User Manual**

Contents

IVC1S Series Programmable Logic Controller

This quick start manual is to offer you a quick guide to the design, installation, connection and maintenance of IVC1S series PLC, convenient for on-site reference. Briefly introduced in this booklet are the hardware specs, features, and usage of IVC1S series PLC, plus the optional parts and FAQ for your reference. For ordering the above user manuals, contact your INVT distributor or sales office.

Introduction

1.1 Model Designation
The model designation is shown in the following figure.

```
IVC 1S -16 14 M  A R
```

Output mode. R: relay output; T: transistor output; N: no output

Power input mode (A: 220ac input; D: 24Vdc input); N: no external power input.

Module type.
M: Basic module. E: Extension module

Output points. In this example, 14.

Input points. In this example, 16.

Version number.

Series number. 1: mini; 2: small; 3: mid; 4: large.

INVT Controller module

To Customers:
Thank you for choosing our products. To improve the product and provide better service for you, could you please fill in the form after the product has been operated for 1 month, and mail or fax it to our Customer Service Center? We will send you an exquisite souvenir upon receiving the complete Product Quality Feedback Form. Furthermore, if you can give us some advices on improving the product and service quality, you will be awarded a special gift. Thank you very much!

1.2 Outline

The outline of the basic module is shown in the following figure by taking the example of IVC1S-1614MAR.
PORTO and PORT1 are communication terminals. PORTO uses RS232 mode with Mini DIN8 socket. PORT1 Has RS485. The mode selection switch has two positions:
ON and OFF.

1.3 Terminal Introduction

The layouts of terminals of different I/O points are shown below:

1. 14-point, 16-point, 24-point

Input terminal:

S/S	X0	X2	X4	X6	X10	X12	X14
●	X1	X3	X5	X7	X11	X13	X15

Output terminal:

+24	Y0	Y1	Y2	Y3	Y4	Y6	Y10
COM	COM0	●		COM1	COM2	Y5	Y7	Y11

2. 30-point

Input terminal:

COM	S/S	X0	X2	X4	X6	X10	X12	X14	X16
+24	●	X1	X3	X5	X7	X11	X13	X15	X17

Output terminal:

| Y0 | Y1 | Y2 | Y3 | Y4 | Y6 | ● | Y10 | Y12 | Y14 |
| COM0 | ● | COM1 | COM2 | Y5 | Y7 | COM3 | Y11 | Y13 | Y15 |

3. 40-point

Input terminal:

| S/S | X0 | X2 | X4 | X6 | X10 | X12 | X14 | X16 | X20 | X22 | X24 | X26 |
| ● | X1 | X3 | X5 | X7 | X11 | X13 | X15 | X17 | X21 | X23 | X25 | X27 |

Output terminal:

| +24 | Y0 | Y1 | Y2 | Y3 | Y4 | Y6 | ● | Y10 | Y12 | Y14 | Y16 | ● |
| COM | COM0 | ● | COM1 | COM2 | Y5 | Y7 | COM3 | Y11 | Y13 | Y15 | Y17 | ● |

4. 60-point

Input terminal:

| COM | S/S | X0 | X2 | X4 | X6 | X10 | X12 | X14 | X16 |
| +24 | ● | X1 | X3 | X5 | X7 | X11 | X13 | X15 | X17 |

| X20 | X22 | X24 | X26 | X30 | X32 | X34 | X36 | X40 | X42 |
| X21 | X23 | X25 | X27 | X31 | X33 | X35 | X37 | X41 | X43 |

Output terminal:

| Y0 | Y1 | Y2 | Y3 | Y4 | Y6 | ● | Y10 | Y12 |
| COM0 | ● | COM1 | COM2 | Y5 | Y7 | COM3 | Y11 | Y13 |

| Y14 | Y16 | ● | Y20 | Y22 | Y24 | Y26 |
| Y15 | Y17 | COM4 | Y21 | Y23 | Y25 | Y27 |

5. 48-point

Input terminal:

