Contents

FOXCONN NXP NPC300 Module NFC Near Field Communication

Product Information

Specifications

- **Product Name:** NFC (NXP NPC300) Module 5.0
- **Manufacturer:** HongFuJin Precision Industry Co., LTD
- **Manufacture Site:** ChongQing
- **Supported RF protocols:** NFC Forum, NCI, ISO/IEC 14443, ISO/IEC 15693
- **Frequency**: 13.56MHz

Product Usage Instructions

Introduction
The T77H747.10 is an NFC module designed for integration in computer or portable equipment and consumer devices compliant with NFC standards (NFC Forum, NCI, ISO/IEC 14443 and ISO/IEC 15693) etc. This module is based on NXP NPC300 solution, which is a highly integrated transmission module for contactless communication at 13.56MHz.

Scope
The NFC module RF protocols supported:

- NFC Forum
- NCI
- ISO/IEC 14443
- ISO/IEC 15693

Function
(Remark: Regulatory Certification is not started at this phase)

- **PCB Pattern of NFC Module**

  The NFC module has a specific PCB pattern for component placement. Please refer to the user manual for

detailed information on PCB component placement and stack up.

- **Bill of Materials (BOM) of NFC Module**

  The BOM provides a list of all the materials required for the NFC module. Refer to the user manual for the complete BOM.

- **Marking Information**

  The marking information section provides details on labeling and identification of the NFC module. Refer to the user manual for the specific marking information.

- **Packing Information**

  The packing information section provides details on how the NFC module is packaged for shipping and storage. Refer to the user manual for the specific packing information.

FAQ (Frequently Asked Questions)

1. **Q: What are the supported RF protocols?**

   A: The NFC module supports NFC Forum, NCI, ISO/IEC 14443, and ISO/IEC 15693.

2. **Q: What is the frequency of the NFC module?**

   A: The NFC module operates at a frequency of 13.56MHz.

Revision History

Revision	Date	Originator	Comment
1.0	2016/01/28	Smile. Ming	Initial release
2.0	2016/04/20	Bandy.Jiang	1> Add pin 1 marking for mechanical drawing. 2> Add SM bus support in addition to I2C bus. (in page 4,5) 3> Add description of pin9 (TX_PWR_REQ) signal with active high 1.8V level output. (in page 15) 4> Change the PN of antenna connector from BM05B-ACHSS-A-GAN-ETF(LF)(SN) to BM05B- ACHKS-A-GAN-ETF(HF) 5> Update material in shielding drawing. 6> Following the latest schematic, update the material description into BOM 7> Add Tray ID label, Carton label, Pallet label into label information 8> Update packing information
3.0	2016/04/26	Bandy.Jiang	1> Update Module picture in page 18 2> Update packing information in page 23~24 3> Update vendor PN of host interface connector in page 15
4.0	2016/06/24	Bandy.Jiang	1> Remove R5 from BOM. 2> Change Foxconn project name from T77H747.00 to T77H747.10 3> Change FRU part No. from 00JT548 to 01AX745. 4> Based on above change list, update module picture, BOM, label contents and packing information.
5.0	2016/06/28	Bandy. Jiang	1> Change Host JST part number from ACHR-05V- A-S to ACHR-05V-A-K(HF) in page 14

- T77H747.10 is made in China,
- Manufactured by HongFuJin Precision Industry Co., LTD Manufacture Site: ChongQing
- **http://www.foxconn.com**

Introduction

The T77H747.10 is an NFC module designed for integration in computer or portable equipment and consumer devices compliant with NFC standards (NFC Forum, NCI, ISO/IEC 14443 and ISO/IEC 15693) etc. This module is based on NXP NPC300 solution, which is a highly integrated transmission module for contactless communication at 13.56MHz.

Scope

The NFC module RF protocols supported

- NFCIP-1, NFCIP-2 protocol
- NFC Forum device 1.3
- ISO/IEC 14443A, ISO/IEC 14443B
- ISO/IEC 15693/ICODE VCD mode
- FeliCa PCD mode/PICC mode
- MIFARE PCD encryption mechanism(MIFARE 1K/4K)
- MIFARE PICC mode
- NFC Forum tag (type 1/type 2/type 3/type 4/type V)

