Diymalls WS2812 Tutorial LED Ring User Manual

- PWR+5V to 5V
- GND to GND
- Data Input (or DI) to A6

Download library from https://github.com/adafruit/Adafruit_NeoPixel
You can open the standard test code

```
strandtest | Arduino 1.8.1
strandtest
1 #include <Adafruit_NeoPixel.h>
2
3 #define PIN 6
4
5 // Parameter 1 = number of pixels in strip
6 // Parameter 2 = Arduino pin number (most are valid)
7 // Parameter 3 = pixel type flags, add together as needed:
8 //   NEO_KHZ800  800 KHz bitstream (most NeoPixel products w/WS28
9 //   NEO_KHZ400  400 KHz (classic 'v1' (not v2) FLORA pixels, WS2
10 //   NEO_GRB     Pixels are wired for GRB bitstream (most NeoPixel
11 //   NEO_RGB     Pixels are wired for RGB bitstream (v1 FLORA pixels)
12 Adafruit_NeoPixel strip = Adafruit_NeoPixel(60, PIN, NEO_GRB + NEO_RGB);
13
14 // IMPORTANT: To reduce NeoPixel burnout risk, add 1000 uF capacitor
15 // pixel power leads, add 300 - 500 Ohm resistor on first pixel's
16 // and minimize distance between Arduino and first pixel. Avoid
17 // on a live circuit...if you must, connect GND first.
18
19 void setup() {
20   strip.begin();
21   strip.show(); // Initialize all pixels to 'off'
22 }
23
24 void loop() {
25   // Some example procedures showing how to display to the pixels
26   colorWipe(strip.Color(255, 0, 0), 50); // Red
27   colorWipe(strip.Color(0, 255, 0), 50); // Green
```

Please pay attention about the LED numbers, if it is 24LED, you need change 60 to 24

```
//   NEO_RGB     Pixels are wired for RGB bitstream (v1 FLORA pixels)
Adafruit_NeoPixel strip = Adafruit_NeoPixel(60, PIN, NEO_GRB + NEO_RGB);
```