COM	S/S	X0	X2	X4	X6	X10	X12	X14	X16
+24	●	X1	X3	X5	X7	X11	X13	X15	X17

X20	X22	X24	X26						
X21	X23	X25	X27						

Output terminal:

Y0	Y1	Y2	Y3	Y4	Y6	●	Y10	Y12
COM0	●	COM1	COM2	Y5	Y7	COM3	Y11	Y13

Y14	Y16	●	Y20	Y22	Y24	Y26
Y15	Y17	COM4	Y21	Y23	Y25	Y27
Power Supply

The specification of PLC built-in power and power for extension modules is listed in the following table.

Item		Unit	Min.	Rated	Max.	Note
Power supply voltage		Vac	85	220	264	Normal startup and operation
Input current		A	/	/	2.	Input: 90Vac, 100% output
Output current	5V/GND	mA	/	600	/	The total power of outputs 5V/GND and 24V/GND <
	24V/GND	mA	/	250	/	
	24V/COM	mA	/	250	/	10.4W. Max. output power: 15W (sum of all branches)

Digital Inputs & Outputs

3.1 Input Characteristic And Specification
The input characteristic and specs are shown as follows:

Item	High-speed input terminals X0—X7	General input terminal
Input mode	Source mode or sink mode, set through s/s terminal	
Electric parameters	Input voltage	24Vdc	
	Input impedance	4k Ω	4k Ω
	Input ON	External circuit resistance < 400 Ω	
	Input OFF	External circuit resistance > 24k Ω	
Filtering function	Digital filter	X0—X7 have digital filtering function. Filtering time: 0, 8, 16, 32 or 64ms (selected through user programme)	
	Hardware filter	Input terminals other than X0—X7 are of hardware filtering. Filtering time: about 10ms	
High-speed function		X0— X7: high-speed counting, interrupt, and pulse catching X0— X5: up to 10kHz counting frequency The sum of input frequency should be less than 60kHz	
Common terminal		Only one common terminal: COM	

The input terminal act as a counter has a limit over the maximum frequency. Any frequency higher than that may result in incorrect counting or abnormal system operation. Make sure that the input terminal arrangement is reasonable and external sensors used are proper.

Input connection example

The following diagram shows an example of IVC1S-1614MAR, which realizes simple positioning control. The positioning signals from the PG are input through high speed counting terminals XO and Xt, the limit switch signals that require high-speed response can be input through high-speed terminals X2—X7. Other user signals can be input through any other input terminals.

3.2 Output Characteristic And Specification

The following table shows the relay output and transistor output.

Item	Relay output	Transistor output
Output mode	When output state is ON, the circuit is closed; OFF, open	
Common terminal	Divided into multiple groups, each with a common terminal COMn, suitable for control circuits with different potentials. All common terminals are isolated from each other	
Voltage	220Vac; 24Vdc, no polarity requirement	24Vdc, correct polarity required
Current	Accord with output electric specs (see following Table)	
Difference	High driving voltage, large current	Small driving current, high frequency, long lifespan
Application	Loads with low action frequency such as intermediate relay, contactor coil, and LEDs	Loads with high frequency and long life, such as control servo amplifier and electromagnet that action frequently

The electric specs of outputs is shown in the following table.

