HERCULES

HERCULES HE041 Variable Speed Fixed Base Router with Plunge Base Kit

IMPORTANT SAFETY INFORMATION

General Power Tool Safety Warnings

Read all safety warnings, instructions, illustrations and specifications provided with this power tool. Failure to follow all instructions listed below may result in electric shock, fire and/or serious injury.

Save all warnings and instructions for future reference.

The term “power tool” in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

1. Work area safety

- **a.** Keep work area clean and well lit.
Cluttered or dark areas invite accidents.
- **b.** Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
- **c.** Keep children and bystanders away while operating a power tool. Distractions can cause you to lose control.

2. Electrical safety

- **a.** Power tool plugs must match the outlet. Never modify the plug in any way. Do not use any adapter plugs with earthed (grounded) power tools. Unmodified plugs and matching outlets will reduce risk of electric shock.
- **b.** Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.
- **c.** Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.
- **d.** Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep

cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.

- **e.** When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.
- **f.** If operating a power tool in a damp location is unavoidable, use a ground fault circuit interrupter (GFCI) protected supply. Use of a GFCI reduces the risk of electric shock.

3. Personal safety

- **a.** Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.
- **b.** Use personal protective equipment. Always wear eye protection. Protective equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.
- **c.** Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or battery pack, picking up or carrying the tool. Carrying power tools with your finger on the switch or energizing power tools that have the switch on invites accidents.
- **d.** Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.
- **e.** Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.
- **f.** Dress properly. Do not wear loose clothing or jewelry. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewelry or long hair can be caught in moving parts.
- **g.** If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used. Use of dust collection can reduce dust-related hazards.
- **h.** Do not let familiarity gained from frequent use of tools allow you to become complacent and ignore tool safety principles. A careless action can cause severe injury within a fraction of a second.
- **i.** Only use safety equipment that has been approved by an appropriate standards agency. Unapproved safety equipment may not provide adequate protection. Eye protection must be ANSI-approved and breathing protection must be NIOSH-approved for the specific hazards in the work area.
- **j.** Avoid unintentional starting. Prepare to begin work before turning on the tool.
- **k.** Do not lay the tool down until it has come to a complete stop. Moving parts can grab the surface and pull the tool out of your control.
- **l.** When using a handheld power tool, maintain a firm grip on the tool with both hands to resist starting torque.
- **m.** Do not depress the spindle lock when starting or during operation.
- **n.** Do not leave the tool unattended when it is plugged into an electrical outlet. Turn off the tool, and unplug it from its electrical outlet before leaving.
- **o.** This product is not a toy. Keep it out of reach of children.
- **p.** People with pacemakers should consult their physician(s) before use. Electromagnetic fields in close proximity to heart pacemaker could cause pacemaker interference or pacemaker failure. In addition, people with pacemakers should:
 - Avoid operating alone.
 - Do not use with Power Switch locked on.
 - Properly maintain and inspect to avoid electrical shock.

- Properly ground power cord. Ground Fault Circuit Interrupter (GFCI) should also be implemented – it prevents sustained electrical shock.
- **q.** The warnings, precautions, and instructions discussed in this instruction manual cannot cover all possible conditions and situations that may occur. It must be understood by the operator that common sense and caution are factors which cannot be built into this product, but must be supplied by the operator.

4. Power tool use and care

- **a.** Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.
- **b.** Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- **c.** Disconnect the plug from the power source and/or remove the battery pack, if detachable, from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.
- **d.** Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained users.
- **e.** Maintain power tools and accessories. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tool's operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.
- **f.** Keep cutting tools sharp and clean. Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.
- **g.** Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the work to be performed. Use of the power tool for operations different from those intended could result in a hazardous situation.
- **h.** Keep handles and grasping surfaces dry, clean and free from oil and grease. Slippery handles and grasping surfaces do not allow for safe handling and control of the tool in unexpected situations.

5. Service

- **a.** Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.
- **b.** Maintain labels and nameplates on the tool. These carry important safety information. If unreadable or missing, contact Harbor Freight Tools for a replacement.

6. Safety instructions for routers

- **a.** Hold the power tool by insulated gripping surfaces only, because the cutter may contact its own cord. Cutting a "live" wire may make exposed metal parts of the power tool "live" and could give the operator an electric shock.
- **b.** Use clamps or another practical way to secure and support the workpiece to a stable platform. Holding the work by your hand or against the body leaves it unstable and may lead to loss of control.
- **c.** Let bit cool before touching, changing or adjusting it. Bits heat up dramatically while in use, and can burn you.
- **d.** Verify that the work surface has no hidden utility lines before cutting.

