Product description

1. WiFi networking indicator	2. Battery indicator
3. Lanyard	4. Power button
5. Multi-function key	6. Type-C interface

Accessories for Pet version:

Waterproof box x 1

Strap x 1

Instructions of accessories for pet version:

	
1. Open the waterproof box	2. Insert device into the waterproof box
	
3. Use the strap to tie device with waterproof box to the pet collar	

Product specifications

- Size 84*46*9.2mm
- Positioning Technology GPS BDS GLONASS WiFi Bluetooth LBS Active Radar
- LTE FDD B1/2/3/5/8/12/13/17/18/19/20/25/26/28
- Wi-Fi IEEE802.11 b/g/n
- Battery Capacity 960 mAh (TYP)
- Power Input DC 5V/500mA
- USB port: Type-C Input

User Guide

The screens and settings in this manual may vary depending on the software version

1. Download GlocalMe App

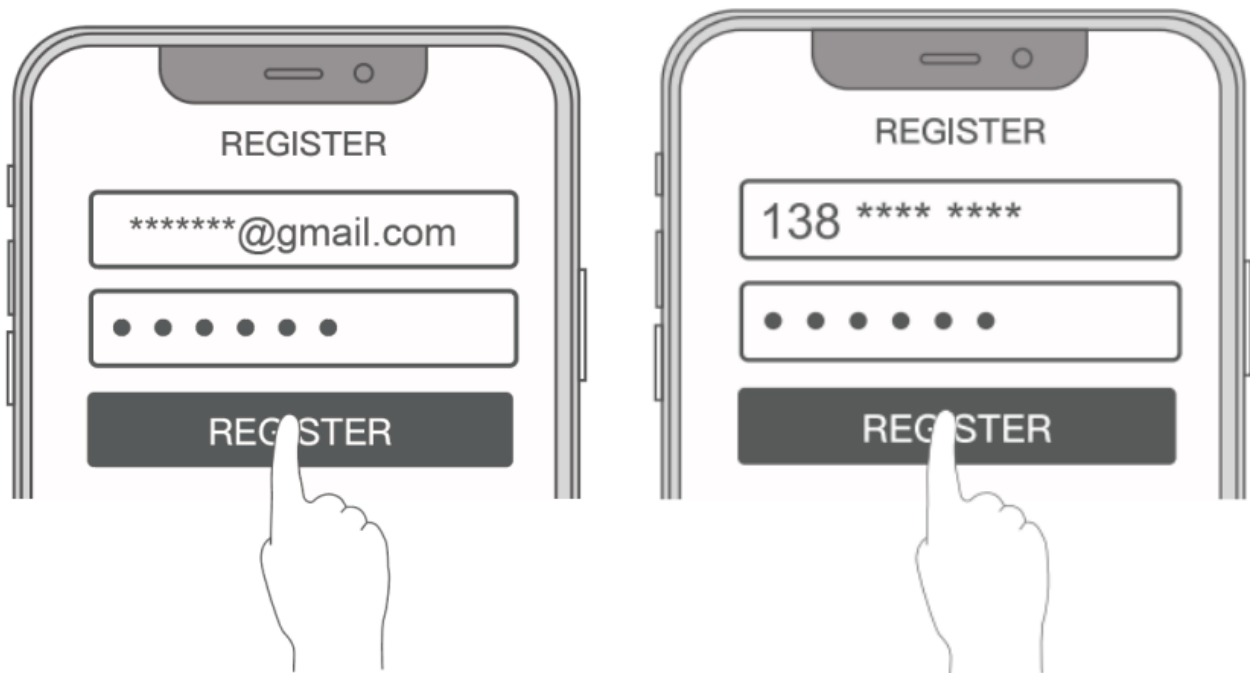

Download and install GlocalMe App on your mobile phone

<https://www.glocalme.com/CN/zh-CN/download/downloadPage?goto=default>

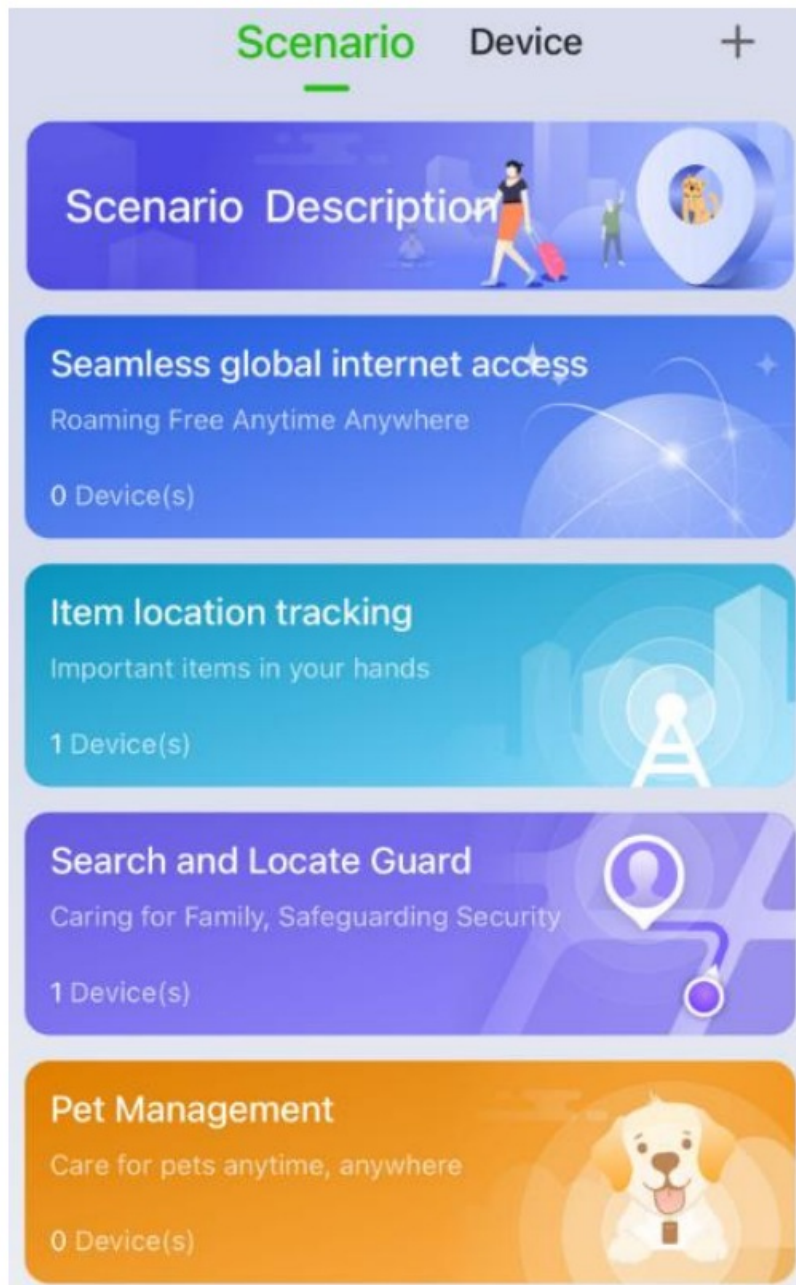

Create a GlocalMe Account(In App)

Click [Login]—[Register] Complete the registration and activate the account according to the instructions (you can use your mobile phone number or email address to register)

Link Device with GlocalMe APP

