CUBE GRID

	Always wear fire-proof gloves (e.g. BBQ gloves) when grilling with CUBE.
	Wear respective clothing. Long, loose sleeves quickly catch fire!

- Kindly remove the rubber caps of the wire ends before doing BBQ.
- Clean the cooking grate prior to first use.
- Do not start the grilling process before the charcoal is covered by a small ash layer.
This process takes approx. 30-45 minutes.
- Take the cooking grate at the wire handles and place it on CUBE.
The rods protruding laterally thus lie on the sheet edge of CUBE.
The vertical rods contact the inner side of the basket, the cooking grid thus being slightly twisted as regards the position of the basket.
- The cooking grid is adjustable in height.
Take the cooking grate at the wire handles and slightly twist the handles clockwise.
The protruding rods now no longer lie on the sheet edge of CUBE and the cooking grid can be lowered.
If you turn back the cooking grid anticlockwise, the rods protrude the breakouts of the basket and lie on its sheet edges.