Item		Relay output terminal	Transistor output terminal
Switched voltage		Below 250Vac, 30Vdc	5-24Vdc
Circuit isolation		By Relay	Photo Coupler
Operation indication		Relay output contacts closed, LED on	LED is on when optical coupler is driven
Leakage current of open circuit		/	Less than 0.1mA/30Vdc
Minimum load		2mA/5Vdc	5mA (5-24Vdc)
Max. output current	Resistive load	2A/1 point; 84/4 points, using a COM 84/8 points, using a COM	YO/Y1: 0.3A/1 point. Others: 0.3A/1 point, 0.8A/4 point, 1.24/6 point, 1.64/8 point. Above 8 points, total current increases 0.1A at each point increase
	Inductive load	220Vac, 80VA	YO/Y1: 7.2W/24Vdc Others: 12W/24Vdc
	Illumination load	220Vac, 100W	YO/Y1: 0.9W/24Vdc Others: 1.5W/24Vdc
Response time	OFF → ON	20ms Max	YO/Y1: 10us Others: 0.5ms
	ON → OFF	20ms Max	
Y0, Y1 max. output frequency		/	Each channel: 100kHz
Output common terminal		YO/ Y1-COMO; Y2/Y3-COM1. After Y4, Max 8 terminals use one isolated common terminal	
Fuse protection		No	

Output connection example
The following diagram shows an example of IVC1S-1614MAR. Different output groups can be connected to different signal circuits with different voltages. Some (like YO-COMO) are connected to the 24Vdc circuit powered

by local 24V-COM, some (like Y2-COM1) are connected to the 5Vdc low voltage signal circuit, and others (like Y4 —Y7) are connected to the 220Vac voltage signal circuit.

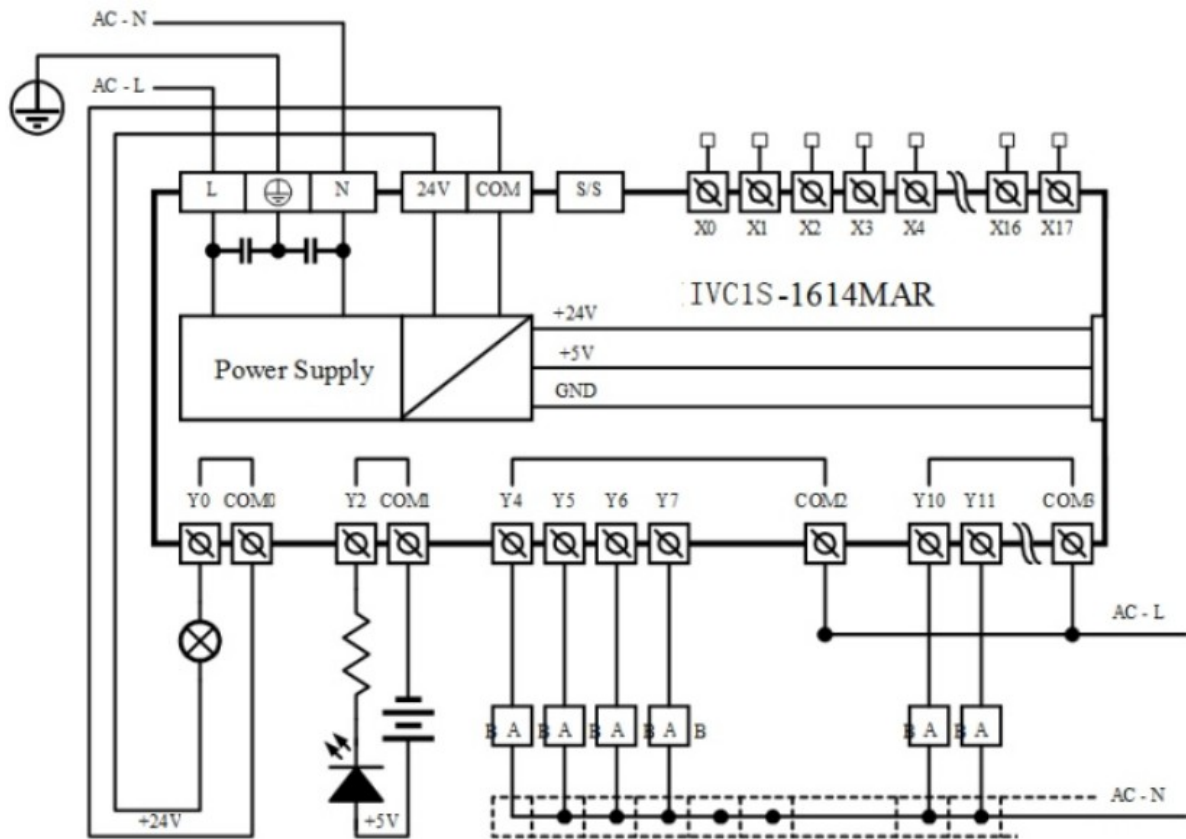

Various low voltage control circuits   220Vac control load circuits

Communication Port

IVC1S series PLC basic module has three serial asynchronous communication ports: PORTO and PORT1. Supported baud rates:

