**FAQs High Speed Internet Change Your Wi-Fi Settings**

## High-Speed Internet Change your Wi-Fi settings

To change the wireless settings in your modem/gateway, we recommend connecting a laptop or PC directly to the modem with an Ethernet cable into one of the four yellow jacks on the back of the modem/gateway. Once connected, open your web browser and visit the following address: <http://192.168.1.254> To log in you will need the security code, or security access code, which is written on the back of the modem. Please note that this is different than the wifi password which is also written on the back of the modem. Once logged in you can click on the wifi/wireless menu to access wireless settings, including:

### Enable or disable wifi

- Change the wireless network name or password
- Change the wireless channel or frequency
- Other miscellaneous wifi settings
