## SUPPORTED MODELS

**Table 1:** Supported models

Model	Supported	Firmware
GWN7600 / GWN7600LR	Yes	1.0.19.4 or higher
GWN7610		
GWN7605 / GWN7605LR		
GWN7615		
GWN7602		
GWN7630 / GWN7630LR		

## SUPPORTED SNMP VERSIONS

**Table 2:** Supported SNMP versions

SNMP Version	Version 1	Version 2C	Version 3
GWN7600 / GWN7600LR	Yes	Yes	Yes
GWN7610	Yes	Yes	Yes
GWN7605 / GWN7605LR	Yes	Yes	Yes
GWN7615	Yes	Yes	Yes
GWN7602	Yes	Yes	Yes
GWN7630 / GWN7630	Yes	Yes	Yes

## SUPPORTED SNMP MESSAGES

**Table 3:** Supported SNMP messages

Traps	Get	GetNext	GetBulk	Set	Response
No	Yes	Yes	Yes	No	Yes

## INTRODUCTION

SNMP (Simple Network Management Protocol) is an Internet-standard protocol for managing devices on IP networks. It is used mostly in network management systems to monitor IP network devices for conditions that warrant administrative attention. SNMP exposes management data in the form of variables on the managed systems, which describe the system configuration. These variables can then be queried (and sometimes set) by managing applications. The variables accessible via SNMP are organized in hierarchies, which are described by Management Information Bases (MIBs).

Three significant versions of SNMP have been developed and deployed. SNMPv1 is the original version of the protocol. More recent versions, SNMPv2c and SNMPv3, feature improvements in performance, flexibility, and security.

This guide will cover the configuration steps to enable and test the SNMP feature on GWN76xx Wi-Fi access points.

## ENABLING SNMP FEATURE

### Enable SNMPv1/SNMPv2c

Please refer to below steps to enable SNMPv1, SNMPv2c in GWN76xx access points:

1. Access GWN76xx web GUI under Service → SNMP.
2. Under SNMPv1, SNMPv2c, press on “Enable” icon.
3. Enter the “Community String” (Should be the same as set in the NMS or SNMP testing tool). The default is “public”, but you can change it to any string you want.

The screenshot shows the configuration interface for SNMPv1 and SNMPv2c. The 'Enable' toggle switch is turned on and highlighted with a red box. The 'Community String' field contains the default value 'public'. Below this, the 'SNMPv3' section is visible with its 'Enable' toggle switch turned off. At the bottom are 'Save' and 'Reset' buttons.

Figure 1 : Enabling SNMPv1, SNMPv2c

Table 4: SNMPv1,SNMPv2 parameters description

SNMPv1, SNMPv2c	
Enable	Enable SNMPv1, SNMPv2c
Community String	SNMP community

### Enable SNMPv3

Please refer to below steps to enable SNMPv3 in GWN76xx access points:

1. Access GWN76xx web GUI under Service → SNMP.
2. Under SNMPv3, press on the “Enable” icon.
3. Fill in the SNMPv3 Username, in our example “test”
4. Set the other parameters for Authentication and Privacy. Please refer to the table in the next page for the parameters description.

The image shows a web-based configuration interface for SNMPv3. At the top, there is a section header 'SNMPv3'. Below it, there is a red-bordered box containing an 'Enable' toggle switch, which is currently turned on. Below the toggle, there are five input fields: 'Username' with the value 'test', 'Authentication mode' with a dropdown menu showing 'MD5', 'Authentication password' with a masked password '.....', 'Privacy mode' with a dropdown menu showing 'DES', and 'Privacy password' with a masked password '.....'. At the bottom of the form, there are two buttons: 'Save' (blue) and 'Reset' (grey).