7. Vibration Safety

This tool vibrates during use. Repeated or long-term exposure to vibration may cause temporary or permanent

physical injury, particularly to the hands, arms and shoulders. To reduce the risk of vibration-related injury:

- **a.** Anyone using vibrating tools regularly or for an extended period should first be examined by a doctor and then have regular medical check-ups to ensure medical problems are not being caused or worsened from use. Pregnant women or people who have impaired blood circulation to the hand, past hand injuries, nervous system disorders, diabetes, or Raynaud's Disease should not use this tool. If you feel any symptoms related to vibration (such as tingling, numbness, and white or blue fingers), seek medical advice as soon as possible.
- **b.** Do not smoke during use. Nicotine reduces the blood supply to the hands and fingers, increasing the risk of vibration-related injury.
- **c.** Wear suitable gloves to reduce the vibration effects on the user.
- **d.** Use tools with the lowest vibration when there is a choice.
- **e.** Include vibration-free periods each day of work.
- **f.** Grip tool as lightly as possible (while still keeping safe control of it). Let the tool do the work.
- **g.** To reduce vibration, maintain the tool as explained in this manual. If any abnormal vibration occurs, stop use immediately.

Grounding

TO PREVENT ELECTRIC SHOCK AND DEATH FROM INCORRECT GROUNDING WIRE

CONNECTION: Check with a qualified electrician if you are in doubt as to whether the outlet is properly grounded. Do not modify the power cord plug provided with the tool. Never remove the grounding prong from the plug. Do not use the tool if the power cord or plug is damaged. If damaged, have it repaired by a service facility before use. If the plug will not fit the outlet, have a proper outlet installed by a qualified electrician.

Grounded Tools: Tools with Three Prong Plugs

3-Prong Plug and Outlet

1. Tools marked with "Grounding Required" have a three wire cord and three prong grounding plug. The plug must be connected to a properly grounded outlet.
If the tool should electrically malfunction or break down, grounding provides a low resistance path to carry electricity away from the user, reducing the risk of electric shock. (See 3-Prong Plug and Outlet.)
2. The grounding prong in the plug is connected through the green wire inside the cord to the grounding system in the tool. The green wire in the cord must be the only wire connected to the tool's grounding system and must never be attached to an electrically "live" terminal. (See 3-Prong Plug and Outlet.)
3. The tool must be plugged into an appropriate outlet, properly installed and grounded in accordance with all

codes and ordinances. The plug and outlet should look like those in the preceding illustration. (See 3-Prong Plug and Outlet.)

Double Insulated Tools: Tools with Two Prong Plugs

Outlets for 2-Prong Plug

1. Tools marked “Double Insulated” do not require grounding. They have a special double insulation system which satisfies OSHA requirements and complies with the applicable standards of Underwriters Laboratories, Inc., the Canadian Standard Association, and the National Electrical Code.
2. Double insulated tools may be used in either of the 120 volt outlets shown in the preceding illustration. (See Outlets for 2-Prong Plug.)

Extension Cords

1. Grounded tools require a three wire extension cord. Double Insulated tools can use either a two or three wire extension cord.
2. As the distance from the supply outlet increases, you must use a heavier gauge extension cord. Using extension cords with inadequately sized wire causes a serious drop in voltage, resulting in loss of power and possible tool damage. (See Table A.)
3. The smaller the gauge number of the wire, the greater the capacity of the cord. For example, a 14 gauge cord can carry a higher current than a 16 gauge cord. (See Table A.)
4. When using more than one extension cord to make up the total length, make sure each cord contains at least the minimum wire size required. (See Table A.)
5. If you are using one extension cord for more than one tool, add the nameplate amperes and use the sum to determine the required minimum cord size. (See Table A.)
6. If you are using an extension cord outdoors, make sure it is marked with the suffix “W-A” (“W” in Canada) to indicate it is acceptable for outdoor use.
7. Make sure the extension cord is properly wired and in good electrical condition. Always replace a damaged extension cord or have it repaired by a qualified electrician before using it.
8. Protect the extension cords from sharp objects, excessive heat, and damp or wet areas.

