the startup configuration if the write memory command is used at the end of the configuration.

- REST API does not support AAA authentication.
- The following features are not available in the Dell Networking OS from version 9.7(0.0):
  - PIMECMP
  - Static IGMP join (ip imp static-group)
  - IGMP queried timeout configuration (ip imp queried-timeout)
  - IGMP group join limit (ip imp group join-limit)
- Half-Duplex mode is not supported.
- When FRRP is enabled ina VLT domain, no flavor of Spanning tree should concurrently be enabled on the nodes of that specific VLT domain. In essence FRRP and xSTP should not co-exist ina VLT environment.

Changes to Default Behavior and CL| Syntax
The following behavior and CLI changes are applicable to the S8010-ON switch with Dell Networking OS version 9.14(2.14):

None.

Documentation Corrections

This section describes the errors identified in the current release of the Dell Networking OS.

- The router bgp command allows you to configure only one L3 interface with an IPv4 address. The Configuration guide does not mention this limitation and will be corrected in the next release of the guide.

Deferred Issues

Issues that appear in this section were reported in Dell Networking OS version 9.14(2.0) as open, but have since been deferred.
Deferred caveats are those that are found to be invalid, not reproducible, or not scheduled for resolution.
Deferred issues are reported using the following definitions.

Category	Description
PR#	Problem Report number that identifies the issue.
Severity	**81—** Crash: A software crash occurs in the kernel or a running process that requires a restart of AFM, the router, switch, or process. **82** — Critical: An issue that renders the system or a major feature unusable, which can have a pervasive impact on the system or network, and for which there is no work-around acceptable to the customer. **83** — Major: An issue that affects the functionality of a major feature or negatively effects the network for which there exists a work-around that is acceptable to the customer. **84** — Minor: A cosmetic issue or an issue in a minor feature with little or no network impact for which there might be a work-around.
Synopsis	Synopsis is the title or short description of the issue.
Release Notes	Release Notes description contains more detailed information about the issue.
Work around	Work around describes a mechanism for circumventing, avoiding, or recovering from the issue. It might not be a permanent solution. Issues listed in the "Closed Caveats" section should not be present, and the work-around is unnecessary, as the version of code for which this release note is documented has resolved the caveat.

Deferred S6010-ON 9.14(2.0) Software Issues

Issues that appear in this section were reported in Dell Networking OS version 9.14(2.0) as open, but have since been deferred.

Deferred caveats are those that are found to be invalid, not reproducible, or not scheduled for resolution.

The following issues have been deferred in the Dell Networking OS version 9.14(2.0): **None.**

Fixed Issues

Fixed issues are reported using the following definitions.

Category	Description
PR#	Problem Report number that identifies the issue.
Severity	**81—** Crash: A software crash occurs in the kernel or a running process that requires a restart of AFM, the router, switch, or process. **82** — Critical: An issue that renders the system or a major feature unusable, which can have a pervasive impact on the system or network, and for which there is no work-around acceptable to the customer. **83** — Major: An issue that affects the functionality of a major feature or negatively effects the network for which there exists a work-around that is acceptable to the customer. **84** — Minor: A cosmetic issue or an issue in a minor feature with little or no network impact for which there might be a work-around
Synopsis	Synopsis is the title or short description of the issue.
Release Notes	Release Notes description contains more detailed information about the issue.
Work around	Work around describes a mechanism for circumventing, avoiding, or recovering from the issue. It might not be a permanent solution. Issues listed in the "Closed Caveats" section should not be present, and the work-around is unnecessary, as the version of code for which this release note is documented has resolved the caveat.