Figure 2: Enabling SNMPv3

Table 5: SNMPv3 parameters description

SNMPv3	
Enable	Enable SNMPv3
Username	Username for SNMPv3
Authentication Mode	Select the Authentication Protocol: <ul style="list-style-type: none"> <li>• MD5</li> <li>• SHA</li> </ul> The default setting is “MD5”.
Authentication password	Enter the Authentication password (Must be at least 8 characters).
Privacy Mode	Select the Privacy Protocol: <ul style="list-style-type: none"> <li>• DES</li> <li>• AES</li> </ul> The default setting is “DES”.
Privacy password	Enter the Privacy password. (Must be at least 8 characters).

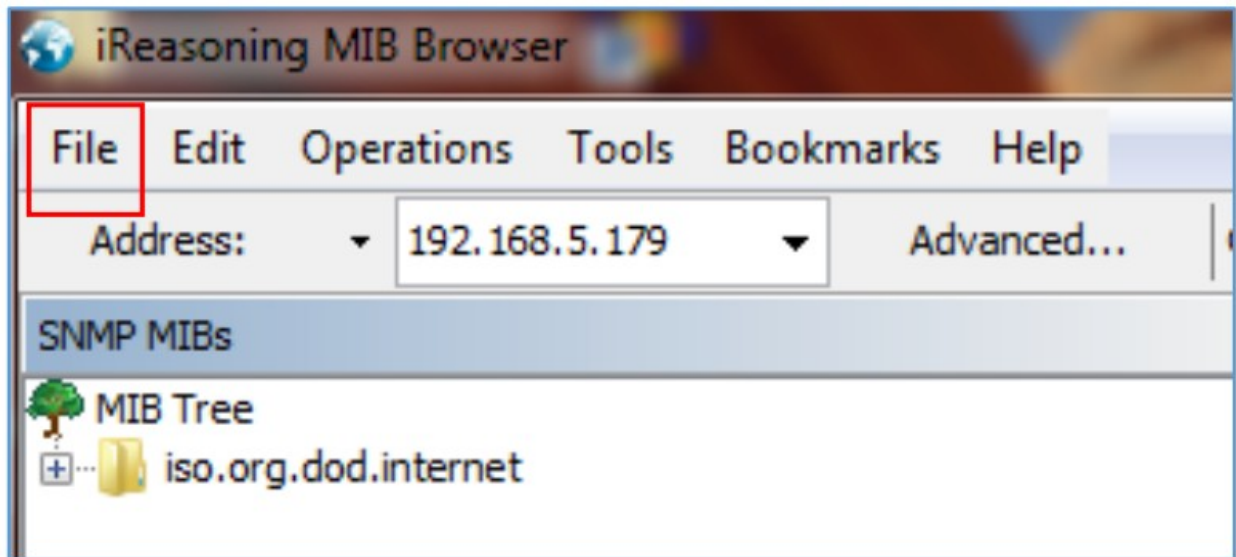

## TESTING SNMP FEATURE

After configuring SNMP on the GWN76xx access point, you can test SNMP using your enterprise monitoring system or a free SNMP test tool.

In this document we will be using “iReasoning MIB browser” which is an easy to use SNMP tester that has a Free and Professional paid version for SNMPv3.

