Compliance list

INTEGRATION INSTRUCTIONS for 996369 D03 OEM the and 996369 D03 OEM by

Requirement	Yes	N/A	Comment
List the FCC rules that are applicable to the modular transmitter. These are the rules that specifically esta blish the bands of operation, the power, spurious e missions, and operating fundamental frequencies. D O NOT list compliance to unintentional-radiator rules (Part 15 Subpart B) since that is not a condition of a module grant that is extended to a host manufacture r. See also Section 2.10 below concerning the need to notify host manufacturers that further testing is re quired.3	YES		Refer to instruction FCC standards: FCC CFR Title 4 7 Part 15 Subpart E Section 15.407: 2016 and FCC CFR Title 47 Part 15 Subpart C Section 15. 247
Summarize the specific operational use conditions Describe use conditions that are applicable to the m odular transmitter, including for example any limits on antennas, etc. For example, if point-to-point antennas are used that require reduction in power or compensation for cable loss, then this information must be in the instructions. If the use condition limitations extend to professional users, then instructions must state that this information also extends to the host manufacturer's instruction manual. In addition, certa in information may also be needed, such as peak gain per frequency band and minimum gain, specifically for master devices in 5 GHz DFS bands.	YES		Refer to instruction The module is limited to the follow ing antenna: Antenna Type: Exter nal Antenna Antenna Gain: ANT0: 3dBi ANT1: 3dBi ANT2: 3d Bi

Limited module procedures

If a modular transmitter is approved as a "limited mo dule," then the module manufacturer is responsible f or approving the host environment that the limited m odule is used with. The manufacturer of a limited mo dule must describe, both in the filing and in the instal lation instructions, the alternative means that the lim ited module manufacturer uses to verify that the hos t meets the necessary requirements to satisfy the m odule limiting conditions.

A limited module manufacturer has the flexibility to d efine its alternative method to address the condition s that limit the initial approval, such as: shielding, mi nimum signaling amplitude, buffered modulation/dat a inputs, or power supply regulation. The alternative method could include that the limited module manuf acturer reviews detailed test data or host designs pr ior to giving the host manufacturer approval.

This limited module procedure is also applicable for RF exposure evaluation when it is necessary to demonstrate compliance in a specific host. The mod ule manufacturer must state how control of the prod uct into which the modular transmitter will be installe d will be maintained such that full compliance of the product is always ensured. For additional hosts othe r than the specific host originally granted with a limit ed module, a Class II permissive change is required on the module grant to register the additional host a s a specific host also approved with the module.

No

Trace antenna designs

For a modular transmitter with trace antenna design s, see the guidance in Question 11 of KDB Publicati on 996369 D02 FAQ – Modules for Micro-Strip Ante nnas and traces. The integration information shall in clude for the TCB review the integration instructions for the following aspects: layout of trace design, part s list (BOM), antenna, connectors, and isolation req uirements.4

- a) Information that includes permitted variances (e.g., trace boundary limits, thickness, length, width, sha pe(s), dielectric constant, and impedance as applica ble for each type of antenna);
- b) Each design shall be considered a different type (e.g., antenna length in multiple(s) of frequency, the wavelength, and antenna shape (traces in phase) c an affect antenna gain and must be considered);
- c) The parameters shall be provided in a manner pe rmitting host manufacturers to design the printed cir cuit (PC) board layout;
- d) Appropriate parts by manufacturer and specifications;
- e) Test procedures for design verification; and
- f) Production test procedures for ensuring compliance. The module grantee shall provide a notice that any deviation(s) from the defined parameters of the antenna trace, as described by the instruction s, require that the host product manufacturer must notify the module grantee that they wish to change the antenna trace design. In this case, a Class II permissive change application is required to be filed by the grantee, or the host manufacturer can take responsibility through the change in FCC ID (new application) procedure followed by a Class II permissive change application.

