| DPI button + Forward click button | Increase LED brightness. There are 4 brightness levels: off, low, medium and high.  |

## HyperX NGenuity Software

To customize lighting, DPI presets and macro settings, download the HyperX NGenuity software here: [hyperxgaming.com/ngenuity](https://hyperxgaming.com/ngenuity).

Refer to the HyperX NGenuity Gaming Software manual for more information on functionalities.

## Mouse factory reset

If you are experiencing any issue with the mouse you can perform a factory reset. You will lose your custom LED profile and DPI presets by doing this.

| Function Keys  | Secondary Feature  |
|--|--|
| DPI button + Mouse wheel click<br><b>for 5 seconds</b> | Factory reset of the mouse and all on board memory settings. |