Function

- NFC Features
    - Reader & Writer mode
    - Peer-to-Peer Communication mode
    - Card emulation mode
- • I2C-bus and SM-bus compatible for host Interface
- • Windows 8 Logo Device Requirement compliant
    - NFC Forum Wave1 Certification
    - LLCP
    - SNEP
- • Windows 10 Logo system Requirement compliant
    - Peer to Peer Communication over 2cm distance less than 10cm
- • Modular certification
    - FCC
    - CE
    - UL/CB
    - meet other regulatory requirements (as defined by 108 countries)
    - **(Remark:** Regulatory Certification is not started at this phase)
- Support Intel Windows 7/8.x/10 platform
- RoHS and Green Compliant

Hardware block diagram

- The T77H747.10 NFC module is based on NXP NPC300 solution with includes ARM microcontroller core, EEPROM, demodulator and decoder, power management unit, host
- interface. This module is powered from the host (5V) and interfaces to the host with I2C -bus compatible signals, on-board 27.12 MHz XTAL. Also includes on board low profile FPC/FFC 12pin connector for host interface and 5pin WTB antenna connector for antenna interface. Form factor: 20.0mm x13.0mm x 2.1mm (typical) NFC module
    - **Host Interface:** I C and SM bus compatible interface with 12-pin FPC connector
    - **PCB:** 4-layers HDI design
- The functional block diagram is shown as below
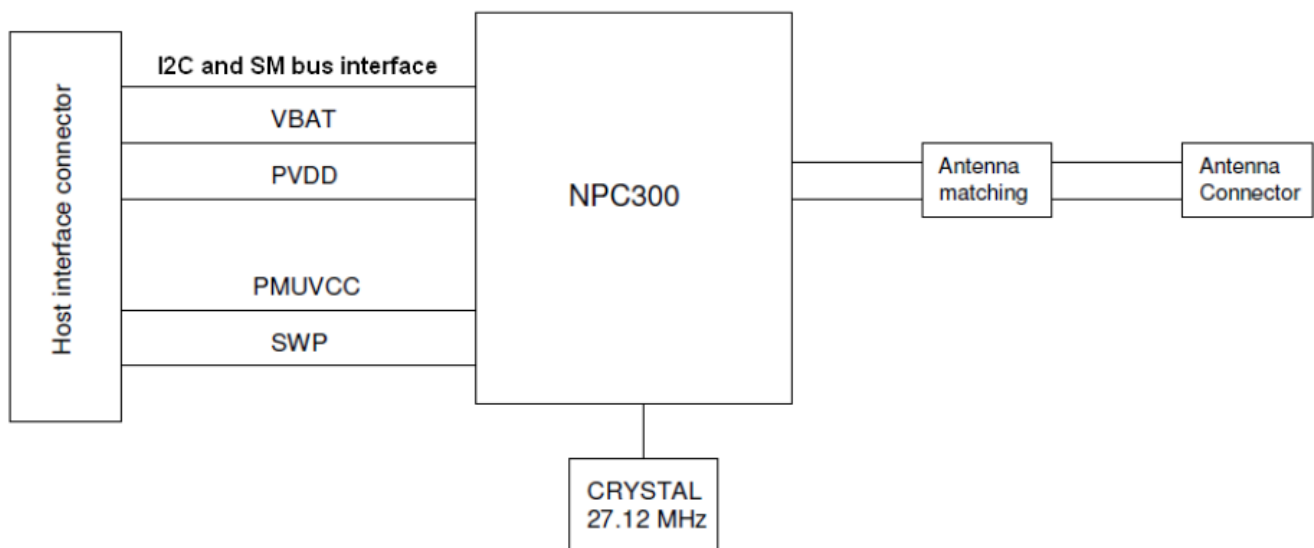

Electrical Characteristics

- **operating conditions**
  - Absolute Maximum Rating

Symbol	Condition	Min.	Typ.	Max	Unit
VBAT	Respect to GND	—	5.0	6.0	V
PVDD	Respect to GND	—	3.3	4.35	V
ESD Limit Level	HBM	—	—	+/-1.0	KV
	CDM	—	—	+/-500	V
Operating Temperature	—	0	+25	+70	°C
Storage Temperature	—	-20	+25	+85	°C
Storage Humidity	—	0	—	+85	%

Recommended Operating Condition

Symbol	Condition	Min.	Typ.	Max	Unit
VBAT	Respect to GND	4.5	5.0	5.5	V
PVDD	Respect to GND	3.0	3.3	3.6	V
PMUVCC	Respect to GND	1.62	1.8	1.98	V
VDD	Respect to GND	1.65	1.8	1.95	V
VDD(SIM)	Respect to GND	1.62	1.8	1.98	V

