Integers!

Games Integer Board Game Project

Teacher Instructions

Your students have been chosen to create a board game for a math company to help promote learning integers in a FUN way. They need to design and create this to present to the company to see which group will be chosen.

- Break your students up into groups of 2 or 3.

- Each group will need:
- One copy of the Student Directions Worksheet
 - Copy of the Student Job Cards
 - One copy of the Group Worksheet
 - Crayons, Markers or Colored Pencils
 - Scissors
 - Glue
 - Colored Paper
 - Access to a digital device (if possible) to type directions/materials list
 - One copy of each of the four-game boards (optional – encourage students to get creative and use cardboard or other items)
- **Each group will:**
 - Design their own integer operations game that must include all four operations and include the use of positive/negative integers and the order of operations.
 - Write detailed directions on how the game should be played.
 - Include a materials list of everything in the “box”
- **Each group should:**
 - Either use dice or some form of cards with problems on them.
 - Ideally, the answer a student gets will indicate their movement forward or backward on the game board.
 - Come up with a creative theme for their board game’s world: space, a carnival, the beach, etc.
 - Test their game out! They should play it and make sure it works and is fun.
