## Dell EMC PowerStore Setting Up PowerStore Manager

After completing the Initial Configuration Wizard (ICW), use this guide to configure your support settings and learn how to use the primary features of your system.

### Topics:

- [Configuration walkthrough](#)
- [Common tasks](#)
- [Additional Resources](#)

### Configuration walkthrough

#### Prerequisites

Log in to the PowerStore Manager with your browser using the IP address of the cluster.

 **NOTE:** You can log in with the Administrator (admin) account. The service user account cannot log in to PowerStore Manager.

#### About this task

It is recommended that you complete the following one-time setup activities for the best experience and take full advantage of your PowerStore system.

### Steps

1. [Configure support connectivity](#)

If you have already configured Support Connectivity from the ICW, you can skip this step.
2. [Provide contact information for remote support](#)

3. Configure storage network
4. Configure email and SMTP alert notification preferences
5. Enable CHAP
6. Enable SSH management
7. Enable HTTP Redirect

## **Next steps**

This guide also provides an overview of many common tasks you can perform on your PowerStore system.

- Customize table views
- Customize login message
- Add users
- GKJG
- Import data from external storage systems
- Create data protection policies
- Configure storage resources
- Configure host access
- Upgrading PowerStore software

## **Configure Support Connectivity**

To resolve problems more quickly and easily, enable Support Connectivity.

### **About this task**

For more information about Support Connectivity, including the benefits it provides and details about configuration types, see the context-sensitive help entry for this feature. For in-depth information about how this feature works, see the PowerStore Security Configuration Guide.

## **Steps**

1. Select the Settings icon, and then select Support Connectivity in the Support section.
2. Select the Connection Type tab.
3. Enable Support Connectivity.
4. If you would like to enable CloudIQ, keep the option selected.
5. Select the Support Connectivity configuration to use: Connect Directly or Connect via Secure Connect Gateway.

Depending on the type of configuration that is selected, different information is required.

6. Enter the information that is required for your configuration type.
7. Select whether you would like to enable Remote Support , then click Apply.

## **Results**

When Support Connectivity is enabled, you can click Send Test Alert to verify connectivit

## **Provide contact information for remote support**

To ensure that Support can contact you quickly in response to an issue, ensure that your contact information is accurate and

current.

## Steps

1. Select the Settings icon, and then select Support Connectivity in the Support section.
2. On the Support Contacts tab, enter your contact information details and then click Apply.

### Configure storage network

Configure the storage network for your cluster.

#### About this task

For detailed information for configuring storage networks, refer to the networking guide for your model.

## Steps

1. Select the Settings icon, and then select Network IPs in the Networking section.
2. On the Storage tab under Available Networks, click Create to launch the Create Storage Network wizard.
3. Enter the network details, then map each appliance as needed.

### Next steps

 **NOTE:** You can add up to 32 Storage networks per appliance. You can configure up to 8 networks on each port of the 4-port card.

### Configure email notification preferences

You can configure your system to send alert notifications through email using an SMTP server.

#### About this task

Use this procedure to configure an SMTP server and email recipients. For more information about SMTP server settings, see the context-sensitive help entry for this feature.

## Steps

1. Select the Settings icon, and then select SMTP Server in the Networking section.
2. To access the SMTP server settings, change the status to Enabled.
3. Add the SMTP server address and the email address that notifications should be sent from and click Apply.  
(Optional) Send a test email to verify that the SMTP server is set up correctly.
4. Select the Settings icon, and then select Email Notifications in the Users section.
5. To add email recipients, click Add in the Email Subscribers area and type the email address that you want to send alert notifications to.

When you add an address, you can select the severity level of the alert notifications that are sent to that address.

(Optional) To verify whether email addresses are entered correctly, select the target email addresses and then click Send Test Email.

### Configure CHAP authentication

Challenge Handshake Authentication Protocol (CHAP) authenticates iSCSI initiators (hosts) and targets (volumes and snapshots) to expose iSCSI storage while ensuring a secure, standard storage protocol. About this task

Without CHAP authentication, any host that is connected to the same IP network as the system iSCSI ports can read from and write to the system. If your system is on a public network, it is strongly recommended that you use CHAP authentication.