Fixed S6010-ON 9.14(2.14) Software Issues

NOTE: Dell Networking OS 9.14(2.14) includes fixes for caveats addressed in the previous 9.14 releases. Refer to the respective release notes documentation for the list of caveats fixed in the earlier 9.14 releases.
The following caveats have been fixed in Dell Networking OS version 9.14(2.14):

PR# 170114	
Severity:	Sev 2
Synopsis:	The switch experiences memory leaks when processing certain types of packets.
Release Notes:	The switch experiences memory leaks when processing certain types of packets.
Workaround:	None
PR# 170 232	
Severity:	Sev 2
Synopsis:	The switch sends deprecated VRRP traps.
Release Notes:	The switch sends deprecated VRRP traps
Workaround:	None
PR# 170 301	
Severity:	Sev 3
Synopsis:	The BN mod sqrt () function, which computes a modular square root, contains a bug that can cause it to loop forever for non-prime moduli (CVE-2022-0778).
Release Notes:	The BN mod sqrt () function, which computes a modular square root, contains a bug that can cause it to loop forever for non-prime moduli (CVE-2022-0778).
Workaround:	None

Known Issues

Known issues are reported using the following definitions.

Category	Description
Severity	**82** — Critical: An issue that renders the system or a major feature unusable, which can have a pervasive impact on the system or network, and for which there is no work-around acceptable to the customer. **83** — Major: An issue that affects the functionality of a major feature or negatively effects the network for which there exists a work-around that is acceptable to the customer. **84** — Minor: A cosmetic issue or an issue in a minor feature with little or no network impact for which there might be a work-around.
Synopsis	Synopsis is the title or short description of the issue.
Release Notes	Release Notes description contains more detailed information about the issue.
Work around	Work around describes a mechanism for circumventing, avoiding, or recovering from the issue. It might not be a permanent solution. Issues listed in the "Closed Caveats" section should not be present, and the work-around is unnecessary, as the version of code for which this release note is documented has resolved the caveat.

Known S6010-ON 9.14(2.14) Software Issues
The following caveats are open in Dell Networking OS version 9.14(2.14): **None**

Upgrading the ONIE Package for the S6010-ON System

NOTE: The Dell Networking OS installer package, ONIE-FTOS-SI-ON-9.14.2.14.bin, is required for installing Dell Networking OS on S6000-ON that has only ONIE.
e Zero touch (dynamic): Copy the update ONIE installer for your system to the TFTP/HTTP server. Configure the DHCP options using the ONIE specifications shown at the following link: **https://github.com/opencomputeproject/onie/wiki/**
Design-Spec-SW-Updating-ONIE.
o Manual: Copy the image onto the TFTP/HTTP servers and boot ONIE. Update the ONIE using the onie-self-update command, then download and run an ONIE updater image (onie-updater-x86_64-dell_s6010_c2538-r0). The supported URL types are: HTTP, FTP, TFTP, and FILE.
To upgrade ONIE, perform the following steps:

1. **Reboot the system. During the reboot process, the system displays the following message prompting**

   you to press the Esc key in order to stop the auto-boot process:

   Press Esc to stop autoboot …5

   Grub 2.02~beta2 (Dell EMC Inc)

   Built by root at ubuntu on Mon_Feb

   21 13:43:07_UTC_2022

   S6010 Boot Flash Label 3.26.2.10 NetBoot Label 3.26.2.10

2. **At this prompt message, press the Esc key. The following menu appears:**

   Grub 2.02~beta2 (Dell EMC Inc)

   Built by root at ubuntu on Mon_Feb

   21 13:43:07_UTC_2022

   Dell EMC Networking 0S

   Dell EMC-Boot Line Interface DIAG-OS

   * ONIE

   Use the and v keys to select which entry is highlighted.

   Press enter to boot the selected 0S, 'f' to boot FTOS, 'b' to go to

BLI, 'o' to boot ONIE, 'd' to boot DIAG-0S, 'e' to edit the commands before booting or 'c' for a command-line.

3. **From the menu, choose the ONIE option.**

ⓘ **NOTE:** To choose an option from the menu, highlight one of the options using the up or down arrow key and press Enter.

The following menu appears:

GNU GRUB version 2.02~beta2+edalfe39l

ONIE: Install OS

ONIE: Rescue

ONIE: Uninstall 0S

*ONIE: Update ONIE

ONIE: Embed ONIE

EDA- DIAG

Use the and v keys to select which entry is highlighted.

