Guest Internet Solutions STAR-15 kit Wi-Fi Community Internet Service

STAR-14 kit

An easy to install kit that provides a community WiFi Internet service using your ISP or Starlink

INSTRUCTIONS FOR SUE

- Sell the Internet service in your building or outside to a community with several methods, including voucher sales and Mobile Money payments.
- Everything you need in one kit to start providing an Internet service using your ISP connection or your Starlink antenna.
- Easy self-install and management of Internet sales, you do not depend on others.
- The GIS-K3 WiFi controller and wireless access point has the Internet user management software installed.
- Connect network and wireless devices to the GIS-K3, wired computers, indoor and outdoor wireless access points, Ethernet switched to connect more devices.
- Monitor the service for failures: get alerts.
- Protection from abuse of the Internet service; prevents unauthorized Internet access.
- No other fees, maintenance, license, software, services or contracts.
- Free support, free upgrades and free cloud service; manage the PoS from anywhere.
- Branding is easy to customize your Internet service.

Community Internet using ISP service: easy to install and operate

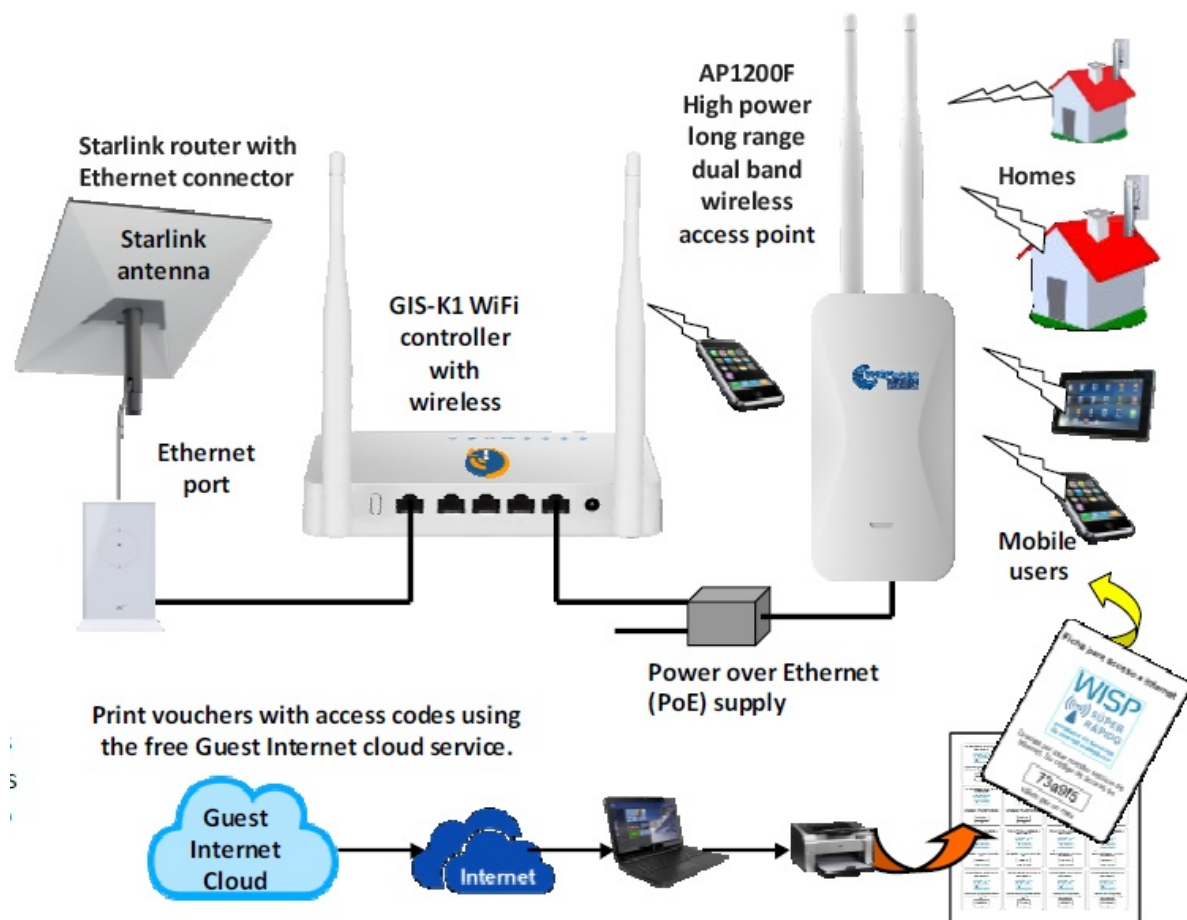

- Many rural communities around the world had no hope of getting Internet access until now. The Starlink Internet operates almost everywhere in the world and can be shared with homes in a community when the Internet service is managed using a Guest Internet controller.
- The unique Guest Internet features maintain good Internet performance for many

users while ensuring that Starlink requirements are not exceeded.

- Provide a WiFi Internet service to mobile devices and homes using the STAR-15 kit and your ISP connection
- When the STAR-15 kit is connected to a Starlink antenna, it can provide an Internet service for several homes that have a Star-4 kit installed. The GIS-K1 WiFi Internet controller connects to the Starlink router. The powerful omnidirectional AP1200F outdoor wireless access point connects to the GIS-K1. Homes within a range of 1 Km with line of sight to the AP1200F antenna can connect to the Internet using the STAR-4 home installation kit.
- The GIS-K1 sets rules for Internet access so that the service from one Starlink antenna can be shared between many people, and to ensure that the Starlink data capacity is not exceeded which may result in a service interruption. The rules include the duration of access, maximum data speed, maximum data volume, and time at which the service can be used. Internet access is provided with a voucher that can be printed using the GIS-K1 or using the free Cloud service. The voucher access code has the rules for Internet access. Guest Internet has no other charges and the equipment is very easy to use so it is not necessary to rely on an 'expert' to operate the system; anyone can do it.
- The GIS-K1 is a WiFi Internet controller with all the features that are essential to manage the Starlink Internet service for many users. The STAR-15 kit includes the powerful AP1200F outdoor wireless access point with an omnidirectional antenna.

DESCRIPTION

- GIS-K1 Internet controller.
- AP1200F dual band outdoor wireless access point with omnidirectional antenna and PoE power supply
- Extension Ethernet cable.
- Free Cloud account to manage the service.
- Print vouchers using the GIS-R4 or using the Cloud account.
- Complete guide, how to connect, configure and provide your Internet service.
- The Starlink antenna is not included.

The AP1200F omnidirectional antenna is installed outdoors at a high point, such as the roof of a building. The installer has to provide the Ethernet cable that connects the AP1200F to the PoE supply.