| TABLE A: RECOMMENDED MINIMUM WIRE GAUGE FOR EXTENSION CORDS* (120/240 VOLT) | | | | | |
|---|-----------------------|-----|-----|------|------|
| NAMEPLATE AMPERES (at full load) | EXTENSION CORD LENGTH | | | | |
| | 25' | 50' | 75' | 100' | 150' |
| 0 – 2.0 | 18 | 18 | 18 | 18 | 16 |
| 2.1 – 3.4 | 18 | 18 | 18 | 16 | 14 |
| 3.5 – 5.0 | 18 | 18 | 16 | 14 | 12 |
| 5.1 – 7.0 | 18 | 16 | 14 | 12 | 12 |
| 7.1 – 12.0 | 18 | 14 | 12 | 10 | – |
| 12.1 – 16.0 | 14 | 12 | 10 | – | – |
| 16.1 – 20.0 | 12 | 10 | – | – | – |
| * Based on limiting the line voltage drop to five volts at 150% of the rated amperes. | | | | | |

Warning Symbols and Definitions

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

- **DANGER:** Indicates a hazardous situation which, if not avoided, will result in death or serious injury.
- **WARNING:** Indicates a hazardous situation which, if not avoided, could result in death or serious injury.
- **CAUTION:** Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.
- **NOTICE:** Addresses practices not related to personal injury.

Symbology

| | |
|--|---|
|  | Double Insulated |
| V | Volts |
| ~ | Alternating Current |
| A | Amperes |
| n0 xxxx/min. | No Load Revolutions per Minute (RPM) |
|  | WARNING marking concerning Risk of Eye Injury. Wear ANSI-approved safety goggles with side shields. |
|  | Read the manual before set-up and/or use. |
|  | WARNING marking concerning Risk of Fire. Do not cover ventilation ducts. Keep flammable objects away. |
|  | WARNING marking concerning Risk of Electric Shock. Properly connect power cord to appropriate outlet. |

SPECIFICATIONS

| | |
|-------------------|-------------------------------------|
| Electrical Rating | 120 VAC / 60 Hz / 12 A |
| No Load Speed | n ₀ : 10,000 –25,000/min |
| Collet Sizes | 1/4" • 1/2" |
| Max Plunge Depth | 2" |

SET UP BEFORE USE

Read the ENTIRE IMPORTANT SAFETY INFORMATION section at the beginning of this manual including all text under subheadings therein before set up or use of this product.

Assembly

Dust Extraction Adaptor Attachment For Fixed Base

1. Align the two raised ribs on the Dust Extraction Adaptor with the slots on the Dust Port located on the back of the Fixed Base.
2. Insert the Adaptor into the Dust Port.

3. Rotate the Adaptor clockwise until it is secured on the Base.

For Plunge Base

1. Position the Dust Extraction Adaptor on the bottom of the Plunge Base as shown.
2. Secure the Adaptor in place with the two screws included.

Dust Extraction Setup

Connect a dust collection system (sold separately) to the Dust Extraction Adaptor on the Fixed or Plunge Base. A 1-1/4" diameter vacuum hose can be connected to either Adaptor.

Chip Shield Attachment For Fixed Base

1. Place the Chip Shield in position and flex the sides of the Shield while pushing in until it snaps into place.
2. To remove press inward on the tabs until the Chip Shield releases from the Base, then remove.

For Plunge Base

1. Place the slot on the bottom of the Chip Shield onto the screw on the Plunge Base.
2. Slide the Chip Shield to the right side to lock in place.
3. To remove slide Chip Shield to the left side and remove it from the Base.

Edge Guide Assembly

1. Insert two Edge Guide Rods into the holes on the Edge Guide.
2. Secure the Edge Guide Rods in place using two screws (included).

Work Area

1. Designate a work area that is clean and well lit. The work area must not allow access by children or pets to prevent distraction and injury.
2. There must not be objects, such as utility lines, nearby that will present a hazard while working.
3. Route the power cord along a safe route to reach the work area without creating a tripping hazard or exposing the power cord to possible damage. The power cord must reach the work area with enough extra length to allow free movement while working.

Functions

OPERATING INSTRUCTIONS

Read the ENTIRE IMPORTANT SAFETY INFORMATION section at the beginning of this manual including all text under subheadings therein before set up or use.

Tool Set Up

Warning:

TO PREVENT SERIOUS INJURY FROM ACCIDENTAL OPERATION: Make sure that the Power Switch is in the off-position and unplug the tool from its electrical outlet before performing any procedure in this section.

Changing the Collet

The Router is equipped with a 1/2" Collet installed on the tool for use with 1/2" shank cutting bits. To use 1/4" shank cutting bits the 1/4" Collet Sleeve must be installed inside the 1/2" Collet.

