USE AND FUNCTIONS

Macro extension tubes allow us to approach objects much closer than with the minimum focus length of our lens. It allows photographing details with clarity and definition.

This extension tube is composed of 3 tubes that can be used separately or together, which allows you to reduce the minimum focus length to a lesser or greater extent. If you use a bigger ring, the focus length needed in relation to the object will be shorter.

These extension tubes have built-in Autofocus (AF) chips. These allow you to focus using the camera focus motor (lens) or to do it manually and achieve an accurate definition of a particular area of the photographed object.

This extension tube allows you to approach and photograph in detail the smallest objects: insects, fabric, jewellery, etc.

HOW TO MOUNT ON CAMERA

This extension tube must be positioned between the camera body and the lens. Follow the steps below to install it correctly:

1. Remove lens from the camera body. Ensure that no dust or dirt enters the camera sensor or the lens crystal to always achieve optimum photos.
2. Place the extension tube with the narrowest anchor ring facing camera. Insert it in the camera body so that the drawn dots on the camera body and extension ring match. Once it has been inserted, twist ring until you hear "click".
3. If you wish to install more than one extension ring, repeat step 2 over the already installed ring instead of doing it in the camera body.
4. Insert lens in the extension ring the same way as with the camera body. Match the two dots so that the lens is correctly fitted in. Then twist until you hear "click".
5. Ensure the AF mechanism works correctly.
6. Focus the object you wish to photograph from the necessary distance so that the object is inside the new focus range.
7. Your camera is now ready to shoot.

NOTE:

The minimum focus length varies depending on the ring you are using. The bigger the ring, the more it allows you to approach the object.

If you do not manage to focus, try to get closer and then move away little by little until you find the focus range.

This way you will be able to decide which extension ring you need to install to take your photos.

COMPATIBILITY

There are 2 different models, each one compatible with CANON or NIKON lenses depending on the mount type.

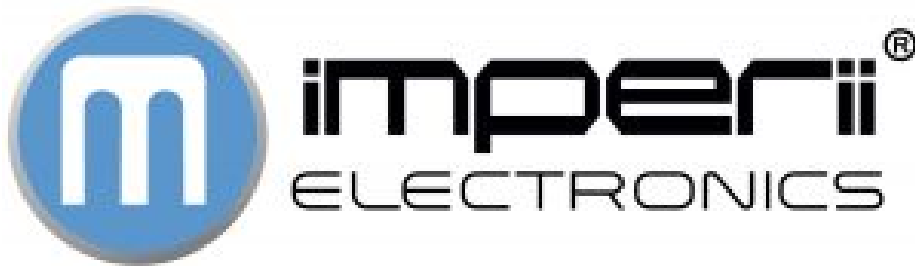

Limited Warranty

- ✓ This product is guaranteed for 2 years from the date of purchase.
- ✓ Warranty is effective since the commercial invoice duly is filled and sealed settlement.
- ✓ If there is any problem with the product, the user should contact us in the address:
sat@imperiielectronics.com. Once received, the doubts, incidents and problems will be resolved by email. If this is not possible and the problem persists, the guarantee will be processed in accordance with current law.
- ✓ The warranty is extended for two years, referring only to manufacturing defects
- ✓ The expedition to the nearest service center or our central office to be made prepaid. The item must arrive well packed and with all its components.
- ✓ Assume no liability for damages arising from misuse of the product
- ✓ The warranty does not apply in the following cases:

1. If you have not been followed this manual correctly
2. If the product has been tampered
3. If it has been damaged by improper use
4. If the defects have arisen as a result of power failures
