Jabra Noise Guide Portable Noise Level Measuring Device

Noise Guide

What is the function of the Jabra Noise Guide USB key?

The Jabra Noise Guide USB key contains the Jabra Noise Guide software for your Windows computer.

After installing the software, you can use the USB key for the following purposes:

- Transferring log measurements from the internal log to the Jabra Noise Guide software using the USB key.
- Transferring your light configuration from the Jabra Noise Guide software to the Jabra Noise Guide unit using the USB key instead of connecting directly to your computer. This may be useful if you have multiple units spread around the office, or if you change the configuration of the Jabra Noise Guide.
- Storing measurement data directly on the USB key. All measurement data is then logged on the USB key as well as in the internal log. This may be useful if you want a more detailed view of the data than 'LAeq 1 minute'. If you store data with the USB key connected directly in the Jabra Noise Guide, you obtain very detailed data with eight measuring points every second. You can view the log measurements as LAeq measurements in the Jabra Noise Guide software afterwards. The software is available for Windows on the Jabra Noise Guide product support page.
- If needed, you can update the firmware in the Jabra Noise Guide using the USB key. Some company firewalls may prevent the software from downloading a firmware update to the USB key. Contact your company's IT

support for guidance about firmware files and installation.

Note:

Depending on your operating system, you may need to format the USB key so you can transfer to or extract data from it.

What is the Function of the Jabra Noise Guide USB Key?	3
This noise level meter USB key contains a portable software solution for your Windows computer. After installing the software, you can use the USB key for the following purposes:	3
• Conducting long measurements from the field using the Jabra Noise Guide software using the USB key.	3
• Conducting short measurements from the field using the Jabra Noise Guide software by the data base loaded and saving the collected data instead of saving it directly to your computer. This can be useful if you have no access to a computer or need to save the data for a long time.	3
• Using the measurement data directly on the USB key. All measurements data is being suggested to be stored on a card in the memory of the USB key for up to a year and a more detailed view of the data (up to 1 month). Also, the software on the USB key can be used for data analysis, generating reports, and saving data to a file. The software on the USB key can be used for data analysis, generating reports, and saving data to a file. The software on the USB key can be used for data analysis, generating reports, and saving data to a file.	3
• Providing an easy solution for Windows on the Jabra Noise Guide USB key. The USB key can be used for data analysis, generating reports, and saving data to a file. The software on the USB key can be used for data analysis, generating reports, and saving data to a file. The software on the USB key can be used for data analysis, generating reports, and saving data to a file.	3