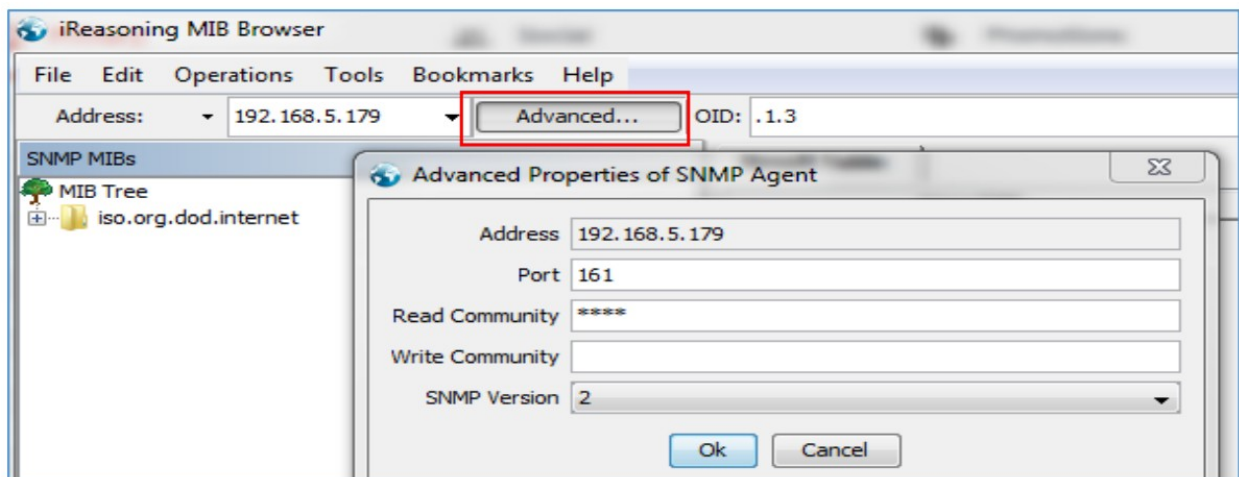

You can follow the steps below in order to test SNMP using iReasoning MIB Browser

1. Download MIB Browser Personal Edition from this link: <http://ireasoning.com/download.shtml>
2. Double click “setup.exe” to start the installation
3. Once the installation is done, the tool will be launched.
4. Click on “File” then “Load MIBs” in order to import the GWN76xx MIB.

