### **CHANGE HISTORY**

REV	DATE	DCO#	ORIGINATOR	CHANGE DESCRIPTION
A	2/6/2013		MK/LT	Initial Release
В	3/17/2017		FH	Added FCC notice, antenna info and labelling guidance
С	8/16/2017		FH	Update information for RFID reader (box)
D	10/20/2017		FH	Updated labelling guidance
F	10/7/2017		Molly	Update the labelling guidance Add RET-200 specification and layout Update the pictures.

# **FCC NOTICE**

# **Federal Communications Commission Statement**

device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- (a) Reorient or relocate the receiving antenna.(b) Increase the separation between the equipment and receiver.
- (c) Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. (d) Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

### **Labelling Guidance**

The following information must be indicated on the host incorporating this device: [For FCC]

**Contains Certified Transmitter FCC ID: 2ALBARFIDMODULEV20** 

OR

Contains FCC ID: 2ALBARFIDMODULEV20

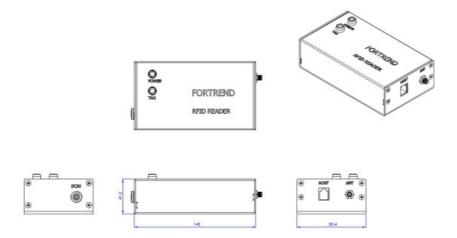

Proprietary Note: This document contains confidential information proprietary to Fortrend Engineering, any disclosure or unauthorized use is prohibited

### **RFT-200**

### 1.1 Specification

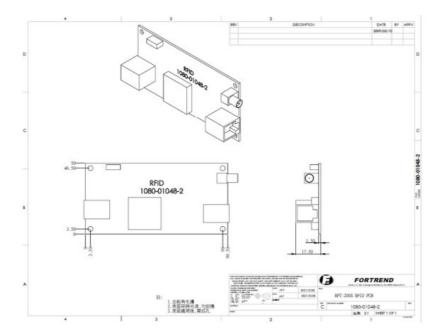

Operating Frequency	134.2KHz
Protocol Standard	ü FORTREND HEX PROTOCOL ü SECS PROTOCOL
Dimension	145×82.4×41.2 mm (Main Board:99.5x 50mm)
Supply Voltage	Regulated 5V DC

Supply Current	Max. 100mA
Operating Temperature	-10°C to +60°C
Weight	10 g
Antenna	Ø11mm, L:4.7cm(Assemble),cable RG174u 100cm.(440uH)
Operating Distance	Read:90mm Write:50mm
Host Interface	RS232 (RJ12 CONNECTOR P1)
Transponders	RI-TRP-DR2B-40
Certificate	

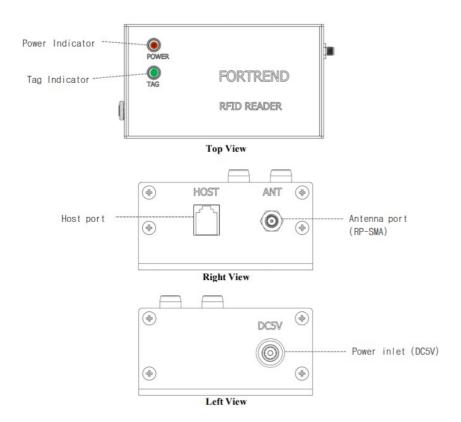

Proprietary Note: This document contains confidential information proprietary to Fortrend Engineering, any disclosure or unauthorized use is prohibited.

# 230-024802-001

### 1.3 Label

The label is as shown in the figure below, including the model name and FCC ID

### **Firmware**

### 1.4 Firmware

Firmware used is RFT-200S-3\_SECS\_V1.6, which was designed for 3 channel system, but it is used here for conformance with other products with single channel.

### **Antenna**

### 1.5 Antenna Specification

The antenna connects to radio frequency module (RFM) and reader/writer to form the interface to the low frequency (LF) 134.2kHz TI transponder. The RFID modules transmit energy and signal to the transponder and receive the response from the tag. The stick antenna has custom cable length to meet the requirement of application.

PARAMETER	PART NUMBER	
PANAIVIETEN	1A01-E0103-1	
Type (Gain)	Ferrite rod, Linear polarized (7.5dBi)	
Inductance	Typically 27μH @ 134.2kHz	
Case material	Heat shrink tubing	
Dimension	Φ6mm x 38mm long	
Weight	86g	
Cable Length	1m (or custom length)	
Connection type	Coaxial connector RP-SMA straight plug	
Option	Antenna Cover(1A05-A0403-1)	

Any change in antenna type or increase in antenna gain over that which was tested, will require additional testing and an FCC permissive change application before it can be used