**NOTE:**

If you plan to use CHAP authentication, you must set up and enable CHAP authentication before preparing volumes to receive data. If you prepare drives to receive data before you set up and enable CHAP authentication, you could lose access to the volumes.

For more information about CHAP authentication, including the benefits that it provides and details about implementation types, see the context-sensitive help entry in PowerStore Manager.

For in-depth information about how this feature works, see the PowerStore Security Configuration Guide.

## Steps

1. Select the Settings icon, and then select CHAP in the Security section.

2. Enable CHAP authentication.

Additional configuration details are displayed

3. Select the type of CHAP implementation to use and click App

## Configure external SSH access

### about this task

To determine the status of SSH on appliances within a cluster, in the PowerStore Manager, click Settings and under Security select SSH Management.

**NOTE:**

For maximum appliance security, leave the external SSH service interface disabled unless it is needed to perform service operations on the appliance. After performing the necessary service operations, disable the SSH interface to ensure that the appliance remains secure.

For more information about SSH access, see the context-sensitive help entry for this feature. For in-depth information about how this feature works, see the PowerStore Security Configuration Guide.

## Steps

1. Select the Settings icon, and then select SSH Management in the Security section.

2. Select the appliance or appliances on which to enable SSH.

3. Click Enable SSH.

## Next steps

Once the SSH service has been successfully enabled, use any SSH client to log in to the appliance IP address. Accessing the appliance requires service user credentials.

The service account enables users to perform the following functions:

- Perform specialized appliance service scripts for monitoring and troubleshooting appliance system settings and operations.
- Operate only a limited set of commands that are assigned as a member of a nonprivileged Linux user account in restricted shell mode. This account does not have access to proprietary system files, configuration files, or user or customer data.

To disable SSH access, follow the same procedure, but click Disable SSH instead.

## Enable HTTP Redirect

## About this task

For security reasons, PowerStore does not support accessing the PowerStore Manager using the 'http' prefix. Instead, users can access the PowerStore Manager with the more secure 'https' prefix.

Enabling HTTP Redirect automatically redirects the browser session to 'https'.

## Steps

1. Select the Settings icon, and then select HTTP Redirect in the Security section.
2. Enable HTTP Redirect.

## Common tasks

### Customize table views in PowerStore Manager

Customize PowerStore Manager table views by selecting which columns to display, filter, and sort.

## Steps

1. To show or hide columns:
  - a. Select Show/Hide Table Columns.
  - b. Select the check boxes for the columns that you want to display, or clear the check boxes for columns that you do not want to display.  
Some columns with display by default and cannot be hidden.
  - c. Optionally, select the Autofit Columns option to automatically adjust the column widths to the size of the contents.
  - d. Optionally, use the Reset Columns options to return the columns back to the default view.
2. To filter tables:
  - a. Select the filter icon to display filters for a given table.
  - b. Select one of the available default filters that appear above the table columns, or select specific filters from the Add **Filters drop-down menu**.
  - c. Select Restore Default Filters to reset the table back to the default view.
3. To sort by multiple columns:
  - a. Press and hold the Shift key and select the column heading text for the first column by which you want to sort.

If a column has sorting applied, an arrow appears next to the column header. If no arrow is present in any column headers, the table is not sorted by a specific column and displays in the default order.

When a table is sorted by a column, the number 1 is displayed next to the column header in the table along with an up arrow, and the table is sorted by that column in ascending order. Clicking the column heading a second time sorts the table by that column in descending order, and a down arrow is displayed next to the column header.

- b. To sort by a second column, press and hold the Shift key and select the second column to sort by.  
The number 2 is displayed next to the column header in the table.
- c. Continue selecting columns to sort by as needed.
- d. To reset multi-column sort, click any column header.

For example, in the Volumes table view, if you hold Shift and select the Provisioned column, then Logical Used, then Name, the table sorts first by the Provisioned column value in ascending order numerically, then by the Logical Used value in ascending order numerically, then by the volume Name in ascending order alphabetically.

## Customize the login message

### About this task

The login message is displayed when the user logs in to the PowerStore system for compliance and security. The system administrator can provide a login message informing users on authorized and acceptable use of the system.

### Steps

1. Select the Settings icon, and then select Login Message in the Security section.
2. Enable Login Message (if not enabled)
3. Write the login message and click Apply.

