Hombli Smart Socket EU

Introduction

No matter where you are, control home electronics using your tablet or smartphone with the Hombli Smart Socket. You can turn devices on/off, check status, create schedules and set timers using the Hombli app.

Energy monitoring

Voice control

No hub required

Automate your (non-Smart) lights

If you have any lights in your house that cannot be replaced with a smart bulb, you can still turn the light smart with a smart socket. Turn these lights on automatically when it gets dark by connecting it to a smart socket.

After sunset

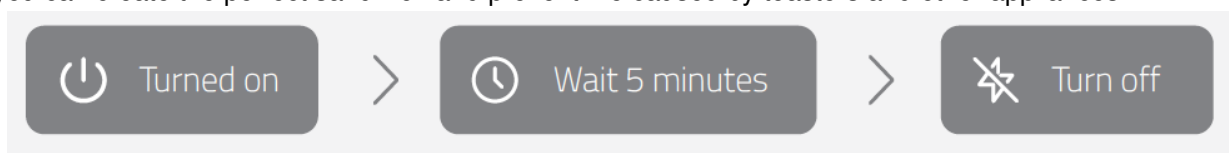

Turn on

Auto-off

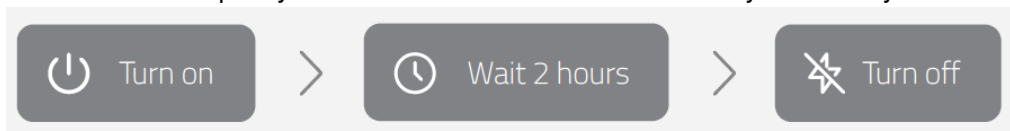

When the smart socket is turned on manually, the device will turn off automatically after the predefined time. This way you can create the perfect sandwich and prevent fire caused by toasters and other appliances.

Automated Aquarium

Your fishes can be pretty demanding at times, you don't want to give them too much light and other processes within the aquarium also can require your attention. But with a smart socket you can fully automate this.

Energy monitor

Are you trying to watch your energy bill, or want to minimize your impact on the planet?

With a smart socket you can, at all times, check how much energy any device you connect consumes, right in the Hombli app. Especially useful to see how much power older or big devices like a fridge are using, or how much energy your solar panel generated.