Press enter to boot the selected 0S, 'e' to edit the commands before booting or 'c' for a command-line.

4. **From this menu, choose the ONIE** : Update ONIE option.

ⓘ **NOTE:** To choose an option from the menu, highlight one of the options using the up or down arrow key and press Enter.

The ONIE update mode is enabled and the ONIE prompt appears, as shown:

ONIE: ONIE Update Mode version : 3.26.1.0-3

Build Date: 2022-02-21T22:35-0700

Info: Mounting kernel filesystems… done.

Info: Mounting LABEL=ONIE-BOOT on /mnt/onie-boot

Info: Using ethO MAC address: 14:18:77:09:72:00

Info: Using ethl MAC address: 14:18:77:09:72:01

Info: eth0: Checking link… up.

Info: Trying DHCPvV4 on interface: eth

DHCPV4 on interface: ethos failed ONIE: Using default IPv4 addr: ethO:

192.168.3.10/255.255.255.0

Info: ethl: Checking link… down.

ONIE: ethl: link down. Skipping configuration.

ONIE: Failed to configure ethl interface

Starting: drop bear ssh daemon done.

starting: telnetted… done.

discover: ONIE update mode detected. Running updater.

starting: discover… done.

Please press Enter to activate this console. To check the install status inspect /var/log/onie.log.

Try this: tail -f /var/log/onie.log

** ONIE Update Mode Enabled **

ONIE:/ # Info: ethO: Checking link… up.

Info: Trying DHCPvV4 on interface: eth

ONIE:/#

ONIE:/#

5. **At the ONIE prompt, to stop the ONIE discovery process, enter the following command:**

   ONIE:/# onie-discovery-stop

   The ONIE discovery stops, as shown:

   discover: ONIE update mode detected.

   Stopping: discover… done.

   ONIE:/#

6. **Configure an interface and assign an IP address to that interface using the following command:**

   ONIE:/ # ifconfig eth0 10.16.133.213/16

7. **Enter the following command to upgrade ONIE:**

   ONIE:/# onie-self-update tftp://<tftp-server-address>/onie-updater-x86_64-s6010_c2538-r0

   (i) **NOTE:** You must copy the onie-updater-x86_64-s6010_c2538-r0 file to the /t ftpboot folder in the server.

   ONIE is updated on the system, as shown:

```
discover: ONIE update mode detected.
Stopping: discover... done.
Info: Fetching tftp://10.16.127.35/onie-updater-x86_64-s6010_c2538-r0 ...

Upgrading the DIAG Package for the S6010-ON System

To upgrade the DIAG package, use one of the following two processes:

- Zero touch (dynamic): Copy the update ONIE installer for your system to the TFTP/HTTP server. Configure the DHCP options using the ONIE specifications shown at the following link: **https://github.com/opencomputeproject/onie/wiki/** Design-Spec-SW-Updating-ONIE.
- Manual: Copy the image onto the TFTP/HTTP servers and boot ONIE. Update the ONIE using the onie-self-update command, then download and run an ONIE updater image (diag-installer-x86_64-s6010_c 2538-r0.bin). The supported URL types are: HTTP, FTP, TFTP, and FILE.

To upgrade DIAG, perform the following steps:

1. Reboot the system. During the reboot process, the system displays the following message prompting you to press the Esc key in order to stop the auto-boot process:

```
Press Esc to stop autoboot ... 5
Grub 2.02~beta2 (Dell EMC Inc)
 Built by root at ubuntu on Mon_Feb_21_13:43:07_UTC_2022
 S6010 Boot Flash Label 3.26.2.10 NetBoot Label 3.26.2.10
```

2. At this prompt message, press the Esc key. The following menu appears:

