Fn+Left Arrow	Spectrum Speed-

How to use

Change switches and keycaps
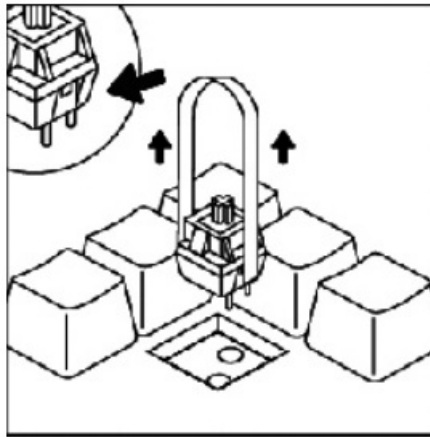

1. **Remove keycap**
   Use the keycap puller fool to clamp on a keycap and pull upwards to detach keycap from switch. Sometimes the switch may come out as well if the keycap is secured tightly on switch, which is normal. For longer keys such as the space bar, always clamp and remove from the MIDDLE of the keycap.

2. **Remove switch**
   Use the switch puller to push in the two tabs located on the top and bottom side of the switch. Once they are pushed in, pull upwards to remove switch from keyboard case.
   **Warning:** It is very easy to scratch your keyboard case with this tool, so take caution when removing switches!
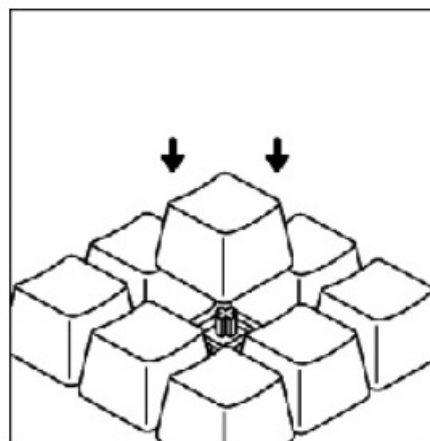

3. **Insert switch**

   When inserting a new switch, align switch to holes on the keyboard, and insert straight down. There should be minimal resistance and the switch should pop into the frame of the keyboard. It is recommended at this time to have a Notepad ready on your PC, open it and make sure the switch works when you press it. If the switch does not light up, or the key doesn't show up on your PC when you press it, then the switch was not inserted properly. Remove switch, and make sure pins are straight then insert again.

   Note: It is safe to swap switches while your keyboard is plugged in to your PC

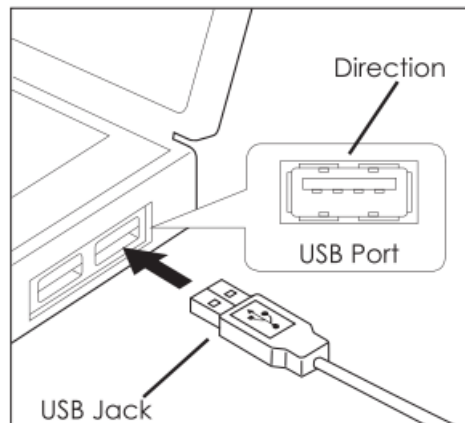

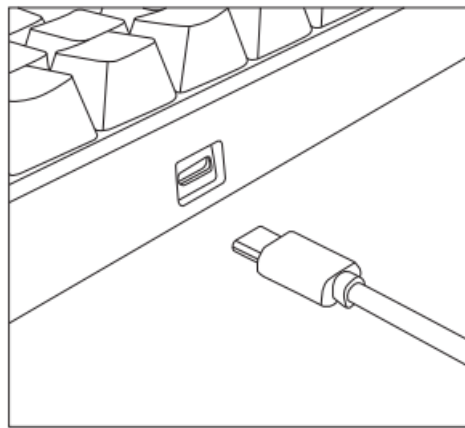

4. Insert keycap

   Once you have confirmed the switch was properly inserted, snap back in the appropriate keycap.

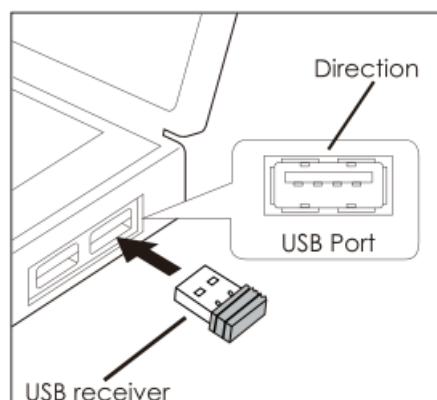

How to connect

- Plug in the Type-C cable to the keyboard, then connect the keyboard to computer by inserting USB jack to your

computer USB port. Press FN+T 3s to activate wired mode, after it connects the white indicator will light.

