fn	The "fn" key is used in combination with other keys to access special features.

FAQs

Bluetooth connectivity issues

Connection failed / Unable to connect

Please follow the troubleshooting steps below:

1. Please Please make sure that your iClever device and computer are within proximity of each other.
2. Try moving away at least 8 inches (20 cm) from metal and other sources of wireless signal.
3. Delete all Bluetooth connection records, turn Bluetooth off on the device, and turn it back on to refresh.
4. Connect again.
5. Try a different device to test.

Keystroke delay / Character repetition / Frequent disconnections

Please follow the troubleshooting steps below.

1. Restart your device and keyboard.
2. Charge the keyboard for 2 hours.
3. Check if any updates are running in the background that may cause the delay.
4. Make sure your operating system (OS) is up to date.
5. Try on a different device to test.
6. Try moving away from metal and other sources of wireless signal:

- Bluetooth Speakers, TWS, headphones, WiFi routers, Computer power supplies, Strong WiFi signals, Metal or metal wiring in the wall, and any device that could emit wireless waves:
- Microwave, cordless phones, baby monitors, wireless speakers, garage door openers.

Keyboards are not searched in the match list

Here are some troubleshooting tips to ensure that your iClever device is ready to connect.

1. Restart your Bluetooth device.
2. Make sure you are in Bluetooth pairing mode (the keyboard Bluetooth indicator will keep flashing when you are in Bluetooth pairing).
3. The pairing name may be shown as a keyboard icon (like 7B:08:22:19:27:B9).
4. Remove the iClever previous connection records and pair them again.

The output does not match the key symbols

- For Windows/iOS/Mac OS users
- Please ensure your input method corresponds to the keyboard layout. For example, if you are using an English(US) keyboard, please choose the English(US) input method.
- If you have it this way but the problem persists, please keep us updated.

For Android users

- Please ensure your input method corresponds to the keyboard layout by setting the Virtual Keyboard and the Physical Keyboard on your device.

Virtual Keyboard:

1. **Step:** Find the language-switching button which is usually represented by a globe icon on the virtual keyboard.
2. **Step:** Choose your language from the virtual keyboard. This will change the virtual keyboard layout to match your language.

Physical Keyboard:

1. **Step**: Go to the Settings menu on your device.

2. **Step**: Find and choose "Language and Input" on your Android device. You may need to follow a slightly different path depending on the brand of your device.
3. **Step**: Find the option related to the physical keyboard settings and choose your language layout for your physical keyboard.

Does not hold a charge

1. Try using another USB cable and connect it to a different power source to charge for 2 hours (e.g., a USB port on a computer or a different charging adapter).
2. Make sure that the voltage of the charger you are using is not greater than 5V. Higher voltage can potentially cause the keyboard to shut down.

- **Note:** the charging indicator will turn green once the battery is fully charged and please unplug the cable.
- Compatibility issues and scope of compatibility

Incompatible range at this stage:

- **Devices:** Steam deck, PlayStation (PS4, PS5), XBOX, Smart TV
- **System:** Linux all, Ubuntu all
- **Other:** 3rd party Bluetooth adapters 4.0 and below, remote desktop software

Range of compatibility at this stage:

- **System version:** Windows 8 or later, Mac OS 10.12 or later, iOS 9.0 or later, Android 6.0 or later, Chrome OS
