REPLACING THE D21X KEYPAD MODULE WITH 12 KEYS
INSTALLATION D21X KEYPAD MODUL MIT 12 TASTEN

Before replacing the keypad the existing cable connection has to be removed.

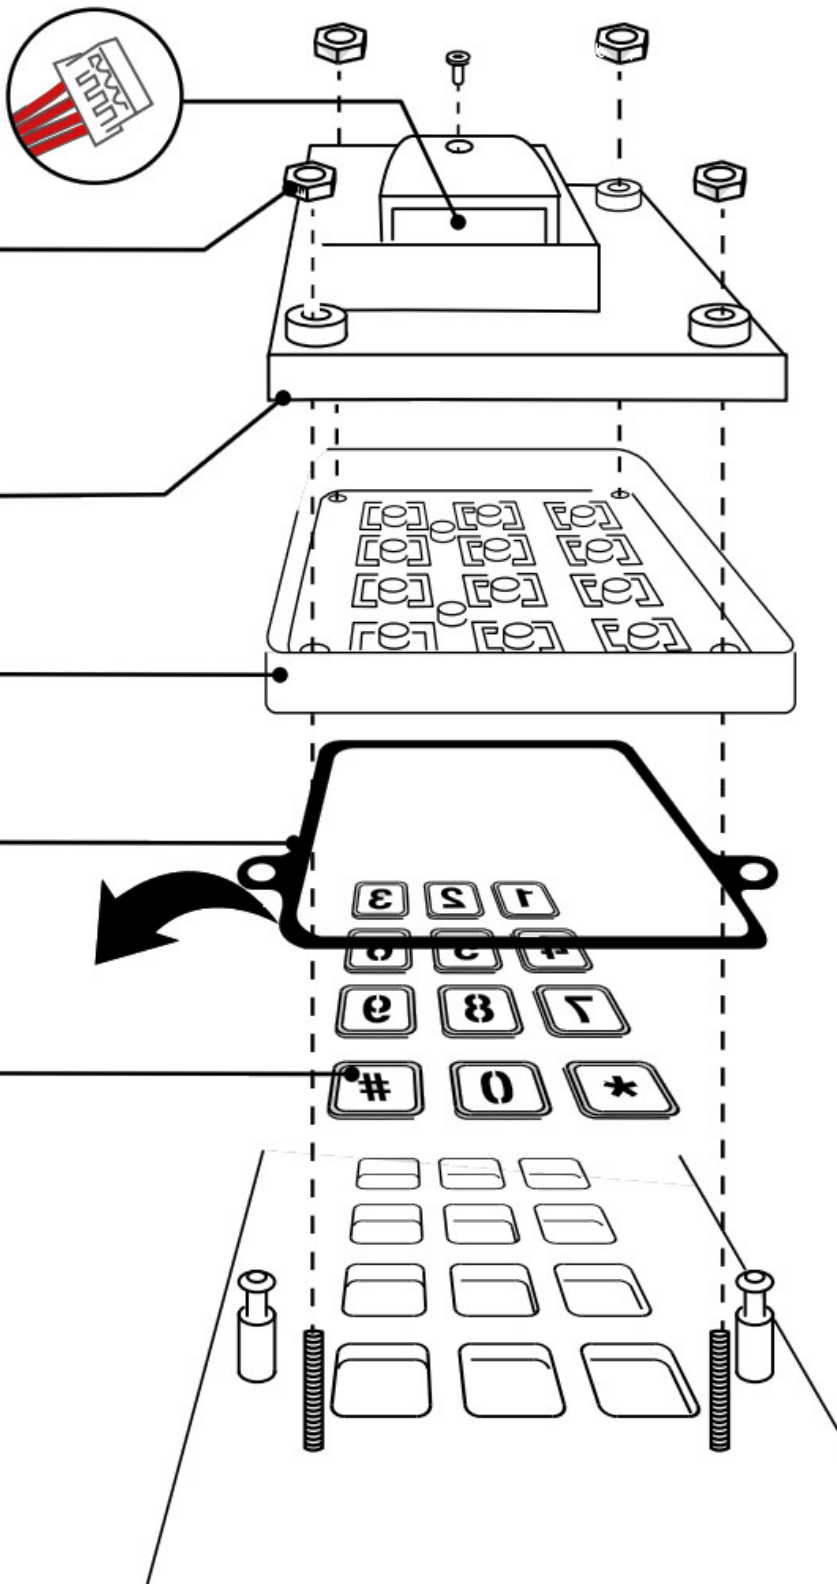

1. Loosen the four nuts and the screw of the keypad protective housing.

2. Remove the keypad protective housing.

3. Replace the transparent rubber seal.

4. If existing, remove the the black rubber seal.

5. Replace the keypad buttons.

For a smooth keystroke, tighten the fastening nuts on the keypad only hand-tight and then loosen them by half a turn. If a single key cannot be pressed correctly, the nearby nut has been tightened too much.