### Add users

Add user accounts with specific roles and privileges for different management tasks. About this task PowerStore ships with a default admin account that has the Administrator role. Use this account to create additional accounts to enable user access. To grant users privileges to perform specific tasks, select the corresponding role for those actions.

For more information about user account types, roles, and privileges, see the context sensitive help entry for this feature. For in-depth information about how this feature works, see the PowerStore Security Configuration Guide.

### Steps

1. Select the Settings icon, and then select Users in the Users section.
2. Click Add.
3. In the Add User panel:
  - Enter a User Name.
  - Select a User Role for the account.
  - Enter a password in both password fields.
4. Click Apply.

### Import data from external storage systems

Use the Importing External Storage to PowerStore tool to import data from your existing supported storage systems.

You can import data from the following storage platforms to a PowerStore cluster:

- Dell EqualLogic Peer Storage (PS) Series
- Dell Compellent Storage Center (SC) Series
- Dell EMC Unity Series
- Dell EMC VNX2 Series
- XtremIO X1
- XtremIO X2
- PowerMax
- VMAX3
- NetApp

#### **Import of the following block storage resources is supported:**

- LUNs and volumes
- Consistency groups and volume groups

- Thin and thick clones
- VMFS datastores PowerStore 3.x supports import of file storage resources.

Before beginning the import process, ensure that you review the prerequisites and take necessary preconfiguration actions. For more information, see the context-sensitive help entry for this feature. For in-depth information about how this feature works, see the *PowerStore Importing External Storage to PowerStore Guide*.

## Create data protection policies

Use snapshot and data replication rules to protect your data.

### About this task

Snapshots are point-in-time copies of data that are stored in an application, volume, or volume group. You can take snapshots manually or configure the system to automatically take snapshots on a schedule with snapshot rules.

Data replication duplicates storage data to a remote system to protect against failure of the production storage system. To use data replication, you must create a remote system connection. You can configure the system to automatically start a replication session to meet a specified recovery point objective (RPO) with replication rules.

You can combine a replication rule with up to eight snapshot rules to create a protection policy for a storage resource. The protection policy automatically manages snapshots or replication operations according to the selected rules. You can apply a specific policy to a storage resource based on the business need or criticality of the data.

For more information about user snapshots, replication, and protection policies, see the context-sensitive help entries for these features. For in-depth information about how this feature works, see the *PowerStore Protecting Your Data Guide*.

### NOTE:

This workflow is a suggestion; the order that is shown is not required.

## Steps

1. Under Protection, select Protection Policies.
2. To configure a snapshot rule, click Snapshot Rules and then click Create.  
On the Create Snapshot Rule panel, enter a name for the rule and configure the settings that you want to use.
3. To configure a replication rule, click Replication Rules and then click Create.  
On the Replication Rule Properties screen, enter a name for the rule and configure the settings that you want to use.  
You can configure a remote replication destination from this screen.
4. To configure a protection policy, click Protection Policies and then click Create.  
On the Policy Properties screen, enter a name and description for the policy. Select the rules that you want to assign to the policy.  
You can configure new snapshot and replication rules from this screen

## Configure storage resources

PowerStore provides a unified platform on which multiple types of storage resources can be configured. To configure storage resources, click Storage, select the type of storage resource you want to configure, and then

click **Create** on the page for that resource type.

You can configure the following types of storage resources:

- Volumes
- Volume groups
- Storage containers
- File systems
- NAS servers

For more information about configuring storage resources, see the context-sensitive help entries for these resource types. For in-depth information about configuring and managing storage resources types, see the following PowerStore guides:

- PowerStore Configuring Volumes Guide
- PowerStore Configuring NFS Guide
- PowerStore Configuring SMB Guide

### **Configure host access**

To enable a host to access storage, define a configuration for the host and associate it with a storage resource.

#### **About this task**

For more information about hosts and host groups, see the context-sensitive help entries for this feature. For in-depth information about how to configure your hosts for connection, see the PowerStore Host Configuration Guide.

#### **Steps**

1. Under **Compute**, select **Host Information**.
2. To connect to a host, click **Add Host**.
3. Complete the steps in the **Add Host** wizard.

The host appears in the **Hosts and Host Groups** table.

4. To add hosts to a host group, click **Add Host Group**.

This option is only available if there are hosts that can be added to a host group.