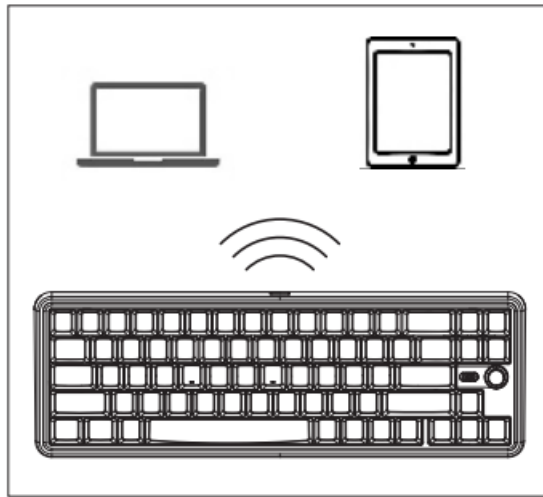

- **StrikeSpeed Mode:**

Plug in the USB receiver to the computer USB port. Press FN+4 to activate StrikeSpeed mode, after it connects, the white indicator will light. If it doesn't connect in 30 sec, the indicator light stop flashing and the keyboard enter sleep mode.

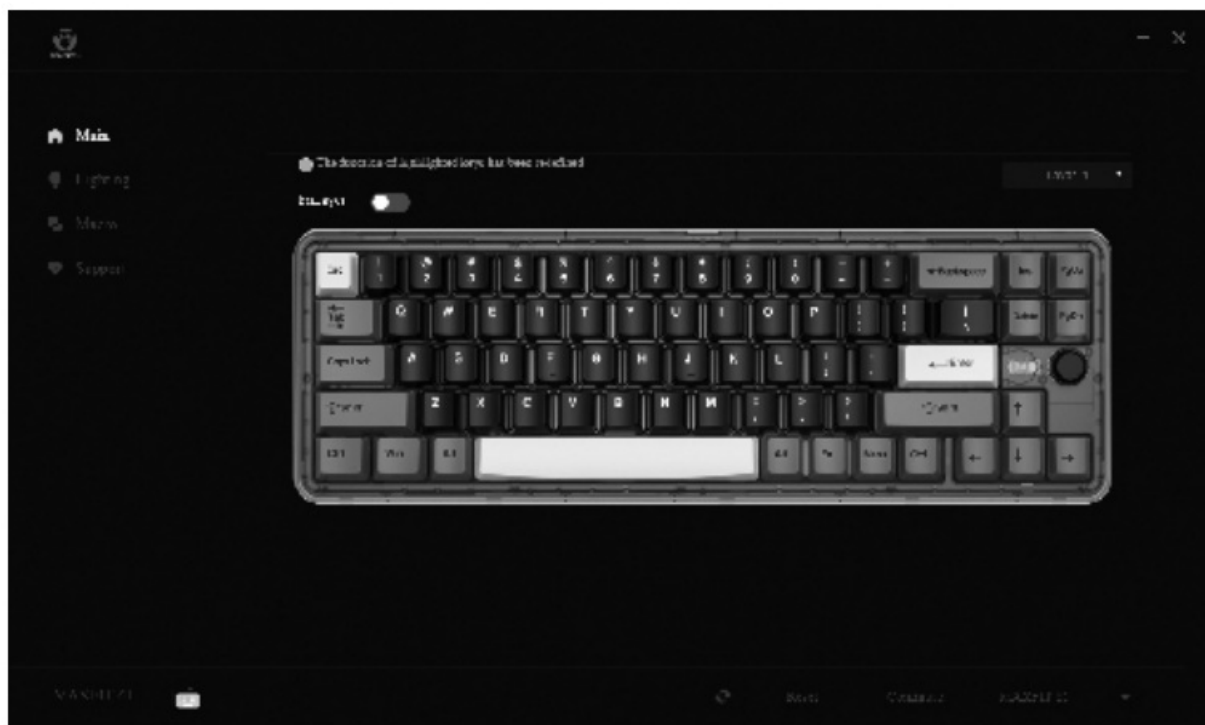

- **BT Mode:**

Maxfit70 can connect up to 3 BT devices simultaneously via combination key, connect the BT by hold FN+Q / FN+W/ FN+E for 5 seconds. Then, navigate to your devices BT settings, and begin the pairing process. In pairing process the indicator will keep flashing. After connected the indicator will always light.

Download our Manual / Software from our official website www.fantechworld.com

SOFTWARE

- **Main**