Power Consumption

Condition		Min.	Typ.	Max	Unit
Power consumption	Reader mode (PCD active)	—	130	—	mA
	Reader mode (PCD standby)	—	50	—	uA
	Peer to peer mode (active)	—	130	—	mA
	Peer to peer mode (standby)	—	50	—	uA
	Continue TX mode	—	130	—	mA
	Hard Power Down mode	—	10	—	uA

Host interface characteristics

- I2C-bus Interface
- The I2C-bus Interface implements a slave I2C-bus interface with integrated shift register, shift timing generation and slave address recognition.
- I2C-bus Standard mode (100 KHz SCL), Fast mode (400 KHz SCL) and High-speed mode (3.4 MHz SCL) are supported.
- I2C-bus timings
- Here below are timings and frequency specifications.
I²C-bus timings

High-speed mode I2C-bus timing specification

Symbol	Parameter	Conditions	Min	Max	Unit
fCLK(HIF4)	Clock frequency on pin HIF4	I C-bus SCL; Cb <100pF	0	3.4	MHz
tSU;STA	Set-up time for a repeated START condition	C_b<100pF	160	–	ns
tHD;STA	Hold time(repeated) START condition	C_b<100pF	160	–	ns
tLOW	LOW period of the SCL clock	C_b<100pF	160	–	ns
tHIGH	HIGH period of the SCL clock	C_b<100pF	60	–	ns
tSU;DAT	Date set-up time	C_b<100pF	10	–	ns
tHD;DAT	Data hold time	C_b<100pF	0	–	ns
tr(HIF3)	Rise time on pin HIF3	I C-bus SDA; C <100pF b	10	80	ns
tf(HIF3)	Fall time on pin HIF3	I C-bus SDA; C <100pF b	10	80	ns
Vhys	Hysteresis voltage	Schmitt trigger inputs; C_b<100pF	0.1*VPVDD	–	V

Fast mode I2C-bus timing specification

Symbol	Parameter	Conditions	Min	Max	Unit
fCLK(HIF4)	Clock frequency on pin HIF4	I C-bus SCL; Cb <400pF	0	400	KHz
tSU;STA	Set-up time for a repeated START condition	C_b<400pF	600	–	ns
tHD;STA	Hold time(repeated) START condition	C_b<400pF	600	–	ns
tLOW	LOW period of the SCL clock	C_b<400pF	1.3	–	ns
tHIGH	HIGH period of the SCL clock	C_b<400pF	600	–	ns
tSU;DAT	Date set-up time	C_b<400pF	100	–	ns
tHD;DAT	Data hold time	C_b<400pF	0	900	ns
Vhys	Hysteresis voltage	Schmitt trigger inputs; C_b<400pF	0.1* VPVDD	–	V

Power-up sequence

- There are 2 different supplies for module which allows set up independently, therefore different power-up sequences have to be considered. 1> VBAT is set up before PVDD
- This is at least the case when VBAT pin is directly connected to the battery and when module VBAT is always supplied as soon the system is supplied.
- As VEN pin is referred to VBAT pin, VEN voltage shall go high after VBAT has been set.