5. Enter a name and description for the host group, select the hosts to include, and then click **Create**.

The host group appears in the **Hosts and Host Groups** table.

### **Upgrading PowerStore software**

For the latest features and improvements, upgrade to the latest available version of the PowerStore software. For instructions on upgrading PowerStore software, see the PowerStore Software Upgrade Guide.

### **Additional Resources**

PowerStore OS 3.0.0 only supports PowerStore T model clusters.

As part of an improvement effort, revisions of the software and hardware are periodically released. Some functions that are described in this document are not supported by all versions of the software or hardware currently in use. The product release notes provide the most up-to-date information about product features. Contact your service provider if a product does not function properly or does not function as described in this document.

## Where to get help

Support, product, and licensing information can be obtained as follows:

- **Product information**

For product and feature documentation or release notes, go to the PowerStore Documentation page at <https://www.dell.com/powerstoredocs>

- **Troubleshooting**

For information about products, software updates, licensing, and service, go to <https://www.dell.com/support> and locate the appropriate product support page.

- **Technical support**

For technical support and service requests, go to <https://www.dell.com/support> and locate the Service Requests page.

To open a service request, you must have a valid support agreement. Contact your Sales Representative for details about obtaining a valid support agreement or to answer any questions about your account.

## Online help

In PowerStore Manager, many features have dedicated help topics in the online help system. If context-specific help is available for the screen that you are viewing, a link to that help page appears above Online Help in the

 menu. You can access help topics from  > Online Help.

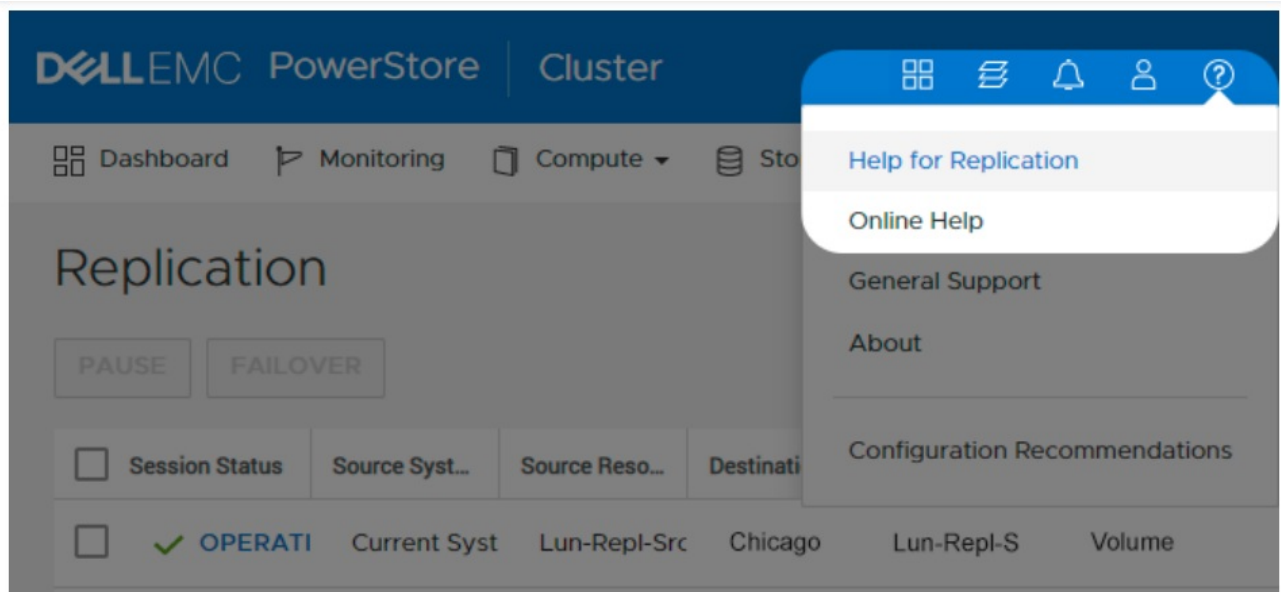

Figure 1. PowerStore Manager screen showing the specific help link for a feature

## Notes, cautions, and warnings

### NOTE:

A NOTE indicates important information that helps you make better use of your product.

### CAUTION:

A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**WARNING:**

A WARNING indicates a potential for property damage, personal injury, or death.