1. Add new devices in the following two ways: (1) Select one of the three scenarios of "Item Location Tracking" and "Person Locating and Positioning Guard" to use. After entering the scenario page, select Add Device

Function introduction

5.1 "Item location and tracking" usage scenarios

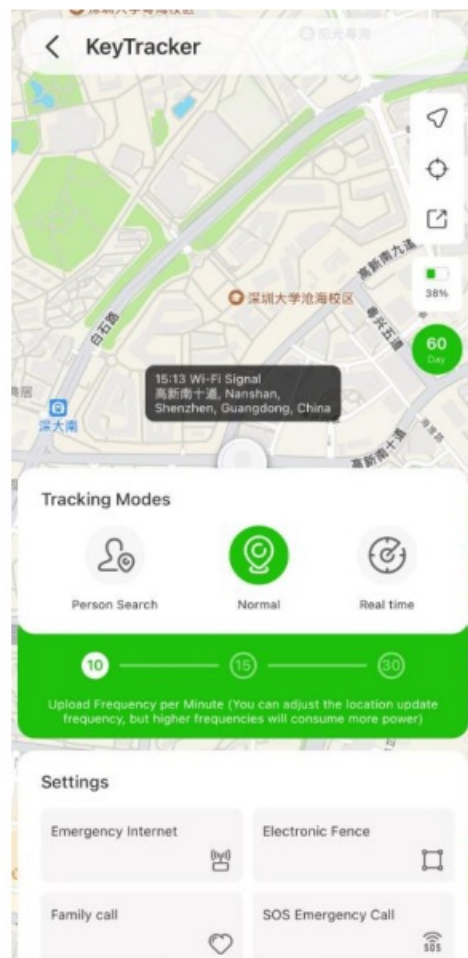

In the main interface, you can view the last reported location information of the device, and provide three working modes: normal, real-time, and object finding to meet different usage needs.

1. The normal mode is suitable for most daily usage scenarios and can provide 3 to 5 days of device life. The device reports location information every 10 to 30 minutes to meet the device positioning needs under normal circumstances.
2. The real-time mode is suitable for situations where the target location needs to be tracked in real time. In this usage mode, the device will report the location information immediately, and you can keep track of the latest location. However, this mode consumes higher power and will shorten the battery life of the device.
3. The object-finding scene is suitable for situations where you need to find a target. It will use multiple positioning technology and active search functions to better help you find the target.
4. The device also provides an emergency Internet function. After turning on this function in an emergency, you can access the Internet to seek various assistance.