1. To install the 1/4" Collet Sleeve, remove the Router Motor Housing from the Fixed or Plunge Base.
2. Place the Motor Housing upside down on its top with the Collet pointing up.
3. Press the Spindle Lock in to keep the Spindle and 1/2" Collet from turning.
4. Using the included wrench, turn the 1/2" Collet counterclockwise to loosen.

5. Insert the 1/4" Collet Sleeve into the 1/2" Collet Assembly as far as it will go.

6. Press the Spindle Lock in and turn the 1/2" Collet clockwise with the wrench to tighten the Sleeve in place.

Installing the Cutting Bit

WARNING! TO PREVENT SERIOUS INJURY: Carefully inspect cutting bits for cracks, chips, or other damage before installing. Do not use bits that have been dropped, cracked, or damaged. The bit may shatter causing serious injury.

1. Use only bits whose shank size matches that of the installed 1/2" Collet or 1/4" Collet Sleeve.

2. Use only bits that are marked as suitable for the type of material being cut.
3. Use only bits that are marked with a speed equal or higher than the speed marked on the tool.
4. Remove the Router Motor Housing from the Fixed or Plunge Base.
5. Place the Motor Housing upside down on its top with the Collet pointing up.
6. Press the Spindle Lock in to keep the Spindle and 1/2" Collet from turning.
7. Use the wrench to turn the 1/2" Collet counterclockwise to loosen.

8. Insert the shank end of the cutting bit (sold separately) into the 1/2" Collet Assembly (or 1/4" Collet Sleeve if using) as far as it will go, then back the bit out approximately 1/8"—1/4" away from the Collet face.
9. Press the Spindle Lock in and turn the 1/2" Collet clockwise with the wrench to tighten the cutting bit securely in place.

Installing the Motor Housing

For Fixed Base

1. Place the Fixed Base on a flat surface with the back of the Base facing you and open the Motor Housing Clamp.
2. Press the Depth Adjustment Button and align the arrow on the Motor Housing with the arrow on the Fixed Base.
3. Slide the Housing down into the Fixed Base.

4. The Motor Housing will now slide up or down when the Depth Adjustment Button is pressed in.
5. After all adjustments are made, close the Motor Housing Clamp securely.

For Plunge Base

1. Place the Plunge Base on a flat surface with the back of the Base facing you and open the Motor Housing Clamp.
2. Make sure that the plunge action is in the "DOWN" position with the Plunge Depth Lock Lever locked.
3. Align the arrow on the Motor Housing with the arrow on the Plunge Base and lower the Housing into the Base.

4. Slide the Motor Housing into the Plunge Base as far as it will go.
5. Close the Motor Housing Clamp securely.

Edge Guide Installation

For Fixed Base

1. Insert the Edge Guide rods into the mounting slots on the Fixed Base from the left or right side. Adjust the Edge Guide to the desired position.
2. Secure the Edge Guide by turning the two Quick Release Levers toward the tool handles.

For Plunge Base

1. Insert the Edge Guide rods into the mounting slots on the Plunge Base from the left or right side. Adjust the Edge Guide to the desired position.
2. Tighten the two Lock Knobs to secure the Edge Guide in place.

Setting and Testing

TO PREVENT SERIOUS INJURY FROM ACCIDENTAL OPERATION: Make sure that the Power Switch is in the off-position and unplug the tool from its electrical outlet before performing any procedure in this section.

Depth Adjustment – Fixed Base

1. Install the Cutting Bit as previously described.
2. Press the Depth Adjustment Button and raise or lower the Motor Housing to place the cutting bit at an approximate depth setting.

3. For marginal depth adjustments, use the Micro-Fine Depth Adjustment Knob to set the exact desired depth of cut. The Depth Indicator Ring on the Knob is marked in $\frac{1}{256}$ " (0.1 mm) increments.
- a. For example, turning the Depth Adjustment Knob counterclockwise 180° ($\frac{1}{2}$ turn) will lower the cutting bit $\frac{1}{32}$ " (0.8 mm).
 - b. Turning the Depth Adjustment Knob counterclockwise 360° (1 full turn) will lower the cutting bit $\frac{1}{16}$ " (1.6 mm).

Note: The Depth Indicator Ring can be reset to zero "0" without moving the Micro-Fine Depth Adjustment Knob, allowing adjustments to begin from any reference point.

Note: Make a test cut on a piece of scrap material to ensure that the adjustment is correct.

