SCREWS
REQUIRED

**BUILT-IN
MISTING
SYSTEM**

Overview

Before you Start

Check the pack contents before attempting construction.

Location and Positioning

The seedlings in your greenhouse want an outdoor full-sun to part-sun position all year round, depending on the climate of your location. Where possible, the greenhouse should be positioned in a sheltered location protected from direct winds. Avoid very windy positions and spots where the frame may stand in water for long periods.

⑯		x1
⑰		x1

Assembly

Frame Assembly

◀ Assemble frame as shown. Metal tubes ①-⑤ push into plastic parts A-G and shelves ⑥ sit on the horizontal tubes.

Start with the base and work upwards. Tools are not required—hand assembly is suitable. We suggest wearing protective gloves during assembly.

⤴ Before covering the frame, use the frame pegs ⑦ to fasten down the assembled frame.

When assembled, check the frame is tightly pushed together in all directions. ➤

Misting System Connection

Connect up the black poly pipe ⑩ using the elbow ⑬ and joiners ⑫ to fit around the frame.

Trim the last piece of poly pipe as needed and place the end cap ⑭ onto the top end of the poly pipe and the snap-on connector ⑮ to the bottom end as shown below. Attach your garden hose to the snap-on connector.

Attach the poly pipe along the width of the top central beam and adjoining vertical corner poles with clips ⑪.

To insert the sprayers ⑮, punch six holes along the top length of poly pipe with the supplied punch ⑰. Twist the yellow end of the sprays into the punched holes.

Covering the Frame

Unzip the cover ⑨ door before fitting to the assembled frame. Failure to do so may cause damage to the cover. Secure the cover to the frame with the ties attached to the inside of the cover. For ease of access, the doorway can be rolled and tied up.

⚠ We recommend two people for this step to avoid damage to the cover

Fasten Down the Greenhouse

Ground stakes with guy ropes ⑧ are provided to secure the cover to the ground, along with pegs ⑦ for securing the frame. Lower corner angle points on the cover can also be used for extra security.

Maintenance

Cleaning and Storage

Wash off heavy dirt or dust deposits and remove bird droppings with soapy water. The cover may be removed from the whole structure, disassembled and stored when not in use.

⚠ CAUTION

Ensure the greenhouse is secured to the ground with pegs or weights. Ensure weight is placed evenly on shelves to avoid the possibility of the greenhouse tipping over. Ensure all poles and fittings are securely assembled prior to use. The method of securing will depend on the ground surface. The greenhouse should not be left out in windy conditions if it has not been secured to the ground. During extreme weather conditions or high winds, ensure the greenhouse is moved to a sheltered area and ensure it is secured to the ground using appropriate methods. The greenhouse should be disassembled when not in use.

Maximum loading: 10kg for each shelf.