NO

RF exposure considerations

It is essential for module grantees to clearly and explicitly state the RF exposure conditions that perm it a host product manufacturer to use the module. T wo types of instructions are required for RF exposur e information: (1) to the host product manufacturer, t o define the application conditions (mobile, portable – xx cm from a person's body); and (2) additional te xt needed for the host product manufacturer to provi de to end users in their end-product manuals. If RF exposure statements and use conditions are not pro vided, then the host product manufacturer is require d to take responsibility of the module through a change in FCC ID (new application).

Yes

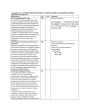

Refer to instruction

The modular can be installed or in tegrated in mobile or fix devices o nly. This modular cannot be install ed in any portable device. This m odular complies with FCC RF radi ation exposure limits set forth for an uncontrolled environment. This transmitter must not be co-lo cated or operating in conjunction with any other antenna or transmitter. This modular must be installe d and operated with a minimum di stance of 20 cm between the radi ator and user body.

Antennas A list of antennas included in the application for certification must be provided in the instructions. For modular transmitters approved as limited modules, all applicable professional installer instructions must be included as part of the information to the host product manufacturer. The antenna list shall also identify the antenna types (monopole, PIFA, dipole, etc. (note that for example an "omni-directional antenna" is not considered to be a specific "antenna type")). For situations where the host product manufacturer is responsible for an external connector, for example with an RF pin and antenna trace design, the integration instructions shall inform the installer that unique antenna connector must be used on the Part 15 authorized transmitters used in the host product. The module manufacturers shall provide a list of acc eptable unique connectors.	Yes	Refer to instruction The module is limited to the follow ing antenna: Antenna Type: Exter nal Antenna Antenna Gain: ANT0: 3dBi ANT1: 3dBi ANT2: 3d Bi
Label and compliance information Grantees are responsible for the continued compliance of their modules to the FCC rules. This i ncludes advising host product manufacturers that th ey need to provide a physical or e-label stating "Con tains FCC ID" with their finished product. See Guidelines for Labeling and User Information for RF Devices – KDB Publication 784748.	Yes	Refer to instruction If the FCC ide ntification number is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains Transmitter Module FCC ID: 2 AG87NM-DB-3M Or Contains FC C ID: 2AG87NM-DB-3M"

Information on test modes and additional testing requi rements5 Additional guidance for testing host products is give Refer to instruction n in KDB Publication 996369 D04 Module Integratio Any company of the host device n Guide. Test modes should take into consideration which installs this modular with un different operational conditions for a stand-alone mo limited modular approval should p dular transmitter in a host, as well as for multiple sim erform the test of radiated & cond ultaneously transmitting modules or other transmitte ucted emission and spurious emis rs in a host product. sion, etc. according to FCC part 1 The grantee should provide information on how to c 5C: 15.247 and 15.407 and onfigure test modes for host product evaluation for d Yes 15.209 & 15.207, 15B Class B re ifferent operational conditions for a stand-alone mod quirement, only if the tests result ular transmitter in a host, versus with multiple, simul comply with FCC part 15C: 15.24 taneously transmitting modules or other transmitters 7 and 15.407 and 15.209 & 15.20 in a host. 7, 15B Class B requirement, then Grantees can increase the utility of their modular tra the host can be sole legally. The nsmitters by providing special means, modes, or ins module is installed in the host and tructions that simulates or characterizes a connectio can be transmitted independently. n by enabling a transmitter. This can greatly simplify a host manufacturer's determination that a module a s installed in a host complies with FCC requirements. Additional testing, Part 15 Subpart B disclaimer The grantee should include a statement that the mo dular transmitter is only FCC authorized for the spec ific rule parts (i.e., FCC transmitter rules) listed on th Refer to instruction e grant, and that the host product manufacturer is re sponsible for compliance to any other FCC rules tha The module is installed in the Yes host, and the host must be evalua t apply to the host not covered by the modular trans mitter grant of certification. If the grantee markets th ted to comply with Part 15 Subpar eir product as being Part 15 Subpart B compliant (w t B requirements. hen it also contains unintentional-radiator digital circ uity), then the grantee shall provide a notice stating t hat the final host product still requires Part 15 Subpart B compliance testing with the modular trans mitter installed.6
