## Touch Panel Switch

**SKU: HG-TS10**

## Quickstart

This is a

On/Off Power Switch  
for  
**CEPT (Europe).**

To run this device please connect it to your mains power supply.

To add this device to your network execute the following action:

To include, Touch and hold any button for more than 5 seconds. LED light blinks to indicate inclusion mode.

Please refer to the [Manufacturers Manual](#) for more information.

## Important safety information

Please read this manual carefully. Failure to follow the recommendations in this manual may be dangerous or may violate the law.

The manufacturer, importer, distributor and seller shall not be liable for any loss or damage resulting from failure to comply with the instructions in this manual or any other material.

Use this equipment only for its intended purpose. Follow the disposal instructions.

Do not dispose of electronic equipment or batteries in a fire or near open heat sources.

## What is Z-Wave?

Z-Wave is the international wireless protocol for communication in the Smart Home. This device is suited for use in the region mentioned in the Quickstart section.

Z-Wave ensures a reliable communication by reconfirming every message (**two-way communication**) and every mains powered node can act as a repeater for other nodes (**meshed network**) in case the receiver is not in direct wireless range of the transmitter.

This device and every other certified Z-Wave device can be **used together with any other certified Z-Wave device regardless of brand and origin** as long as both are suited for the same frequency range.

If a device supports **secure communication** it will communicate with other devices secure as long as this device provides the same or a higher level of security. Otherwise it will automatically turn into a lower level of security to maintain backward compatibility.

For more information about Z-Wave technology, devices, white papers etc. please refer to [www.z-wave.info](http://www.z-wave.info).

## Product Description

Your smart home deserves better than an ordinary light switch. Hogar touch panels are one-of-a-kind collection of switches that will transform walls from boring to an absolutely breath-taking. Fits in existing electrical boxes and does not require new wires. Innovative assembly and snap-in system make it fast and simple to install. Hogar touch panels are the modern creation of switch range that sets the tone in every room. The series makes a convincing impression with its clear structure and its choice of customized color variants. The colored glass frames come in Black, White, Moroccan Blue, Nature Green, Wooden Brown, Elegant Grey, while the metal frames are colored in Black, White, Grey and Rose Gold. Some highlights of the smart features-A touch can do more – Programmable touch buttons to act as a Toggle or Mono stable mode. Mono stable mode can give additional advantage of running scenes when used with Z-wave Home controller. -Uniform dual back light LED with 2-way feedback-Optional custom label or logo design for each button-2 minutes installation with no additional wiring-Heat, Humidity and Shock proof design, No worries in wet or hot areas-A perfect match for LED loads with protective inrush current

## Prepare for Installation / Reset

Please read the user manual before installing the product.

In order to include (add) a Z-Wave device to a network it **must be in factory default state**. Please make sure to reset the device into factory default. You can do this by performing an Exclusion operation as described below in the manual. Every Z-Wave controller is able to perform this operation however it is recommended to use the primary controller of the previous network to make sure the very device is excluded properly from this network.

## Reset to factory default

This device also allows to be reset without any involvement of a Z-Wave controller. This procedure should only be used when the primary controller is inoperable.

To reset , press and hold first button(left top) for more than 15 seconds. LED lights turn OFF and ON to indicate reset. Note : Please use this procedure only when the network primary controller is missing or otherwise inoperable.

## Safety Warning for Mains Powered Devices

ATTENTION: only authorized technicians under consideration of the country-specific installation guidelines/norms may do works with mains power. Prior to the assembly of the product, the voltage network has to be switched off and ensured against re-switching.

## Inclusion/Exclusion

On factory default the device does not belong to any Z-Wave network. The device needs to be **added to an existing wireless network** to communicate with the devices of this network. This process is called **Inclusion**.

Devices can also be removed from a network. This process is called **Exclusion**. Both processes are initiated by the primary controller of the Z-Wave network. This controller is turned into exclusion respective inclusion mode. Inclusion and Exclusion is then performed doing a special manual action right on the device.

### Inclusion

To include, Touch and hold any button for more than 5 seconds. LED light blinks to indicate inclusion mode.

### Exclusion

To exclude, Touch and hold any button for more than 5 seconds. LED light blinks to indicate exclusion mode.

## Quick trouble shooting

Here are a few hints for network installation if things dont work as expected.

1. Make sure a device is in factory reset state before including. In doubt exclude before include.
2. If inclusion still fails, check if both devices use the same frequency.
3. Remove all dead devices from associations. Otherwise you will see severe delays.
4. Never use sleeping battery devices without a central controller.
5. Dont poll FLIRS devices.
6. Make sure to have enough mains powered device to benefit from the meshing

## Association – one device controls an other device

Z-Wave devices control other Z-Wave devices. The relationship between one device controlling another device is called association. In order to control a different device, the controlling device needs to maintain a list of devices that will receive

controlling commands. These lists are called association groups and they are always related to certain events (e.g. button pressed, sensor triggers, ...). In case the event happens all devices stored in the respective association group will receive the same wireless command wireless command, typically a 'Basic Set' Command.

## Association Groups:

Group NumberMaximum NodesDescription

1	1	Z-Wave Plus Lifeline
2	5	Profile: Control key01Commands: Basic SetGroup name: HGT-01
3	5	Profile: Control key01Commands: Switch Binay SetGroup name: HGT-01
4	5	Profile: Control key02Commands: BasicGroup name: HGT-02

7	5	Profile: Control key03Commands: Switch Binay SetGroup name: HGT-03
8	5	Profile: Control key04Commands: BasicGroup name: HGT-04
9	5	Profile: Control key04Commands: Switch Binay SetGroup name: HGT-04

## Technical Data

Hardware Platform	ZM5202
Device Type	On/Off Power Switch
Network Operation	Always On Slave
Firmware Version	HW: 36 FW: 2.03
Z-Wave Version	6.61.00
Certification ID	ZC10-17055586
Z-Wave Product Id	0x0293.0x0003.0x001A
Firmware Updatable	Updatable by Professional/Technician
Switch Type	Dry Contact
Electric Load Type	ELV (Electronic)FluorescentIncandescentLED
Neutral Wire Required	ok
Loads Controlled	8
Communications Protocol	Z-Wave Z/IP
Frequency	XXfrequency
Maximum transmission power	XXantenna

## Supported Command Classes

- Association Grp Info

- Association V2
- Basic
- Device Reset Locally
- Firmware Update Md V2
- Manufacturer Specific V2
- Multi Channel Association V3
- Multi Channel V4
- Powerlevel
- Switch Binary
- Version V2
- Zwaveplus Info V2

## Controlled Command Classes

- Basic
- Switch Binary

## Explanation of Z-Wave specific terms

- **Controller** — is a Z-Wave device with capabilities to manage the network.  
Controllers are typically Gateways, Remote Controls or battery operated wall controllers.
- **Slave** — is a Z-Wave device without capabilities to manage the network.  
Slaves can be sensors, actuators and even remote controls.
- **Primary Controller** — is the central organizer of the network. It must be a controller. There can be only one primary controller in a Z-Wave network.
- **Inclusion** — is the process of adding new Z-Wave devices into a network.
- **Exclusion** — is the process of removing Z-Wave devices from the network.
- **Association** — is a control relationship between a controlling device and a controlled device.
- **Wakeup Notification** — is a special wireless message issued by a Z-Wave device to announce that it is able to communicate.
- **Node Information Frame** — is a special wireless message issued by a Z-Wave device to announce its capabilities and functions.