```
Grub 2.02~beta2 (Dell EMC)
 Built by root at ubuntu on Mon_Feb_21_13:43:07_UTC_2022
 S6010-ON Boot Flash Label 3.26.2.10 NetBoot Label 3.26.2.10
 +----------------------------------------------------------------------+
 |Dell EMC Networking OS                                                |
 |Dell EMC-Boot Line Interface                                          |
 |DIAG-OS                                                               |
 |ONIE                                                                  |
 +----------------------------------------------------------------------+
      Use the ^ and v keys to select which entry is highlighted.
      Press enter to boot the selected OS, 'f' to boot Dell EMC Networking OS, 'b' to
 go to
      BLI, 'o' to boot ONIE, 'd' to boot DIAG-OS, 'e' to edit the commands
      before booting or 'c' for a command-line.
```

3. From the menu, choose the ONIE option.

   (i) **NOTE:** To choose an option from the menu, highlight one of the options using the up or down arrow key and press Enter.

   The following menu appears:

```
               GNU GRUB  version 2.02~beta2+e4a1fe391

 +----------------------------------------------------------------------+
 |*ONIE: Install OS                                                     |
 | ONIE: Rescue                                                         |
 | ONIE: Uninstall OS                                                   |
 | ONIE: Update ONIE                                                    |
 | ONIE: Embed ONIE                                                     |
 | EDA-DIAG                                                             |
 |                                                                      |
 |                                                                      |
 |                                                                      |
 |                                                                      |
 |                                                                      |
 |                                                                      |
 +----------------------------------------------------------------------+
  Use the ^ and v keys to select which entry is highlighted.
  Press enter to boot the selected OS, `e' to edit the commands
```

   before booting or "c" for a command-line.

4. **From this menu, choose the ONIE : Install OS option.**

   (i) **NOTE:** To choose an option from the menu, highlight one of the options using the up or down arrow key

and press Enter.

The ONIE Installer mode is enabled and the ONIE prompt appears, as shown:

```
GRUB loading.
Version   : 3.26.2.10
Build Date: 2022-02-21T18:15-0700

Installing Dell Networking OS on the S6010-ON using Install ONIE

(i) **NOTE:** You will need the Dell Networking OS installer package, O N I E – F T O S – S 6 0 1 0 – 9 . 1 4 . 2 . 1 4 . b i n to install the Dell Networking OS on your S6010-ON system that has only ONIE.
To install the Dell Networking OS version 9.14(2.14) on a new S6010-ON device, perform the following steps:

1. Reboot the system. During the reboot process, the system displays the following message prompting you to press the Esc key in order to stop the auto-boot process:

```
Press Esc to stop autoboot ... 5

Grub 2.02~beta2 (Dell EMC Inc)
Built by root at ubuntu on Mon_Feb_21_13:43:07_UTC_2022
S6010 Boot Flash Label 3.26.2.10 NetBoot Label 3.26.2.10
```

2. At this prompt message, press the Esc key. The following menu appears:

```
Grub 2.02~beta2 (Dell EMC Inc)
 Built by root at ubuntu on Mon_Feb_21_13:43:07_UTC_2022
 S6010-ON Boot Flash Label 3.26.2.10 NetBoot Label 3.26.2.10
 +-------------------------------------------------------------------------+
 |Dell EMC Networking OS                                                   |
 |Dell EMC-Boot Line Interface                                             |
 |DIAG-OS                                                                  |
 |ONIE                                                                     |
 +-------------------------------------------------------------------------+
      Use the ^ and v keys to select which entry is highlighted.
      Press enter to boot the selected OS, 'f' to boot Dell EMC Networking OS, 'b' to
go to
      BLI, 'o' to boot ONIE, 'd' to boot DIAG-OS, 'e' to edit the commands
      before booting or 'c' for a command-line.
```

3. From the menu, choose the O N I E option.

(i) **NOTE:** To choose an option from the menu, highlight one of the options using the up or down arrow key and press Enter.
The following menu appears:

```
                    GNU GRUB   version 2.02~beta2+e4a1fe391

 +---------------------------------------------------------------------------+
 |*ONIE: Install OS                                                          |
 | ONIE: Rescue                                                              |
 | ONIE: Uninstall OS                                                        |
 | ONIE: Update ONIE                                                         |
 | ONIE: Embed ONIE                                                          |
 | EDA-DIAG                                                                  |
 |                                                                           |
 |                                                                           |
 |                                                                           |
 |                                                                           |
 |                                                                           |
 |                                                                           |
 +---------------------------------------------------------------------------+
 Use the ^ and v keys to select which entry is highlighted.
 Press enter to boot the selected OS, `e' to edit the commands
 before booting or `c' for a command-line.
```