VBAT is set up before PVDD
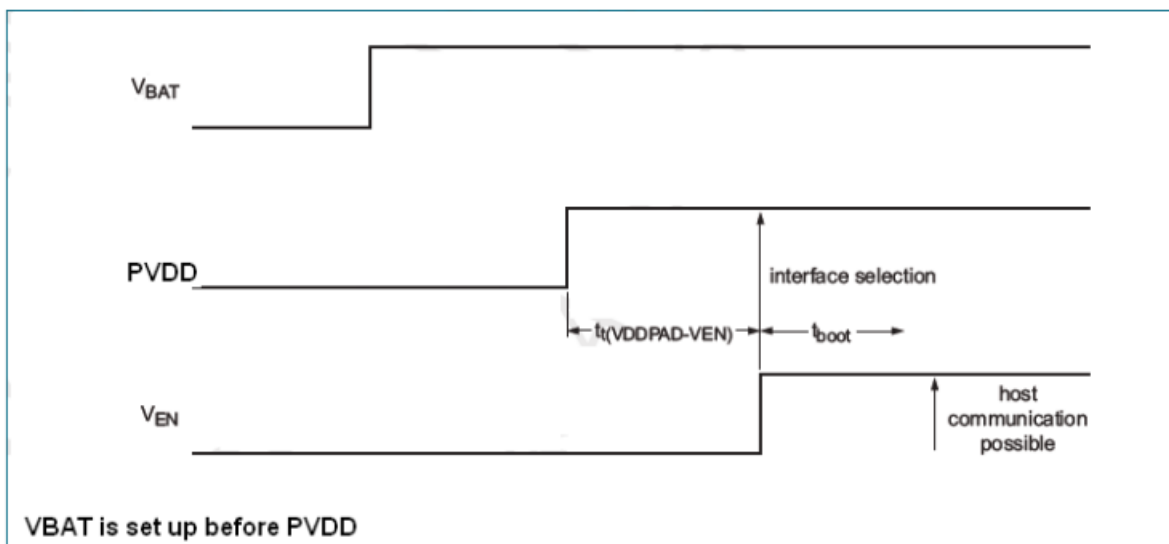

- 2> PVDD and VBAT are set up in the same time
- It is at least the case when VBAT pin is connected to a PMU/regulator which also supplies PVDD.