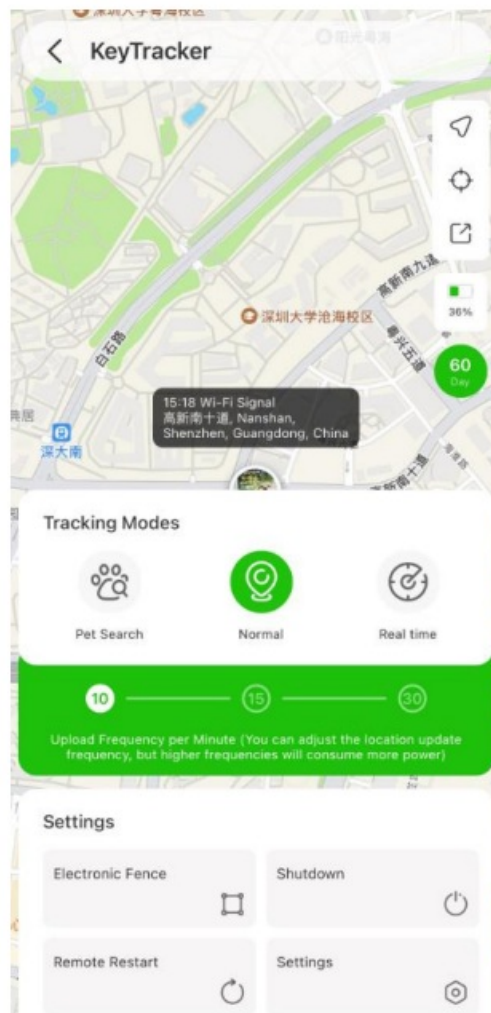

5.2 "Search and locate guard" usage scenarios

Provides three working modes: normal, instant, and finding objects to meet different usage needs.

1. The normal mode is suitable for most daily usage scenarios and can provide 3 to 5 days of device life. The device reports location information every 10 to 30 minutes to meet the device positioning needs under normal circumstances.
2. The real-time mode is suitable for situations where the target location needs to be tracked in real time. In this usage mode, the device will report the location information immediately, and you can keep track of the latest location. However, this mode consumes higher power and will shorten the battery life of the device.
3. The person-finding mode is suitable for situations where you need to find targets. It will use multiple positioning technology and active radar search functions to better help you find targets.
4. The device also provides an emergency Internet function. When this function is turned on in an emergency, it can help users access the global network and seek various resources and information assistance to solve your emergency needs. The function is the same as the usage scenario of “Item Location and Tracking”

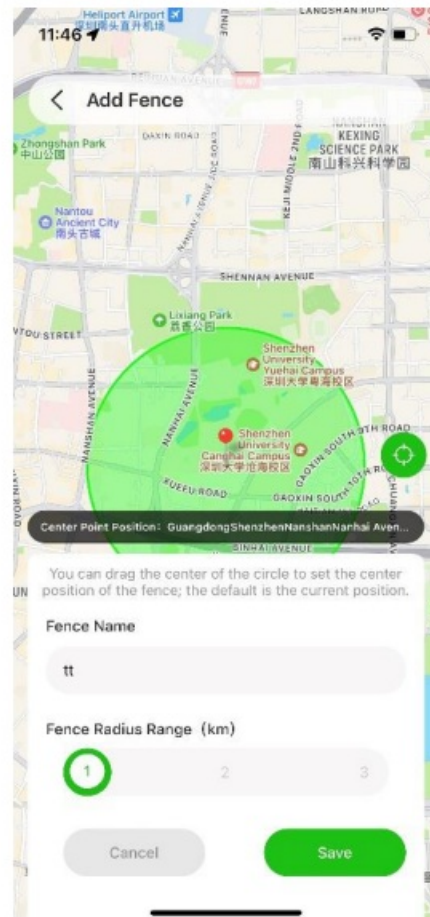

5.3 “Pet Management” usage scenarios

Designed to better manage the location of pets, timely locate and grasp pet information, and prevent pets from getting lost. In the main interface, you can view the last reported location information of your pet, and provide three working modes: normal, real- time, and pet-finding to meet different usage needs.

1. Normal mode is suitable for most daily use scenarios and can provide 3 to 5 days of device life. The device

- reports location information every 10 to 30 minutes to meet pet positioning needs under normal circumstances.
2. The real-time mode is suitable for situations where you need to track the location of your pet in real time. In this usage mode, the device will report the location information immediately, so you can keep track of the latest location of your pet. However, this mode consumes higher power and will shorten the battery life of the device.
 3. The pet-finding mode is suitable for situations where you need to find pets. It will use multiple positioning technology and active radar search functions to better help you find pets.
 4. By setting up the electronic fence, when the pet leaves the fence range, relevant messages can be sent through the App to notify the owner of the corresponding situation.

[Indicator light status description]

1. Press and hold the power button for 3 seconds to turn the device on/off.
 - a. Power on: The device power indicator light and Wi-Fi networking indicator light will light up for 2 seconds and then go out automatically.
