### Kasp SECURITY K62004D Code Locked Bolt

### Product Information

The product is the K620 04D lock. It is a combination lock that allows users to set their combination for securing their belongings.

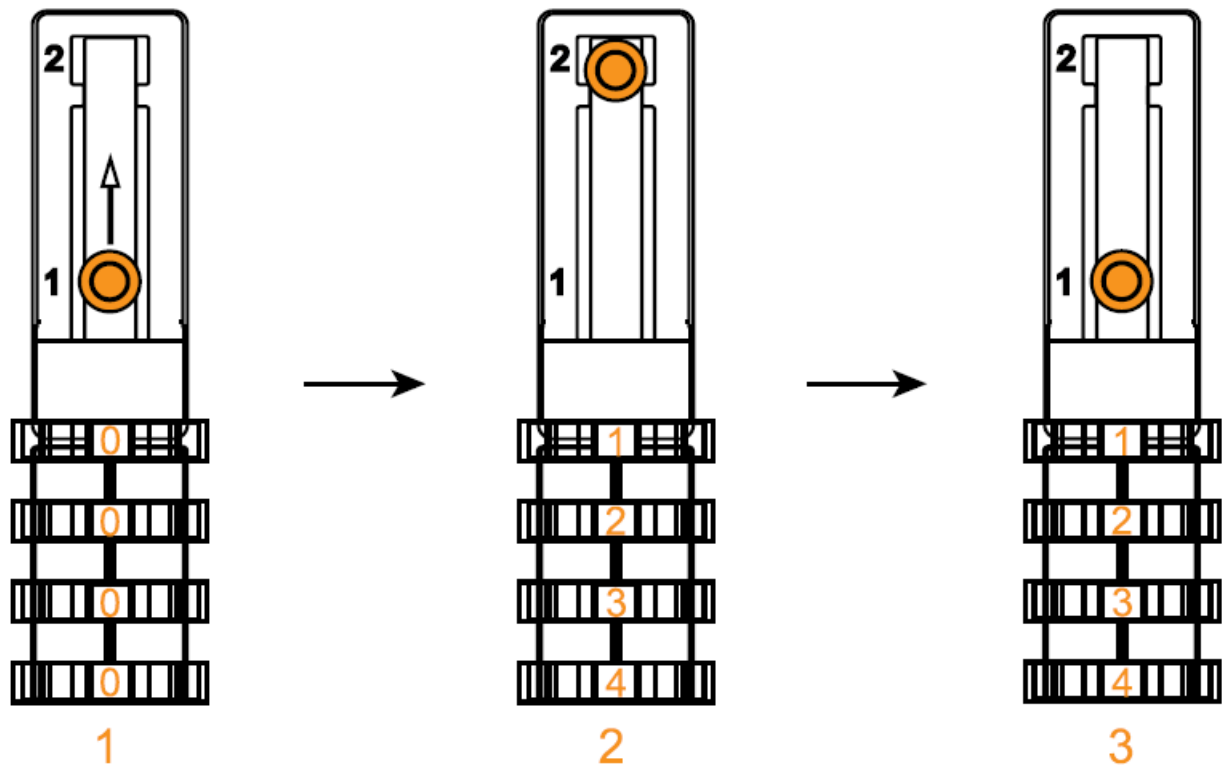

### Product Usage Instructions

1. Lift the slider knob and push it to the second stop position, then push it down.
2. Change the current combination to your desired one.
3. Lift the slider knob again and return the slider to its original position.

By following these steps, you will be able to reset the lock to your combination.

## Combination Locking Bolt Resetting Instructions

To reset the lock to your own combination:

1. Lift the slider knob and push to the second stop position, push down.
2. Change the combination.
3. Lift the slider knob and return the slider to the original position