PVDD and VBAT are set up in the same time

Power-down sequence
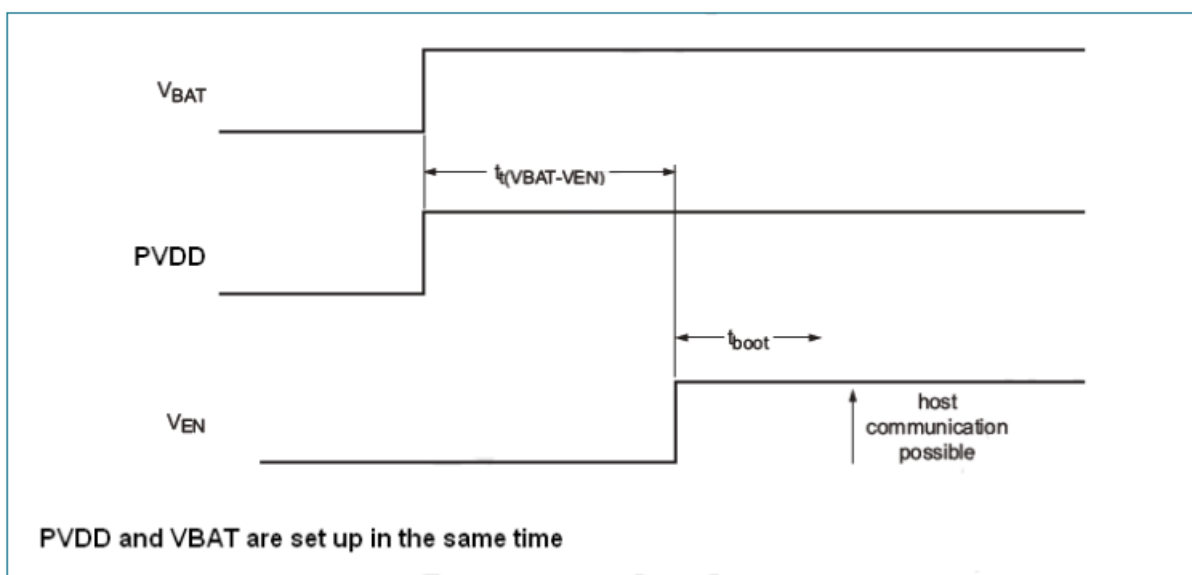

power-down sequence

Function timing characteristics

Reset timing
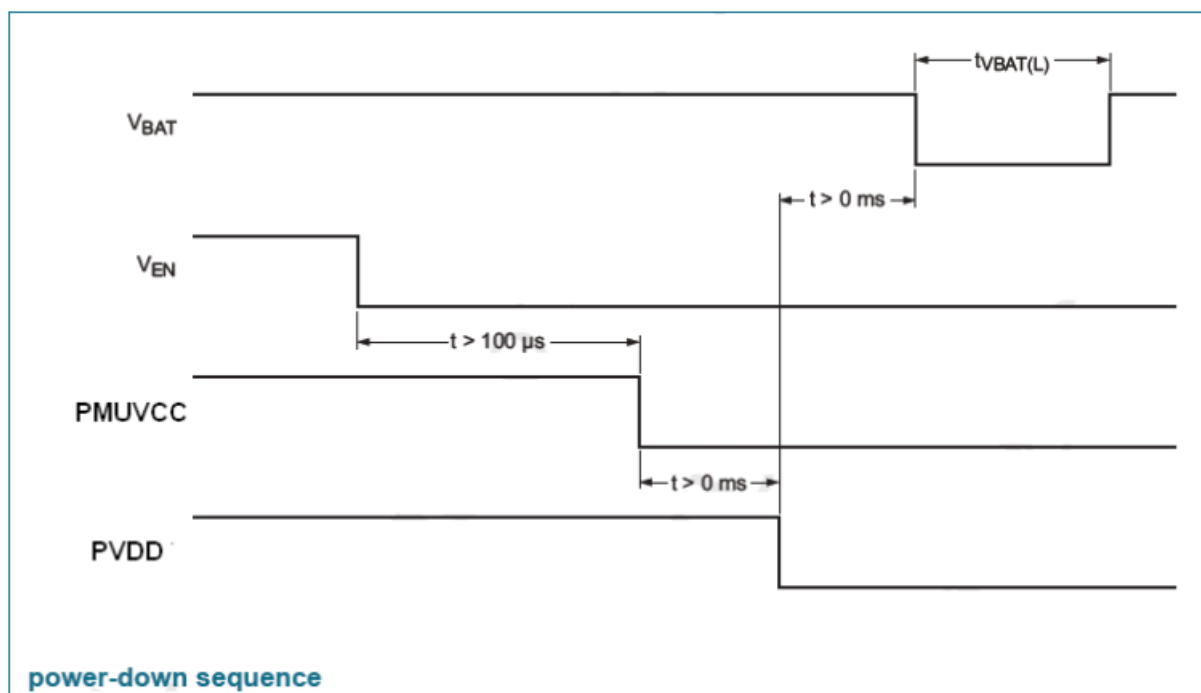

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
tW(VEN)	VEN pulse width	To reset	10	–	–	us
tboot	Boot time		–	–	2.5	ms

Power-up timings

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
tt(VBA T – V E N)	Transition time from pin VBAT to pin VEN	• VBAT,VEN • Voltage=HIGH	0	0.5	–	ms
tt(VPV D D – V E N)	Transition time from pin PVDD to pin VEN	• PVDD,VEN • Voltage=HIGH	0	0.5	–	ms
tt(VBA T – V P V D D)	Transition time from pin VBAT to pin PVDD	• VBAT,PVDD • Voltage=HIGH	0	0.5	–	ms

Power-down timings

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
tVBAT(L)	Time V_{BAT} LOW		20	–	–	ms

Download mode timings

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
Tt(DWL_REQ-VEN)	Transition time from pin DWL_REQ to pin VEN	• DWL_REQ,VEN • voltage=HIGH	0	0.5	–	ms

NFC contactless standard conformance

Frequency interoperability

- When in communication, NFC module is generating some RF frequencies. It is also sensitive to some RF signals as it is looking from data in the field.

- In order to avoid interference with others RF communication, it is required to tune the antenna matching for antenna board.
- **(Remark:** The antenna matching tuning is responsible for antenna vendor)
- It must limit the RF frequency dispersion to 13.56MHz +/-50ppm.

Supported smart card types

Card Types	Read CSN (Card Serial Number)	Read/Write application data area	Supported baud rates

Contactless interface unit

- The NFC module supports various communication modes at different transfer speeds and modulation schemes. The following chapters give more detailed overview of selected communication modes.
- 1> Reader/Writer communication modes

Generally 5 reader/writer communication modes are supported:

- 1> Reader/Writer communication modes
- Generally 5 reader/writer communication modes are supported:
    - PCD reader/writer for ISO/IEC 14443A/MIFARE
- The transfer speed includes 106 kbit/s, 212 kbit/s, 424 kbit/s and 848 kbit/s.
    - PCD reader/writer for ISO/IEC 14443B
- The transfer speed includes 106 kbit/s, 212 kbit/s, 424 kbit/s and 848 kbit/s.
    - PCD reader/writer for Jewel/Topaz tags
- The transfer speed includes 106 kbit/s, 212 kbit/s, 424 kbit/s and 848 kbit/s.
    - PCD reader/writer for FeliCa cards
- The transfer speed includes 212 kbit/s, 424 kbit/s.
    - VCD reader/writer for ISO/IEC 15693/ICODE
- The transfer speed includes 1.65 kbit/s, 26.48 kbit/s.
- 2> Peer to Peer communication modes
    - (ISO/IEC 18092, Ecma 340 NFCIP-1 communication modes)
An NFCIP-1 communication takes place between 2 devices