4. From this menu, choose the O N I E : I n s t a l l O S option.

ⓘ **NOTE:** To choose an option from the menu, highlight one of the options using the up or down arrow key and press Enter.

The ONIE Installer mode is enabled and the ONIE prompt appears, as shown:

```

Installation finished. No error reported.

discover: installer mode detected.  Running installer.
Starting: discover... done.

Please press Enter to activate this console. To check the install status inspect
/var/log/onie.log.
Try this:  tail -f /var/log/onie.log

** Installer Mode Enabled **
ONIE:/ #
ONIE:/ #
```

5. At the ONIE prompt, to stop the ONIE discovery process, enter the following command:

    ONIE: / # onie – discovery – stop

    The ONIE discovery stops, as shown:

    ```
    ONIE:/ # onie-discovery-stop
    discover: installer mode detected.
    Stopping: discover... done.
    ONIE:/ #
    ```

6. Configure an interface and assign an IP address to that interface using the following command:

    ONIE:/ # ifconfig eth0 10.16.133.213/16

7. Enter the following command to begin the installation process:

    ONIE:/ # onie-nos-install tftp://<tftp-server-address>/ONIE-FTOS-S6010-9.14.2.14.bin

    (i) **NOTE:** You must copy the ONIE-FTOS-S6010-9.14.2.14.bin file to the /tftpboot folder in the server.

    (i) **NOTE:** After the Dell Networking OS installation completes, the system automatically reboots.

    Following is the installation and boot log of Dell Networking OS:

    ```
    ONIE:/ # onie-nos-install tftp://10.16.127.35/ONIE-FTOS-S6010-9.14.2.14.bin
    discover: installer mode detected.
    Stopping: discover... done.
    ```

8. After the installation completes, the system displays the following DELL prompt:

   DellEMC#

Upgrade the S6010-ON Dell Networking OS Image and Boot Code using Dell Networking OS CLI

Bare Metal Provisioning
NOTE: If you are using Bare Metal Provisioning (BMP), see the Bare Metal Provisioning topic in the Dell Networking OS
Configuration Guide or the Open Automation Guide.
Manual Upgrade Procedure
Follow these steps carefully to upgrade your S6010‑ON systems:

1. Dell Networking recommends that you back up your startup configuration and any important files and

   directories to an external media prior to upgrading the system.

2. Upgrade the Dell Networking OS in flash partition A: or B:

   EXEC Privilege Mode

   upgrade system [flash: | ftp: stack-unit <1-6> | tftp: | scp: | usbflash:] [A: | B:]

```
DellEMC#upgrade system tftp: A:
Address or name of remote host []: 10.16.127.35
Source file name []: FTOS-S6010-9.14.2.14.bin
00:04:44 : Discarded 1 pkts. Expected block num : 51. Received block num: 50
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!........
............................................................................................
..........................................................................................
............................!
72268454 bytes successfully copied
System image upgrade completed successfully.
DellEMC#Feb 21 14:23:49: %STKUNIT1-M:CP %DOWNLOAD-6-UPGRADE: Upgrade completed
successfully
```

3. Verify that the Dell Networking OS has been upgraded correctly in the upgraded flash partition.

EXEC Privilege Mode show boot system stack-unit [1-6] | all]

```
DellEMC#show boot sys stack-unit all

Current system image information in the system:
=====================================================================
Type           Boot Type        A                               B
---------------------------------------------------------------------
stack-unit 1  FLASH BOOT       9.14(2.14)[boot]            9.14(2.12)
stack-unit 2 is not present.
stack-unit 3 is not present.
stack-unit 4 is not present.
stack-unit 5 is not present.
stack-unit 6 is not present.
DellEMC#
```