115200 bps	57600 bps	38400 bps	19200 bps
9600 bps	4800 bps	2400 bps	1200 bps

The mode selection switch determines the communication protocol.

Pin No.	Name	Description
3	GND	Ground
4	RXD	Serial data receiving pin (from RS232 to PLC)
5	TXD	Serial data transmitting pin (from PLC to RS232)
1, 2, 6, 7, 8	Reserved	Undefined pin, leave it suspended

As a terminal dedicated to user programming, PORTO can be converted to programming protocol through the mode selection switch. The relationship between PLC operation status and the protocol used by PORTO is shown in the following table.

Mode selection switch position	status	PORTO operation protocol
ON	Running	Programming protocol, or Modbus protocol, or free-port protocol, or N: N network protocol, as determined by user program and system configuration
OFF	Stop	Converted to programming protocol

PORT1 is ideal for connection with equipment that can communicate (such as inverters). With Modbus protocol or RS485 terminal free protocol, it can control multiple devices through the network. Its terminals are fixed with screws. You can use a shielded twisted-pair as the signal cable to connect communication ports by yourself.

Installation

PLC is applicable to Installation category II, Pollution degree 2.
5.1 Installation Dimensions

| Model	Length	Width	Height	Weight
IVC1 S-0806MAR, IVC1 S-0806MAT	135mm	90mm	71.2mm	440g
IVC1S-1006MAR, IVC1S-1006MAT				440g
IVC1S-1208MAR, IVC1S-1208MAT				455g
IVC1S-1410MAR, IVC1S-1410MAT				470g
IVC1S-1614MAR, IVC1S-1614MAT	150mm	90mm	71.2mm	650g
IVC1S-2416MAR, IVC1S-2416MAT	182mm	90mm	71.2mm	750g
IVC1S-3624MAR, IVC1S-3624MAT	224.5mm	90mm	71.2mm	950g
IVC1S-2424MAR, IVC1S-2424MAT	224.5mm	90mm	71.2mm	950g

5.2 Installation Method

DIN rail mounting

Generally you can mount the PLC onto a 35mm-wide rail (DIN), as shown in the following figure.
Screw fixing

Fixing the PLC with screws can stand greater shock than DIN rail mounting. Use M3 screws through the mounting holes on PLC enclosure to fix the PLC onto the backboard of the electric cabinet, as shown in the following figure.

