Stabilizers

It's important to install the stabilizers first.

All keyboard kits come with a set of prelubricated stabilizers as standard since 2023 to avoid carrying liquid lubrication.
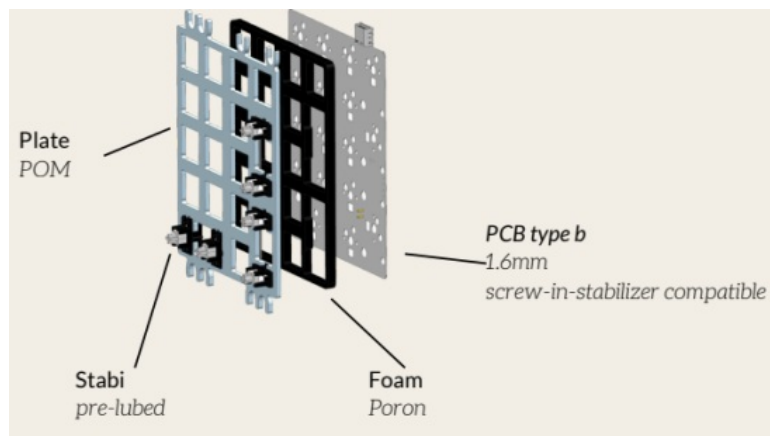

Additional lubrication is always a nice touch but not required.

Steps for stabile assembly:

1. align the wire towards the notch.
2. push the wire underneath the plate.
3. push the back end down.
4. make sure the snaps are engaged.

Core

Plate
POM

PCB type b
1.6mm
screw-in-stabilizer compatible

Stabi
pre-lubed
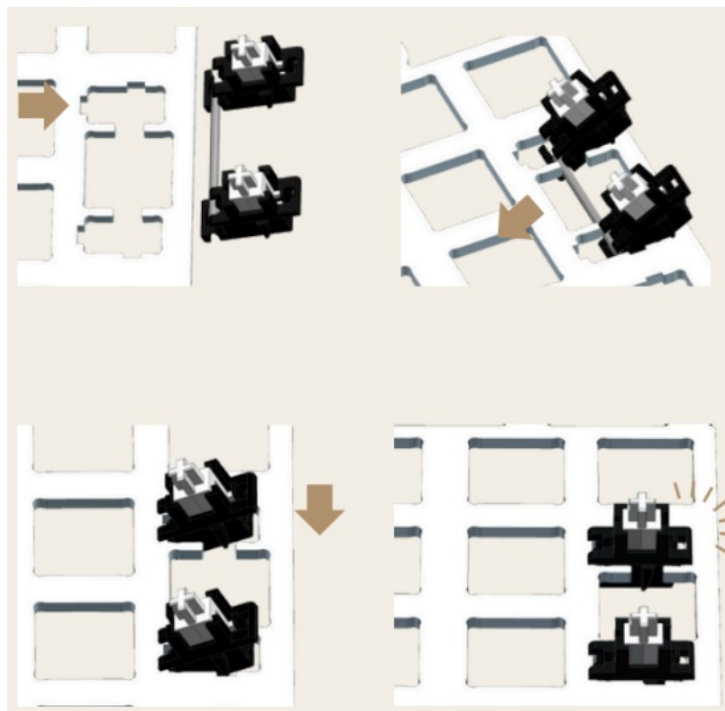

Foam
Poron

Remove the padding blocks from the Poron foam, and then assemble the both cores by aligning the plate, foam, and PCB.

Switches

Ensure the wires are straight down each time you push in the switch.

(Recommended) Plug in the cables after installing all switches, then test the functionality.
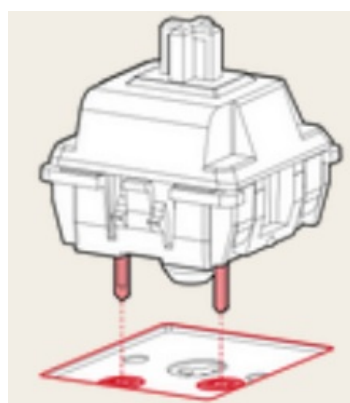

*The wires on the switch can sometimes get bent during transportation, which can be straightened by hand.

| Num Lock | / | * | - |
7 Home	8 ↑	9 PgUp	+
4 ←	5	6 →	
1 End	2 ↓	3 PgDn	Enter
0 Ins		. Del	
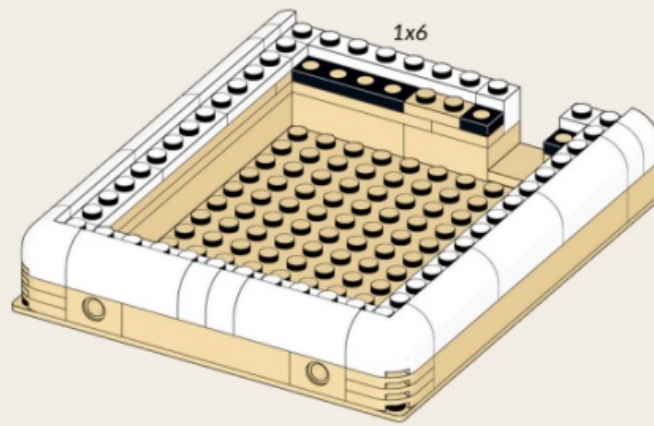

Put the rubber feet on and check the sit. Keep the pins for future build.
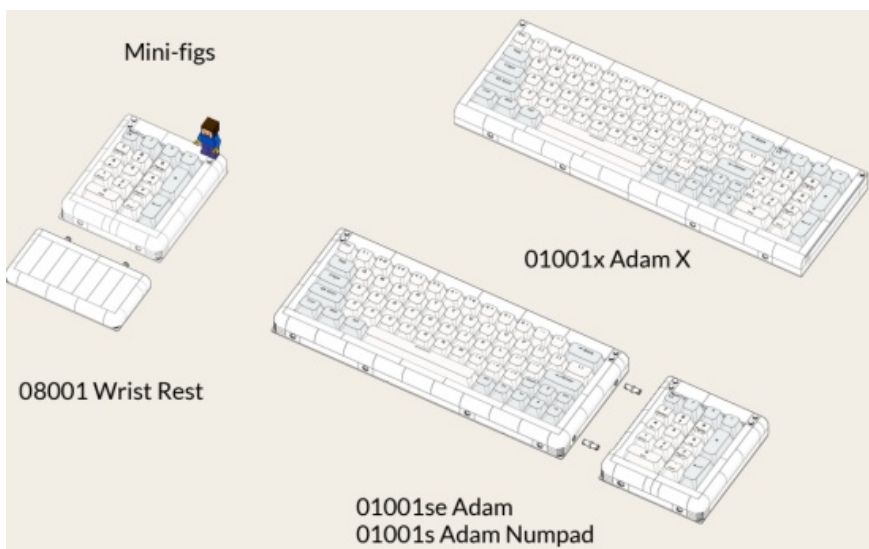

Reference Layout

- Open a browser. http://get.vial.today
- VIAL can run on the website or be installed on your PC.
- Adam Numpad will be recognized as Core17. The key map will be loaded when you click "connect".
- It reqires a firmware swap when dealing with multiple modules. You should flash the PCB17 with the "Core90" or "Lilith81 ISO" firmware, depending on the main module you connect.
- Matrix tester in VIAL is available for testing the key function.
- The key values and RGB lights can be configured.
- Press Fn to access the layer (1)
- Some short cut:
