Pre-installation

Installation must conform to applicable local installation codes and should only be installed by a fully trained competent person.

- Ensure that the device is installed as per the site survey.
- The use of a non-metallic spacer should be considered if mounting the device on to a metal surface.
- Do NOT Press the Log On button on a pre-programmed device, as this will cause communication with the Control Panel to be lost. Should this happen, delete the device from the system and add it back on.
- This device contains electronics that may be susceptible to damage from Electrostatic Discharge (ESD). Take appropriate precautions when handling electronic boards.
Components

1. Dust cover
2. Detector
3. Wireless module
4. Mounting plate
Fix mounting plate

Remove the mounting plate by turning the device ANTICLOCKWISE, to release it from the mounting plate.

- Use both mounting holes to ensure a firm fixing.
- Use suitable fasteners and fixings.

Power device

- When fitting / replacing batteries; observe correct polarity, using only specified batteries.
- Set switch 1 to the ON position to power the device. See the configuration section for other available switch settings.

- Once powered, reassemble the device.

Optional device locking

- To lock the detector into the wireless module, remove the cut out (shaded) section as shown.

- To unlock the detector, insert a 1.5 mm Allen key and lever the Allen key towards the outside of the device and turn the detector anticlockwise to release.

- The wireless module can also be locked into the mounting plate by removing the shaded section shown and fitting a 5/16 Phillips pan head screw.

Configuration

The device's loop address is configured within the user interface's menu structure.

- Refer to the programming manual for full programming details.