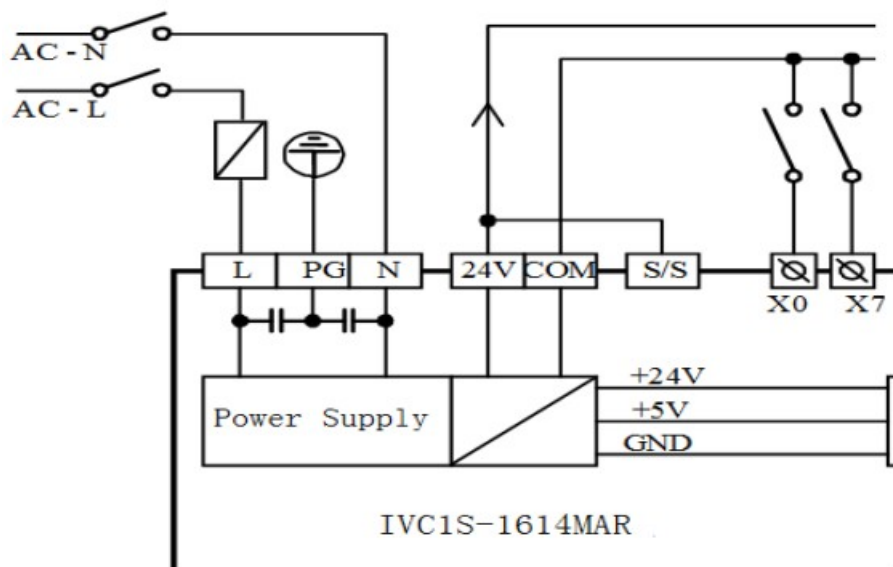

5.3. Cable Connection And Specification

Connecting power cable and grounding cable

The connection of AC power and auxiliary power is demonstrated in the following figure.

We suggest you wire a protection circuit at the power supply input terminal. See the figure below.

Connect the PLC ⏚ terminal to the grounding electrode. To ensure reliable grounding cable connection, which

makes the equipment safer and protects it from EMI. use AWG12 – 16 cable, and make the cable as short as possible. Use independent grounding. Avoid sharing route with the grounding cable of other equipment (particularly those with strong EMI). See the following figure.