# **Use CtrlReader Program**

1.6 Single Channel

### 1.6.1 Hardware Setup

On site and completed system

1. Connect DB9 cable to the serial port between the tool interface panel and computer.

Serial port at interface panel

In Lab

1. Connect the testing DB9 cable and power supply as picture shown below.

2. Hook up communication cable and antenna on the RFID reader.

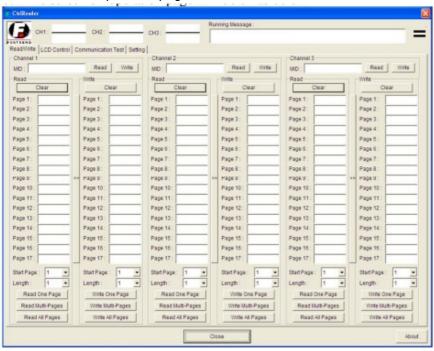

- 3. Connect the DB 9 cable to the computer and plug the power supply to the power source.
- 4. Red light "Power" indicator on the top of the RFID Reader should be "ON" if all connection is correct and ready to run testing.
- 5. Green light "TAG" indicator should be "ON" during the tag reading or writing.

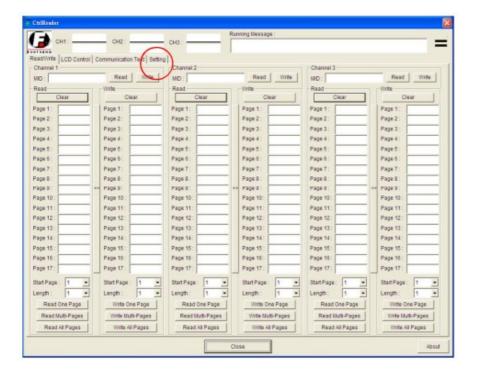

### 1.6.2 Start CtrlReader

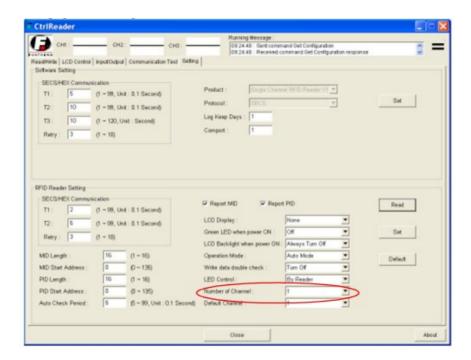

- a. Open operation software "CtrlReader.exe".
- b. The screen of operation page will be on as below

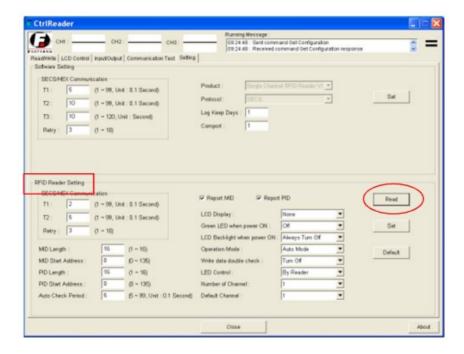

c. Click the "Setting" icon on the tool bar

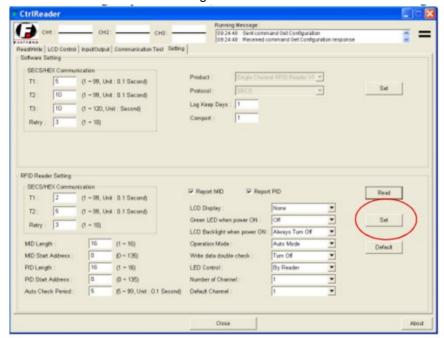

The page of "Setting "should be on as below.

d. Click "Read" icon in order to check the default setting of RFID board.

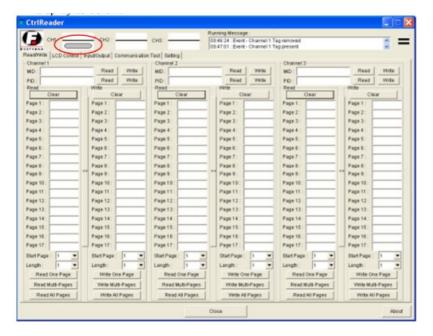

e. If the setting is not correct or not match to the customer's specification, make a change at particular item, and then click "Set " to save all changes.

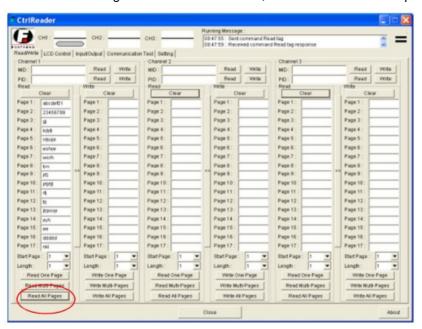

### 1.6.3 Read/Write Demo

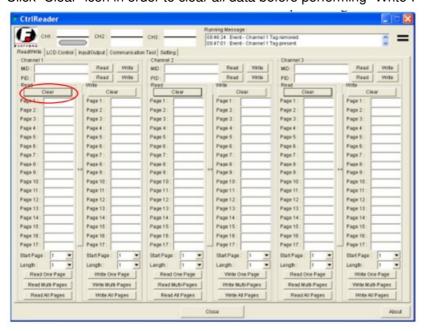

- 1. Click the icon "Read/Write" in order to test the RFID reader.
- 2. Place tag next to the antenna, the status of channel would indicate and display as below.

