Connection Modes: USB-C/BT/2.4G

Schematic Diagram

Instructions

1. Connect with USB-C cable.
2. Click "Key1"~ Click"Ctri" Click "C"~ Ciick"Download"

3. Click "K1 Right-Click "Multimedia"- Click "Volume+" – Click "Download"

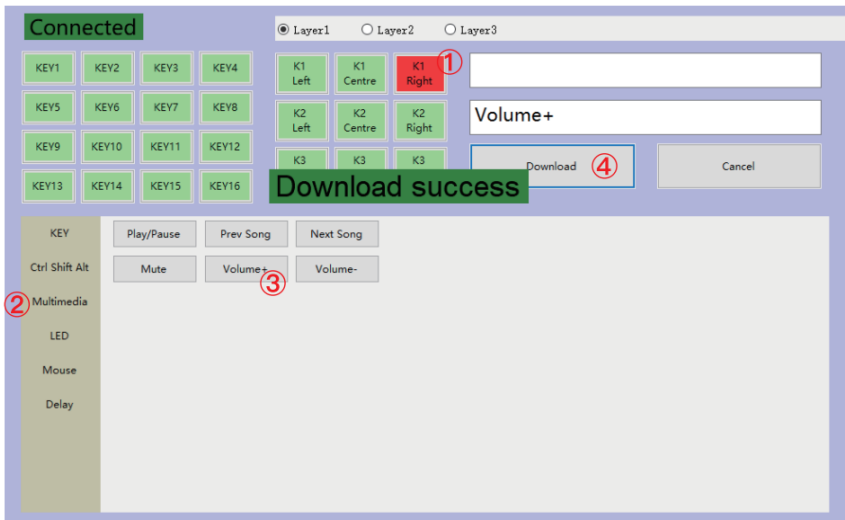

Layer function

Toggle the layer switch to set the corresponding layer function. (3 sets of different layer functions can be set)

BT connection

Turn on the BT switch, search for "Mini Keyboard in the list of BT devices then connect. (with 2.4G receiver is more stable)

BT Switch
<--Off--On-->

1. If the BT pairing is not successful, please turn on and off the keyboard and search for pairing again,

2. The keyboard will automatically enter the "sleep" mode if there is no operation for 15 minutes. At this time, the keyboard has no functional response in the sleep state. Press key "1" can wake up the keyboard to enter the "work" mode, which takes about 2 seconds to complete, and automatically connect.

Q&A

Question: Why is there no response when I connect to the computer and press the buttons?

Answer: After connecting to the computer for the first time, the system will automatically install the USB driver, just wait for the installation to complete

Question: How to reset the redefinition after the small keyboard is set?

Answer: No need to reset, just reset the new function directly, it will automatically overwrite the last setting and save it on the keypad.

Question: Why is there an error prompt that the download cannot be downloaded when setting the function?

Answer: Change the USB interface of the computer, close the setting software, and open it again to solve the problem.

Question: Why does the computer respond slowly after setting the multimedia function, and the volume of the sound cannot be controlled?

Answer: After setting, close the setting software.

Question: Is the Mac Apple system available?

Answer: Yes, as long as the system supports the USB keyboard, it can be used. First, it must be installed in the Windows system. Set it up first, Win-Command key, Alt-Option. For example, the copy of the Mac system is: Command+C, just set Win+C when setting the Win system.

Question: Why can't I open the setup software after downloading it?

Answer: Check whether the anti-virus software is intercepted and run, and set it as a trusted file to run it.

Question: Why is there no functional response when the keyboard is not used for a period of time?