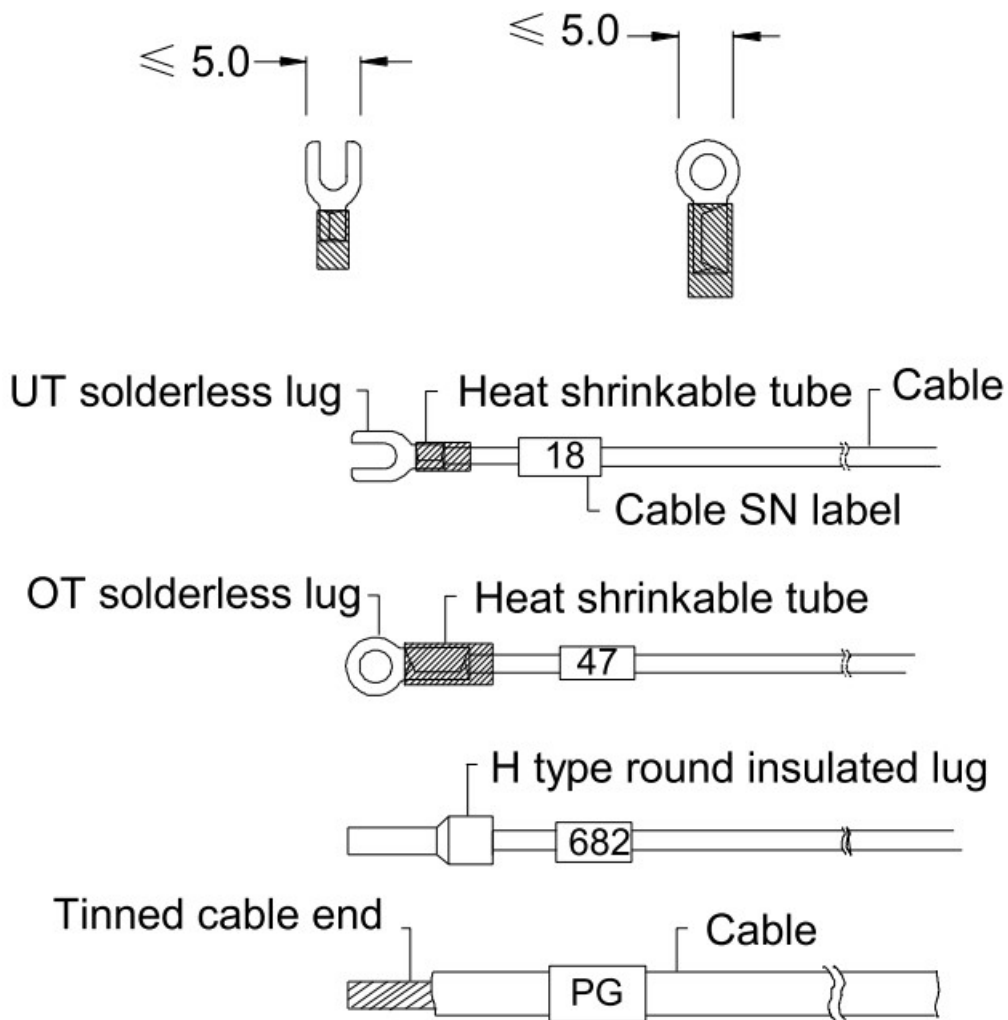

Cable specification

When wiring a PLC, use multi-strand copper wire and ready-made insulated terminals to ensure the quality. The recommended model and the cross-sectional area of the cable are shown in the following table.

Wire	Cross-sectional area	Recommended model	Cable lug and heat-shrink tube
AC power cable (L, N)	1.0-2.0mm²	AWG12, 18	H1.5/14 round insulated lug, or tinned cable lug
Earth cable (⏚)	2.0mm2	AWG12	H2.0/14 round insulated lug, or tinned cable end
Input signal cable (X)	0.8-1.0mm²	AWG18, 20	UT1-3 or OT1-3 solderless lug Φ3 or Φ4 heat shrinkable tube
Output signal cable (Y)	0.8-1.0mm²	AWG18, 20	

Fix the prepared cable head onto the PLC terminals with screws. Fastening torque: 0.5-0.8Nm.
The recommended cable processing-method is shown in the following figure.

UT solderless lug — Heat shrinkable tube — Cable

18

Cable SN label

OT solderless lug — Heat shrinkable tube

PG

Power-on Operation And Maintenance

6.1 Startup
Check the cable connection carefully. Make sure that the PLC is clear of alien objects and the heat dissipation channel is clear.

1. Power on the PLC, the PLC POWER indicator should be on.
2. Start the Auto Station software on the host and download the compiled user program to the PLC.
3. After checking the download program, switch the mode selection switch to the ON position, the RUN indicator should be on. If the ERR indicator is on, the user program or the system is faulty. Loop up in the [V2/IVC1S series PLC Programming Manual and remove the fault.
4. Power on the PLC external system to start system debugging.

6.2 Routine Maintenance
Do the following:

1. Ensure the PLC a clean environment. Protect it from aliens and dust.
2. Keep the ventilation and heat dissipation of PLC in good condition.
3. Ensure that the cable connections are reliable and in good condition.

 Warning

1. Never connect the transistor output to an AC circuit (like 220Vac). The design of the output circuit must abide by the requirements of electric parameters, and no over-voltage or over-current is allowed.

2. Use the relay contacts only when necessary, because the life span of relay contacts depends largely on its action times.

3. The relay contacts can support loads smaller than 2A. To support larger loads, use external contacts or mid-relay.

4. Note that the relay contact may fail to close when the current is smaller than 5mA.

Notice

1. The warranty range is confined to the PLC only.

2. Warranty period is 18 months, within which period INVT conducts free maintenance and repairing to the PLC that has any fault or damage under the normal operation conditions.

3. The start time of warranty period is the delivery date of the product, of which the product SN is the sole basis of judgment. PLC without a product SN shall be regarded as out of warranty.

4. Even within 18 months, maintenance will also be charged in the following situations:

   ■ Damages incurred to the PLC due to mis-operations, which are not in compliance with the User Manual;

   ■ Damages incurred to the PLC due to fire, flood, abnormal voltage, etc;

   ■ Damages incurred to the PLC due to the improper use of PLC functions.

5. The service fee will be charged according to the actual costs. If there is any contract, the contract prevails.

6. Please keep this paper and show this paper to the maintenance unit when the product needs to be repaired.

7. If you have any question, please contact the distributor or our company directly.
