## Using Instructions

“The EXR is a very innovative, high-performance audio stand system design with unprecedented performance value, modularity, customization (size and configuration), and upgrade options. You can even convert from an EXR Audio Stand System to a SXR, SXR Signature, or SXRC Audio Stand model in the future, while preserving a

majority of original system purchase price.”

The Patent Pending EXR Audio Stand System is the most cost-effective, high-performance audio stand system developed by HRS. This Patent Pending design has a unique asymmetrical 4-leg vertical support system that increases frame stiffness and overall performance compared to traditional 3 or 4-leg designs. The EXR Audio Stand System comprises a plinth consisting of billet-machined aluminum front trim, proprietary HRS constrained layer dampening system, as well as custom pressed resin fabric composite top and bottom plates. The vertical structure of the EXR Audio Stand System consists of a custom modular billet-machined aluminum support system with an internal energy dissipation system. Its extensive system configuration flexibility and infinite modularity, as well as its cost-effective design concept, produce true HRS performance at a lower price point than all of our current HRS Audio Stands.