4. Upgrade the S6010-ON Boot Flash and Boot Selector images.

EXEC Privilege Mode

upgrade boot [all | bootflash-image | bootselector-image] stack-unit [1-6 | all] [booted | flash: | ftp: | scp: | tftp: | usbflash:

The Boot Flash and Boot Selector images can be upgraded together by selecting all in the command. If you want to upgrade Boot Flash image or Boot Selector image separately, use the bootless-image or the boots elector-image options separately. Use the booted option to upgrade the Boot flash and Boot Selector images to the image versions packed with the loaded Dell Networking OS image. You can find the Boot Flash and Boot Selector image versions packed with the loaded Dell Networking OS using the show os-version command in the EXEC PRIVILEGE mode. Dell #upgrade boot all stack-unit 1 booted

```
DellEMC#show os-version

Upgrading the CPLD

The S6010-ON system with Dell Networking OS Version 9.14(2.14) requires System CPLD revision 12, Master CPLD revision 12, and Slave CPLD revision 5.

Verify that a CPLD upgrade is required

Use the following command to identify the CPLD version:

```
DellEMC# show revision

--  Stack unit 1  --
S6010-ON SYSTEM CPLD     : 12

S6010-ON MASTER CPLD     : 12

S6010-ON SLAVE CPLD      : 5
```

Use the following command to view the CPLD version that is associated with the Dell Networking OS image:

```
Dell#show os-version

RELEASE IMAGE INFORMATION :

```

Upgrading the CPLD Image

NOTE: The upgrade fpga-image stack-unit
1 booted command is hidden when using the FPGA Upgrade feature in the CLI. However, it is a supported command and will be accepted when entered as documented.

NOTE: Ensure that the BIOS version is 3.26.0.0-4. You can verify this version using show system stack-unit 1 command.

To upgrade the CPLD image on S68010-ON, follow these steps.

1. Upgrade the CPLD image.

   EXEC Privilege Mode upgrade fpga-image stack-unit booted

```
DellEMC#upgrade fpga-image stack-unit 1 booted

Current information for the system:
======================================================================
  Card                      Device Name      Current Version    New Version
----------------------------------------------------------------------

  Unit1             S6010-ON MASTER CPLD             12              12
  Unit1              S6010-ON SLAVE CPLD              5               5

    **********************************************************************
    *   Warning - Upgrading FPGA is inherently risky and should          *
    *   only be attempted when necessary.  A failure at this upgrade may  *
    *   cause a board RMA.  Proceed with caution !                        *
    **********************************************************************

Upgrade image for stack-unit 1 [yes/no]: yes

FPGA upgrade in progress!!! Please do NOT power off the unit!!!
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
!!!!!!!!!!!!!!!!!!!!!!!!!!!

Upgrade result :
================
Unit 1 FPGA upgrade successful Unit 1. Please power cycle to take effect.

DellEMC#Feb 21 14:50:41: %S6010-ON:1 %DOWNLOAD-6-FPGA_UPGRADE: stack-unit 1 fpga
upgrade success.
```

2. Power cycle the system physically. Switch off the system by unplugging the power chords from the REAR
   PSUs and wait until the PSU FAN-REAR STATUS LED is completely OFF.

   ⓘ **NOTE:** Do not switch on the system with PSU-REAR LED glowing AMBER.

   You can alternatively power cycle the switch using the power-cycle stack-unit <1-6> command as follows:

   ```
   DellEMC#power-cycle stack-unit 1
   Proceed with power-cycle? Confirm [yes/no]:yes
   ```

3. The CPLD version can be verified using show revision command output:

   EXEC Privilege Mode

   show revision

   ```
   DellEMC#show revision

