Guest Internet STAR-7 kit Internet Managed WiFi Products and Cloud Service

Product Specifications

- Product Name: STAR-7 kit
- Function: Wireless expansion for the STAR-6 kit
- Components:
    - Two WAP-1 indoor wireless access points
    - Ethernet cables
    - 12v power supplies
    - Complete guide on how to connect, configure, and provide Internet service
- Power Options for WAP-1: 12v power supply or PoE switch (48v PoE switch also supported)
- Language Support: English and Spanish
- Features: Guest Internet management, access code vouchers, failure monitoring, abuse protection, free support and upgrades, cloud service management, customizable branding

Product Usage Instructions

Installation

1. Connect the GIS-R4 controller to each WAP-1 wireless access point using Ethernet cables.
2. Power the WAP-1 units using the provided 12v power supplies or a PoE switch.
3. Refer to the complete guide for detailed instructions on connecting, configuring, and providing Internet service.

Management

- Print access code vouchers with specified duration, data speed, and limits for users.
- Monitor the service for any failures and set up alerts for immediate notification.
- Customize branding easily to personalize your Internet service.
- Utilize the free cloud service to manage the Internet service remotely from anywhere.

Frequently Asked Questions (FAQ)

- Q: Is the Starlink antenna included in the STAR-7 kit?
  A: No, the Starlink antenna is not included in the STAR-7 kit. You will need to provide the antenna separately.
- Q: Can the WAP-1 wireless access points be powered by a PoE switch?
  A: Yes, the WAP-1 units can be powered either by the provided 12v power supplies or by a PoE switch. A 48v PoE switch can also be used if required.
- Q: How can I get further information or support?
  A: For additional information or support, you can call 1-**800-213-0106** or visit our website at www.guest-internet.com. You can also reach out to Fire4 Systems Inc., Guest Internet Solutions located in Miami, FL, USA.

STAR-7 kit
An easy-to-install kit that adds two wireless access points for the STAR-6 kit using your Starlink

- Share or sell an Internet service to a community using Guest Internet to manage the Starlink service.
- Everything you need in one kit to start providing a community Internet service using your Starlink antenna.
- We have a selection of ready-to-use complete kits with full installation instructions, using high-performance products.
- Easy self-install and management of the Internet service, you do not depend on others.
- Multi-language: English and Spanish.
- Print vouchers with access codes to give people access: duration, data speed and data limits.
- Monitor the service for failures: get alerts.
- Protection from abuse of the Internet service; prevents unauthorized Internet access.
- No other fees, maintenance, license, software, services or contracts.
- Free support, free upgrades.
- Free cloud service; manage the Internet from anywhere.
- Branding is easy to customize your Internet service.

Community Internet using Starlink: easy to install and operate

Many communities have apartment buildings with limited or no Internet service. The STAR-6 and STAR-7 kits are designed to operate with a Starlink antenna to provide a managed Internet service for an apartment building. The Starlink Internet operates almost everywhere in the world and can be shared with residents in a community when the Internet service is managed using a Guest Internet controller. The unique Guest Internet features maintain good Internet performance for many users while ensuring that Starlink requirements are not exceeded.

The STAR-7 kit is a wireless expansion for the STAR-6 kit

The STAR-7 kit adds wireless access points to the STAR-6 apartment building kit so that a larger area can have WiFi access. Each WAP-1 wireless access point connects to the GIS-R4 provided with the STAR-6 kit. The WAP-1 wireless access points are installed throughout the building to provide good wireless coverage. The GIS-R4 sets rules for Internet access so that the service from one Starlink antenna can be shared between many people, and to ensure that the Starlink data capacity is not exceeded which may result in a service interruption.

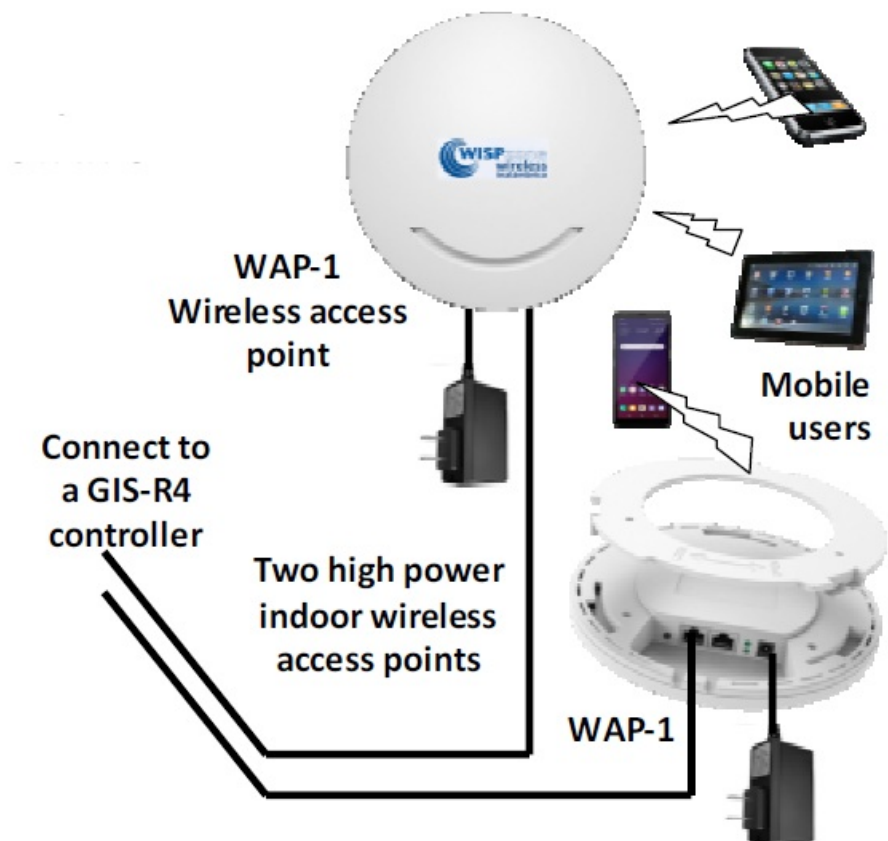

The STAR-7 kit provides wireless expansion for the STAR-6 kit

- Two of the WAP-1 indoor wireless access points
- Ethernet cables
- 12v power supplies
- Complete guide, how to connect, configure and provide your Internet service
- The Starlink antenna is not included

The installer has to provide the Ethernet cable that connects the GIS-R4 to each WAP-1 wireless unit. The WAP-1 can be powered with the 12v supply provided, or with a PoE switch.
If required each WAP-1 wireless access point can be powered from a 48v PoE switch.