- **NFC initiator:** generates RF field at 13.56 MHz and starts the NFCIP-1communication.
- **NFC Target:** responds to NFC initiator command either in a load modulation scheme in Passive communication mode or using a self-generated and self-modulated RF field for
- Active communication mode.
    - The NFCIP-1 communication differentiates between Active and Passive communication modes.
    - Active communication mode means both the NFC initiator and the NFC target are using their own RF field to transmit data
    - Passive communication mode means that the NFC target answers to an NFC initiator command in a load modulation scheme. The NFC initiator is active is terms of generating the RF field.
- The NFC module supports the Active Target, Active Initiator, Passive Target and Passive Initiator communication modes at the transfer speeds 106 kbit/s, 212 kbit/s and 424 kbit/s.

3> Card communication modes

- The NFC module can be addressed as an ISO/IEC 14443A or ISO/IEC 14443B cards. This means that NFC module can generate an answer in a load modulation scheme.
- The transfer speed includes 106 kbit/s, 212 kbit/s and 424 kbit/s.

Reliability Test plan

No	Item	Test Condition	Qty	Criteria	Result
1	Pull test & Cross Section (2pcs) Cross Section: 1pcs Pull Test: 1pcs	1. Visual inspection: All locations 2. Cross section: BGA/Connector/PTH Hole/Via Hole (SMT/PIH) 3. Pull strength: 0.4mm/0.5mm pitch QFP		1. Visual Inspection – Compliance with IPC-A-610D Class 3 & 39T0261; 2. Function test Pass; 3. Cross section - No separation - Allowable Crack Length: Max. 25% of pad diameter 4. Pull test - 800g for 0.4mm pitch QFP, 1kg for 0.5mm pitch QFP	TBD
2	Low Temperature Test	4. Power on; 5. Temp.= -40 ; 6. Test Period = 240hrs.	2	Pls refer to ATC	TBD
3	Hot Start Test	1.Power Off , 2.Temperature=100 3.Test period=96 Hours 4.Power on 3times	2	1. Visual Inspection – Compliance with IPC-A-610D Class 3 & 39T0261; 2. Function test Pass.	TBD
4	Cold Start Test	1.Power Off 2.Temperature= 3.Test period= Hours 4.Power on times	2	1. Visual Inspection – Compliance with IPC-A-610D Class 3 & 39T0261; 2. Function test Pass.	TBD
5	Temperature-Humidity Bias (THB)	1. Power On (apply core voltage to PCBA) 2. Temp.= 85 & Humi.= 85%R.H 3. Test period= 400 Hours	2	Pls refer to ATC	TBD
6	Accelerated Thermal Cycles (ATC)	ATC: 1.Power off 2.Ta=85 for 7.5mins 3.Ta=85 to -40 for 7.5mins 4.Ta=-40 for 7.5mins 5.Ta=-40 to 85 for 7.5mins 6.Repeat 630cycles Cross Section(both Bright & Dark): BGA/CONNECTOR/PTH Hole/ Via Hole (SMT/PIH)	2	1. Visual Inspection – Compliance with IPC-A-610D Class 3 & 39T0261; 2. Function test Pass; 3. Cross section (AFTER 630 cycles) - No separation - Allowable Crack Length: Max. 25% of pad diameter	TBD
7	Sine Vibration(Unpackaged)	1. Frequency = 5 ~ 500 ~ 5 HZ; 2. Acceleration = 2 G; 3. Sweep time: 3mins/cycle; 4. Each of x, y, z axis/ 30 min; 5. Power on and continuously ping AP/SG./Golden(AP for WLAN, SG for WWAN, Golden for BT) 6. Product need to be connected with the mating connector which used in laptop.	2	1. Visual Inspection – Compliance with IPC-A-610D Class 3 & 39T0261; 2. Function test Pass; 3. No disconnect between device & AP/SG /Golden during the test .	TBD
8	Shock Test(Unpackaged)	1. Half-Sine wave ,50G , 11msec 2. Test +/- x, y, z axes 3. Three shock per axes, total 18 shocks. 4. Product need to be connected with the mating connector which used in laptop. 5. Detect by an electrical discontinuity monitor.	2	1. Visual Inspection – Compliance with IPC-A-610D Class 3 & 39T0261; 2. No electrical discontinuity is greater than 1 microsecond.	TBD
9	Sine Vibration(Packaged)	1. Frequency = 5 ~ 500 ~ 5 HZ; 2. Acceleration = 2 Grms; 3. Each of x, y, z axis/ 30 mins.	1 Carton	1. Visual Inspection – Compliance with IPC-A-610D Class 3 & 39T0261; 2. Function test Pass.	TBD
10	Shock Test(Packaged)	1. Sine wave ,230G , 3msec ; 2. Test +/- x, y, z axes	1 Carton	1. Visual Inspection – Compliance with IPC-A-610D Class 3 & 39T0261; 2. Function test Pass.	TBD
11	Tin Wisker	1. Power off 60/95%RH for 2000hrs; 2. Room Temperature 2000hrs.	10	Whisker Length <50um	TBD