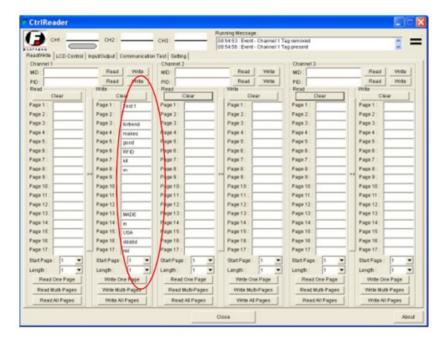

3. Click "Read All Pages" icon on Channel "1", the channel should display data on box of each page.

4. Click "Clear" icon in order to clear all data before performing "Write".

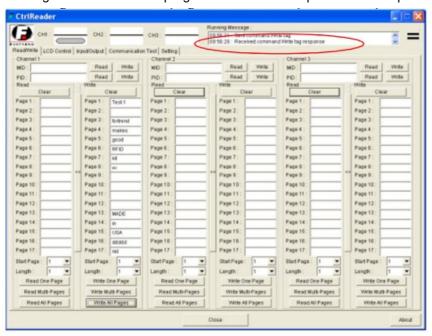

5. Type new data on the box of 'Write' from page 1 to page 17 at channel "1"

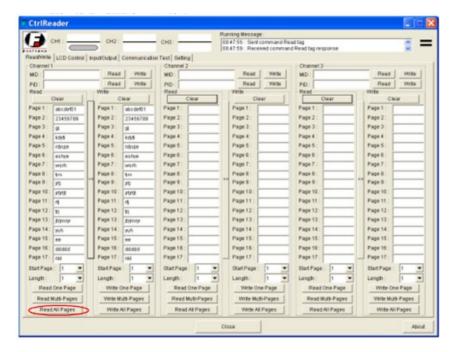

6. Click "Write All Pages", and wait for "Running Message" response- "Received command Write Tag response" that should be shown at "Running

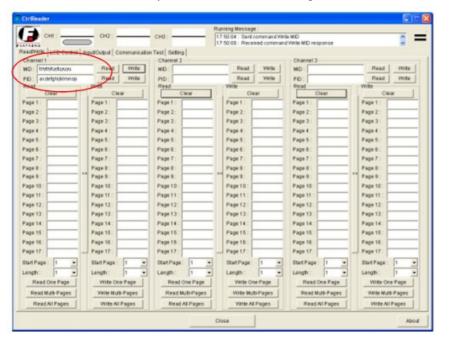

Message" window at the top right corner when the process is completed.

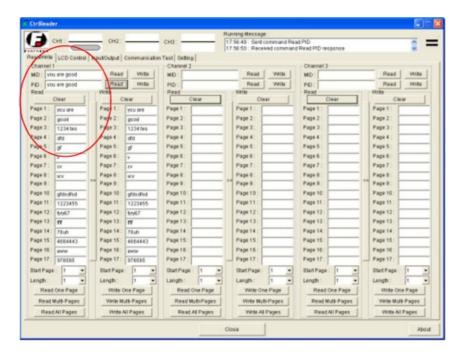

7. Click "Read All Page" in order to verify the new data, those should be match to all data of "write".

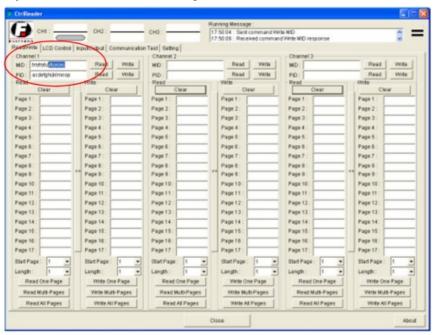

8. OR, individually click 'Read" icon on channel "MID" or "PID", box of MID or PID should show data if "Report the MID" and "Report the PID" is activated on the initial setting. "MID" and "PID" only read/write max 16 character from address 0 to 135 depends on the initial setting.