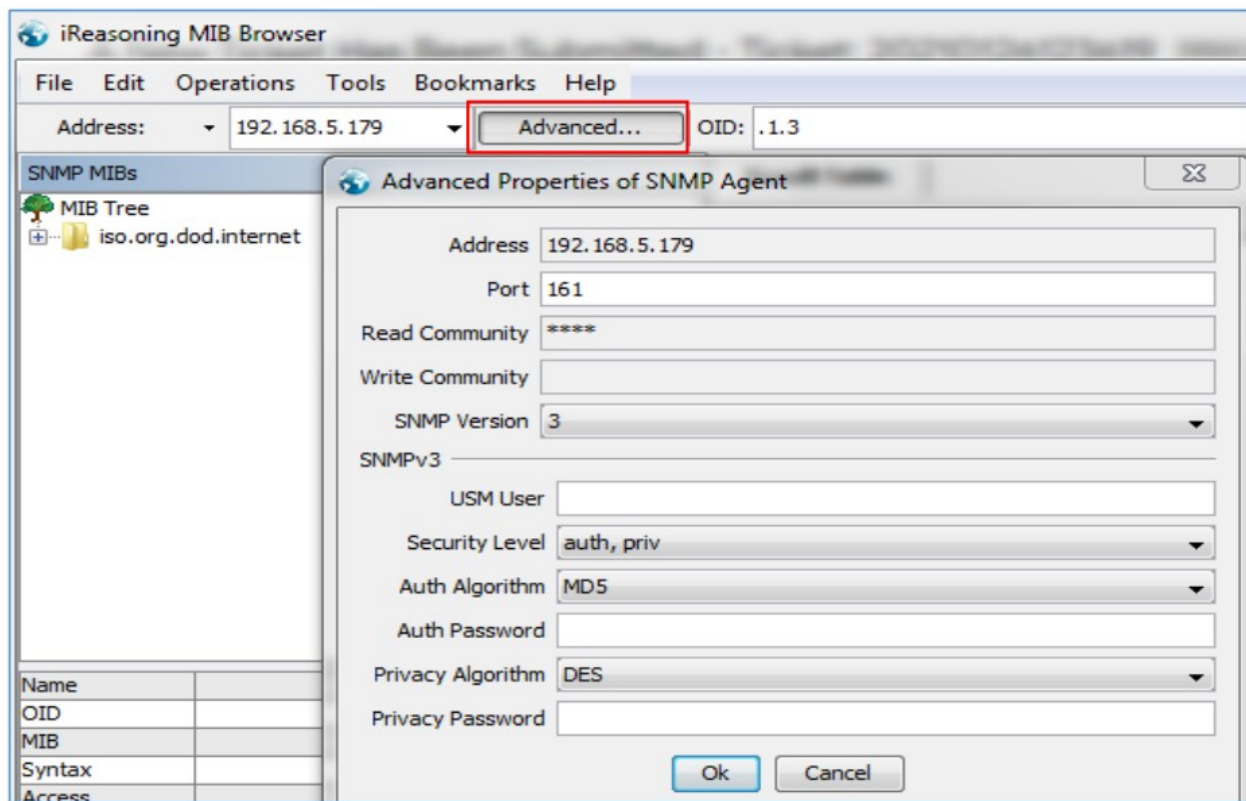

**Figure 3 : Load GWN76xx MIB**

5. Then enter the IP address of the GWN76xx access point in the Address tab as shown in above screenshot, for our example we are using a GWN76xx with the IP 192.168.5.179
6. Click on “Advanced...”
  - If SNMPv1 or SNMPv2c is selected, enter the Read Community (It should be the same as the “Community String” set on the GWN76xx)

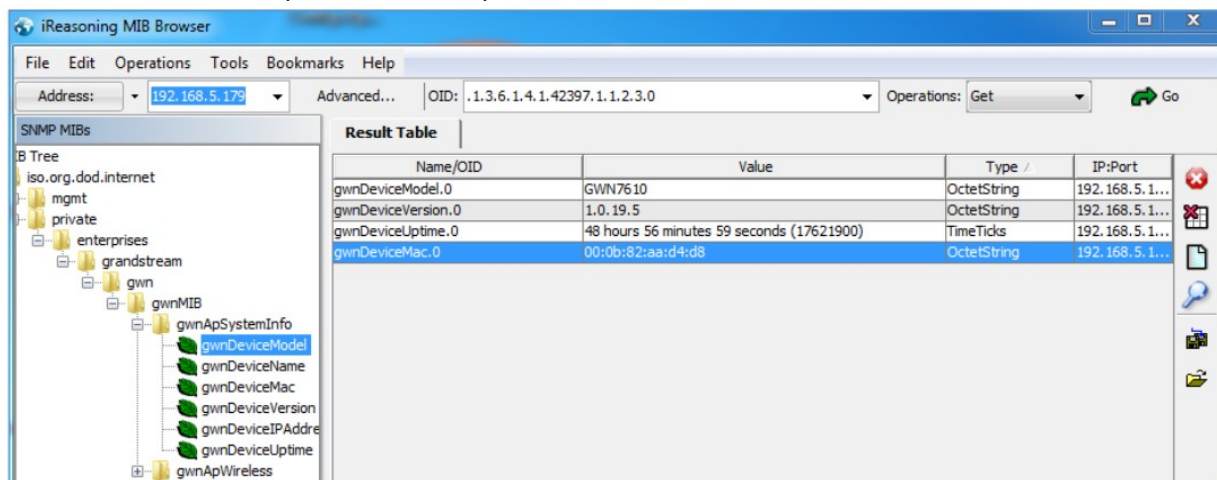

**Figure 4: MIB Browser settings SNMPv1/SNMPv2c**

- If SNMP version 3 is selected, fill in the Username, and the Authentication, Privacy settings (These settings should be the same as set on the GWN76xx)

**Figure 5: MIB Browser SNMPv3 settings**

After configuring the parameters as shown in above steps you can then start sending SNMP GET messages to the GWN76xx access point to retrieve information such as: Device uptime, Firmware version, Model, etc.. Below screenshot is an example of SNMP responses received from the GWN76xx.

**Figure 6: SNMP GET responses**

## GWN76XX MIB REFERENCE

You can download the MIB for GWN76xx Wi-Fi access points from below link:  
<http://firmware.grandstream.com/GRANDSTREAM-GWN-MIB.my>