Depth Adjustment Plunge Base

Basic Depth Setting

1. Move the Plunge Depth Lock Lever up to the unlocked position.
2. Grip both Plunge Base Handles and apply downward pressure on the plunge action until the cutting bit reaches the desired depth.
3. Move the Plunge Depth Lock Lever down to the locked position.

Depth Setting with Depth Rod / Depth Stop Turret

1. With the cutting bit installed, lower the Motor Housing until the tip of the bit contacts the work surface.
2. Rotate the Depth Stop Turret to the lowest setting.
3. Loosen the Depth Stop Lock Knob and lower the Depth Stop Rod until it contacts the lowest step of the Turret.
4. Slide the Depth Indicator to align the red line with zero on the Depth Scale, indicating the point where the bit contacts the work surface.
5. Slide the Depth Stop Rod up until the red Depth Indicator line aligns with the desired depth on the Depth Scale. Tighten the Depth Stop Lock Knob to secure the Stop Rod in position.

Micro Adjustment with Depth Rod / Depth Stop Turret

1. For marginal depth adjustments, use the Micro Depth Adjustment Knob. Each complete rotation of the Knob adjusts the plunging depth by approximately 1/32" (0.8mm). An indicator line is marked on the Depth Stop Rod under the Adjustment Knob to set a reference point of "0".
2. Before setting the Depth Stop Rod and Depth Stop Turret when adjusting plunge depth, turn the Micro Depth Adjustment Knob down (clockwise) several revolutions from the top.
3. After setting the Depth Stop Rod and Depth Stop Turret, turn the Adjustment Knob counterclockwise to increase depth the desired amount. To reduce the plunge depth, turn the Adjustment Knob clockwise to the desired amount.

Workpiece Set Up

1. Secure loose workpieces using a vise or clamps (not included) to prevent movement while working.
2. Make sure there are no metal objects in the wood which might make contact with the cutting bit.
3. Refer to maximum plunge depth in the Specifications Table on page 5 for limitations on workpiece size.

General Instructions for Use

1. Mark the surface of the material to be cut.
2. Make sure that the Power Switch is in the Off-position, then plug the Power Cord into the nearest 120 volt, grounded electrical outlet.
WARNING! TO PREVENT SERIOUS INJURY: Verify that the work surface has no hidden utility lines before cutting.
3. Push the Power Switch to the On-position to turn on the Router.
4. Adjust the Router speed to suit the working material and bit diameter. To adjust speed, turn the Speed Control Dial from 1 (the slowest speed) to 6 (the fastest speed). Use lower settings for large diameter bits and higher

settings for small diameter bits.

Note: Determine the optimum speed by testing in scrap material until you are able to produce a smooth cut with no burnishing or burn marks. Burn marks are caused by moving too slowly through the wood. Feeding the Router too quickly, or trying to remove too much material in a single pass creates a rough cut and can overload the motor.

5. Allow the cutting bit to reach full speed before contacting the workpiece.
6. Slowly engage the workpiece—do not force the Router down into the material.
7. The cutting bit rotates clockwise. Adjust for this while cutting:
 - a. For most materials it is best to move the Router from left to right as facing the workpiece.
 - b. When cutting outside edges, move the Router counterclockwise. When cutting inside edges, move the Router clockwise.
 - c. On vertical surfaces, start and end the cut at the top to prevent scrap material from falling onto the rotating bit.

Note: Use two or more passes for deep cuts, especially in the case of hardwood. Turn the Depth Stop Turret to the highest step to start, then rotate the Turret one step for each progressive pass until the final depth is achieved. Each step on the Turret progresses in 1/4" (6.4mm) increments totaling 3/4" (19mm) of adjustment with one full turn (360°) of the Turret.

WARNING! TO PREVENT SERIOUS INJURY: The tool will restart automatically if stalled.

8. After completing the cut, raise the Router so the cutting bit is clear of the material and push the Power Switch to the Off-position. Do not set the Router down until the bit has come to a complete stop.
9. To prevent accidents, turn off the tool and unplug it after use. Clean, then store the tool indoors out of children's reach.

MAINTENANCE AND SERVICING

Procedures not specifically explained in this manual must be performed only by a qualified technician.

WARNING:

TO PREVENT SERIOUS INJURY FROM ACCIDENTAL OPERATION: Make sure that the Power Switch is in the Off-position and unplug the tool from its electrical outlet before performing any procedure in this section.

TO PREVENT SERIOUS INJURY FROM

TOOL FAILURE: Do not use damaged equipment. If abnormal noise or vibration occurs, have the problem corrected before further use.