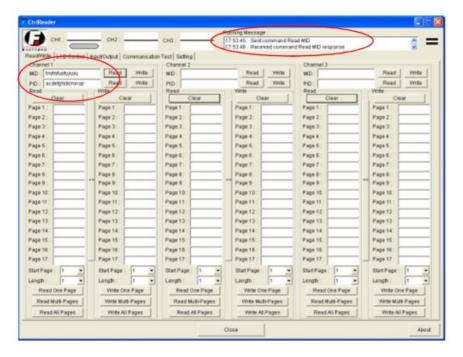

Note: Compare style of reading data between "MID & PID" and all pages. If both of initial setting of MID and PID are same.

9. there are no "clear" button to perform clear old data at the box of "MID" and "PID"; using "delete" button on keyboard to clear old data during test "Read" or "Write".

- 10. Type new data on the box of "Write", and then click the "Write "icon. Wait for the response message from the "Running Message" window, as same as step "6".
- 11. Click the "Read" icon, the "WRITTEN" data disappear a second (if not clear all data after processing "write"), and show the data again. Those data should be match.)

12. Continue to test few times to make sure that is no error

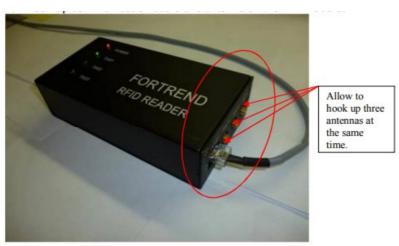

### 1.7 Multi Channel

### 1.7.1 Hardware Setup

1. Connect the testing DB9 cable and power supply to the RFID as picture shown below.

2. Hook up communication cable and antenna on the RFID board.

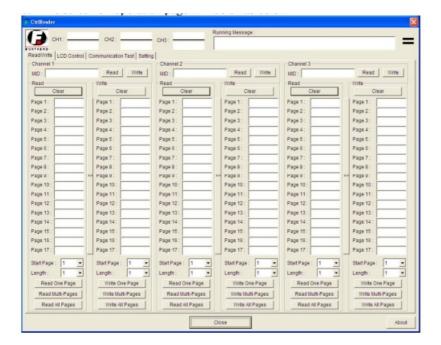

- 3. Connect the DB 9 cable to the computer and plug the power supply to the power source.
- 4. Red light "Power" on the top of reader should be "ON", and three green lights are cycle "ON" through TAG 1 to TAG 3.if the connection is correct and ready to run testing.

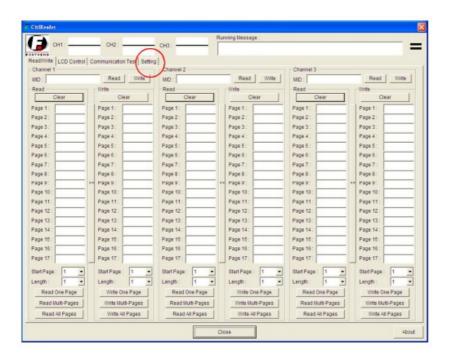

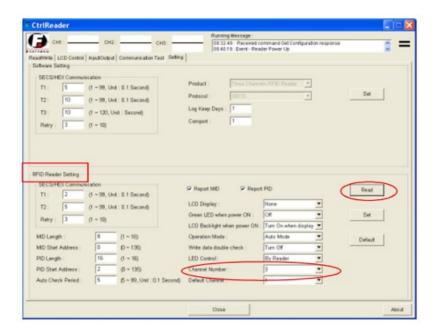

### 1.7.2 Start CtrrlReader

- a. Open operation software "CtrlReader.exe".
- b. The screen of operation page will be on as below

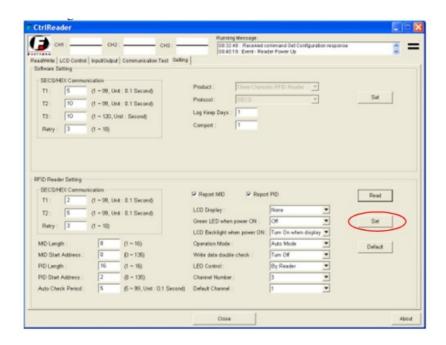

c. Click the "Setting" icon on the tool bar.

d. Click "Read" icon in order to check the default setting of RFID board. The page of "Setting "should be on as below.

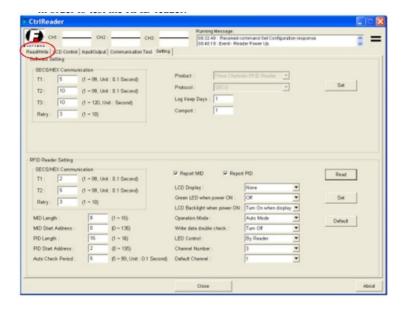

Note: Number of Channel should be "3" (maximum channels setting).

e. If the setting is not correct or not match to the customer's specification, make a change at particular item box, and then click "Set " to save all changes.

### 1.7.3 Read/Write Demo

1. Click the icon "Read/Write" (Return to the operation screen) on the tool bar in order to test the RFID reader.