   --  Stack unit 1   --
   S6010-ON SYSTEM CPLD     : 12

   S6010-ON MASTER CPLD     : 12

   S6010-ON SLAVE CPLD      : 5
   ```

Uninstalling Dell Networking OS from the S6010-ON

To uninstall the Dell Networking OS version 9.14(2.14) from the S6010-ON device, perform the following steps:

1. Reboot the system. During the reboot process, the system displays the following message prompting you to
   press the Esc key in order to stop the auto-boot process:

   ```
   Press Esc to stop autoboot ... 5
   Grub 2.02~beta2 (Dell EMC)
    Built by root at ubuntu on Mon_Feb_21_13:43:07_UTC_2022
    S6010 Boot Flash Label 3.26.2.10 NetBoot Label 3.26.2.10
   ```

2. At this prompt message, press the Esc key. The following menu appears:

```
Grub 2.02~beta2 (Dell EMC)
 Built by root at ubuntu on Mon_Feb_21_13:43:07_UTC_2022
 S6100-ON Boot Flash Label 3.26.2.10 NetBoot Label 3.26.2.10
 +-------------------------------------------------------------------------+
 |Dell EMC Networking OS                                                   |
 |Dell EMC-Boot Line Interface                                             |
 |DIAG-OS                                                                  |
 |ONIE                                                                     |
 +-------------------------------------------------------------------------+
      Use the ^ and v keys to select which entry is highlighted.
      Press enter to boot the selected OS, 'f' to boot Dell EMC Networking OS, 'b' to
go to
      BLI, 'o' to boot ONIE, 'd' to boot DIAG-OS, 'e' to edit the commands
      before booting or 'c' for a command-line.
```

3. From the menu, choose the ONIE option.

ⓘ **NOTE:** To choose an option from the menu, highlight one of the options using the up or down arrow key and press Enter.

The following menu appears:

```
                    GNU GRUB   version 2.02~beta2+e4a1fe391

 +-------------------------------------------------------------------------+
 | ONIE: Install OS                                                        |
 | ONIE: Rescue                                                            |
 |*ONIE: Uninstall OS                                                      |
 | ONIE: Update ONIE                                                       |
 | ONIE: Embed ONIE                                                        |
 | EDA-DIAG                                                                |
 |                                                                         |
 |                                                                         |
 |                                                                         |
 |                                                                         |
 |                                                                         |
 |                                                                         |
 +-------------------------------------------------------------------------+

      Use the ^ and v keys to select which entry is highlighted.
      Press enter to boot the selected OS, `e' to edit the commands
      before booting or `c' for a command-line.
```

4. From this menu, choose the ONIE: Uninstall OS option.

ⓘ **NOTE:** To choose an option from the menu, highlight one of the options using the up or down arrow key and press Enter.

The uninstall process begins. Following is the log generated by the system while Dell Networking OS 9.14(2.14) uninstalls:

Support Resources

The following support resources are available for theS6010-ON system.

Documentation Resources

This document contains operational information specific to the SB010-ON system.

For information about using the S6010-ON, refer to the following documents at **http://www.dell.com/support**:

- Installing the S6010-ON System

- Quick Start Guide

- Dell Networking Command Line Reference Guide for the S6010-ON System

- Dell Networking Configuration Guide for the S6010-ON System

For more information about hardware features and capabilities, refer to the Dell Networking website at **https://www.dellemc.com/networking**.

For more information about the open network installation environment (ONIE)-compatible third-party operating system, refer to **http://onie.org**.

Issues

Issues are unexpected or incorrect behavior and are listed in order of Problem Report (PR) number within the appropriate sections.

Finding Documentation

This document contains operational information specific to the SB010-ON system.

- For information about using the S6010-ON, refer to the documents at **http://www.dell.com/support**.

- For more information about hardware features and capabilities, refer to the Dell Networking website at **https://www.dellemc.com/networking**.

- For more information about the open network installation environment (ONIE)-compatible third-party operating system, refer to **http://onie.org**.

Contacting Dell

ⓘ **NOTE:** If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

Go to **www.dell.com/support**.

Notes, cautions, and warnings

ⓘ **NOTE:** A NOTE indicates important information that helps you make better use of your product.

⚠ **CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

⚠ **WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.