Notice

- **Operating Temperature Conditions**
    - The product shall be capable of continuous reliable operation when operating in ambient temperature of 0°C to 70°C.
- **Non-Operating Temperature Conditions**
    - Neither subassembly shall be damaged nor shall the operational performance be degraded when restored to the operating temperature when exposed to storage temperature in the range of -20°C to

+85°C.

- **Operating Humidity Conditions**
    - The product shall be capable of continuous reliable operation when subjected to relative humidity in the range of 0% and 85% non-condensing.
- **Handling Environment**
    - Please make sure to avoid mechanical shock and vibration for this module.
    - Please do not drop the module.
    - Please do not clean the module.

Federal Communication Commission Interference Statement

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

- If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:
    - Reorient or relocate the receiving antenna.
    - Increase the separation between the equipment and receiver.
    - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
    - Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.
This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Radiation Exposure Statement
This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20cm between the radiator & your body.

Radiation Exposure Statement

- The product complies with the FCC portable RF exposure limit set forth for an uncontrolled environment and is safe for intended operation as described in this manual. Further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such a function is available.
- This device is intended only for OEM integrators under the following conditions

- The antenna must be installed such that 20 cm is maintained between the antenna and users, and The transmitter module may not be collocated with any other transmitter or antenna.
- As long as 2 conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed
- **IMPORTANT NOTE:** In the event that these conditions can not be met (for example certain laptop configurations or co-location with another transmitter), then the FCC authorization is no longer considered valid and the FCC ID can not be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC authorization.

End Product Labeling

- This transmitter module is authorized only for use in device where the antenna may be installed such that 20 cm may be maintained between the antenna and users. The final end product must be labeled in a visible area with the following: "Contains FCC ID:MCLT77H747". The grantee's FCC ID can be used only when all FCC compliance requirements are met.

Manual Information To the End User

- The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.
The end user manual shall include all required regulatory information/warning as show in this manual.

Industry Canada statement
This device complies with ISED's licence-exempt RSSs.

Operation is subject to the following two conditions

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Radiation Exposure Statement

- This equipment complies with ISED radiation exposure limits set forth for an uncontrolled environment.
- This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

Radiation Exposure Statement
The product complies with the Canada portable RF exposure limit set forth for an uncontrolled environment and is safe for intended operation as described in this manual. Further RF exposure reduction can be achieved if the product can be kept as far as possible from the user's body or by setting the device to lower output power if such a function is available.

1. The antenna must be installed such that 20 cm is maintained between the antenna and users, and
2. The transmitter module may not be co-located with any other transmitter or antenna.

3. As long as 2 conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

IMPORTANT NOTE

- In the event that these conditions can not be met (for example certain laptop configurations or co-location with another transmitter), then the Canada authorization is no longer considered valid and the IC ID can not be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate Canada authorization.
- **End Product Labeling**

  This transmitter module is authorized only for use in device where the antenna may be installed such that 20 cm may be maintained between the antenna and users. The final end product must be labeled in a visible area with the following: "Contains IC: 2878D-T77H747"

Manual Information To the End User

- The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.
- The end user manual shall include all required regulatory information/warning as show in this manual.
- This radio transmitter (IC: 2878D-T77H747, Model: T77H747) has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

DETACHABLE ANTENNA USAGE

- This radio transmitter (IC: 2878DT77H747 / Model: T77H747) has been approved by ISED to operate with the antenna type listed below with maximum permissible gain indicated.
- Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Antenna NO.	Brand	Model	Antenna Gain(dBi)	Frequency range	Antenna Type	Connector Type
