- Nutanix Prism

A change in hosting arrangements meant HC Networks needed to bring its virtual desktop infrastructure (VDI) back in house. To support the environment, the company introduced a hyperconverged infrastructure (HCI) solution based on Lenovo ThinkAgile HX Series appliances, featuring 2nd Gen Intel® Xeon® processors and Nutanix software, improving the efficiency of VDI server operations while keeping costs and management effort to a minimum.

“The virtualized infrastructure based on Lenovo ThinkAgile HX Series, with its high reliability and high maintainability unique to HCI, will strongly support our business.”

Mr. Yoshio Nakayama,

Business Administration

Department Manager, Information System Group, HC Networks