Cleaning, Maintenance, and Lubrication

1. BEFORE EACH USE, inspect the general condition of the tool. Check for:
 - loose hardware
 - misalignment or binding of moving parts
 - cracked or broken parts
 - damaged cord/electrical wiring
 - any other condition that may affect its safe operation.
2. AFTER USE, wipe external surfaces of the tool with clean cloth.
3. Periodically, wear ANSI-approved safety goggles and NIOSH-approved breathing protection and blow dust out of the motor vents using dry compressed air.

4. Periodically wipe the Collet and cutting bits with a light oil to prevent rust.
5. Over time, if the performance of the tool diminishes, or it stops working completely, it may be necessary to replace the Carbon Brushes.

This procedure must be completed by a qualified technician.

6. WARNING! TO PREVENT SERIOUS

INJURY: If the supply cord of this power tool is damaged, it must be replaced only by a qualified service technician.

Troubleshooting

| Problem | Possible Causes | Likely Solutions |
|---|--|--|
| Tool will not start. | <ol style="list-style-type: none"> 1. Cord not connected. 2. No power at outlet. 3. Tool's thermal reset breaker tripped (if equipped). 4. Internal damage or wear. (Carbon brushes or Power Switch, for example.) | <ol style="list-style-type: none"> 1. Check that cord is plugged in. 2. Check power at outlet. If outlet is unpowered, turn off tool and check circuit breaker. <p>If breaker is tripped, make sure circuit is right capacity for tool and circuit has no other loads.</p> <ol style="list-style-type: none"> 3. Turn off tool and allow to cool. Press reset button on tool. 4. Have qualified technician service tool. |
| Tool operates slowly. | <ol style="list-style-type: none"> 1. Forcing tool to work too fast. 2. Extension cord too long or cord diameter too small. | <ol style="list-style-type: none"> 1. Allow tool to work at its own rate. 2. Eliminate use of extension cord. If an extension cord is needed, use one with the proper diameter for its length and load. See <i>Extension Cords</i> on page 4. |
| Performance decreases over time. | <ol style="list-style-type: none"> 1. Carbon brushes worn or damaged. 2. Cutting bit dull or damaged. | <ol style="list-style-type: none"> 1. Have qualified technician replace brushes. 2. Use sharp bits. Replace as needed. |
| Excessive noise or rattling. | Internal damage or wear. (Carbon brushes or bearings, for example.) | Have qualified technician service tool. |
| Overheating. | <ol style="list-style-type: none"> 1. Forcing tool to work too fast. 2. Cutting bit dull or damaged. 3. Blocked motor housing vents. 4. Motor being strained by long or small diameter extension cord | <ol style="list-style-type: none"> 1. Allow tool to work at its own rate. 2. Use sharp bits. Replace as needed. 3. Wear ANSI-approved safety goggles and NIOSH-approved dust mask/respirator while blowing dust out of motor using compressed air. 4. Eliminate use of extension cord. If an extension cord is needed, use one with the proper diameter for its length and load. See <i>Extension Cords</i> on page 4. |
| Follow all safety precautions whenever diagnosing or servicing the tool. Disconnect power supply before service. | | |

Record Product's Serial Number Here:

Note: If product has no serial number, record month and year of purchase instead. Note: Replacement parts are not available for this item. Refer to UPC 792363573689

LIMITED 90 DAY WARRANTY

Harbor Freight Tools Co. makes every effort to assure that its products meet high quality and durability standards, and warrants to the original purchaser that this product is free from defects in materials and workmanship for the period of 90 days from the date of purchase. This warranty does not apply to damage due directly or indirectly, to

misuse, abuse, negligence or accidents, repairs or alterations outside our facilities, criminal activity, improper installation, normal wear and tear, or to lack of maintenance. We shall in no event be liable for death, injuries to persons or property, or for incidental, contingent, special or consequential damages arising from the use of our product. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation of exclusion may not apply to you.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS. To take advantage of this warranty, the product or part must be returned to us with transportation charges prepaid. Proof of purchase date and an explanation of the complaint must accompany the merchandise. If our inspection verifies the defect, we will either repair or replace the product at our election or we may elect to refund the purchase price if we cannot readily and quickly provide you with a replacement. We will return repaired products at our expense, but if we determine there is no defect, or that the defect resulted from causes not within the scope of our warranty, then you must bear the cost of returning the product. This warranty gives you specific legal rights and you may also have other rights which vary from state to state.
