Kinetec MCDP5200 RD1 Evaluation Kit

General Description

The MCDP5200 is an advanced USB Type-C / DisplayPort1.4a to HDMI converter with an integrated USB type-C de-multiplexer, targeted primarily for Mobile Notebook accessory and display applications. This device functions as a DP to HDMI protocol converter with a HDCP1.x/ HDCP2.x repeater function.

The MCDP5200 has a USB Type C DP Alt mode Upstream Facing Port (UFP), supporting Billboard functionality. The four high speed lanes of UFP can receive DP1.4a MST audio-video and USB3.1 Gen2 data streams simultaneously. The input lane mapping is flexible and meets the USB Type-C connector flip orientation requirements. The incoming DP and USB signals are de-multiplexed, retimed, and transmitted on the Downstream Facing Ports (DFP). The MCDP5200 consists of a USB DFP port with USB3.1 TX and RX pair and an audio-video DFP port configured as DC coupled HDMI/DVI port, each with four high-speed lanes.

Ordering Information

| Part Number | Description | IC Package |
|-------------|-----------------------------|-------------|
| RD1-5200 | MCDP5200 RD1 Evaluation Kit | LFBGA77-169 |

Detailed functionality of the IC is described in the MCDP5200 datasheet. Included in the kit are the following items:

| Item # | Description | Quantity |
|--------|----------------------------------------|----------|
| 1 | Fully assembled printed circuit board | 1 |
| 1 | Reference Design Evaluation kit manual | 1 |

Evaluation Board Features

Design Features

- **DUT:** MCDP5200
- **Board Name:** RD1-5200
- **Power Supply**
 - DC5V Input = Barrel Jack, USB Type-C (5V/3A mode) in alternative use, with over voltage protection (trip voltage 6.2~7.0V)

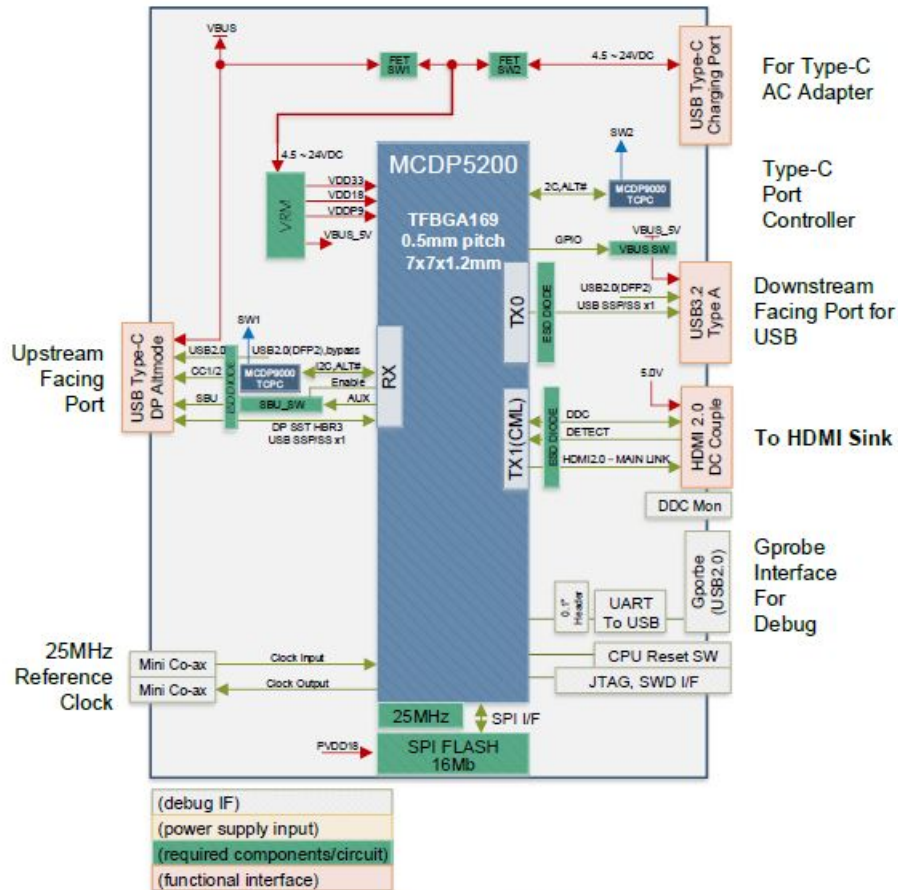

• Interfaces

- Input: USB Type-C Alt mode support
 - Display Port: 1.62 / 2.74 / 5.4 / 8.1 Gbps, 1 / 2 / 4 lane configuration
 - USB3.2 : 5Gbps, 10Gbps x1 operation
 - USB2: (bypassed to DFP)
- Output: HDMI2.0b with HDMI Type-A Connector as DFP
 - If UFP port is configured as 4L DP mode, then 600 MHz(max) TMDS character clock, 6Gbps(max) can be supported
 - If UFP port is configured as USB3 + 2L DP mode, then up to 540MHz TMDS character clock can be supported. 4k2k60Hz resolution can be achieved in either reduced blanking, YUV420 or with the DSC functionality
- Output: USB3.2 SSPx1 operation with USB Type-A Connector as DFP
 - 5Gbps/10Gbps
- CPU Reset: 1x Push switch
- Charging Port: USB type-C Receptacle
 - Handling voltage can be up to 20VDC as Power Delivery specification.
 - USB PD: Through UFP USB C and DFP USB C (up to 65W) Dual Role
 - Components
- MCDP9000 (USB PD3.0 Type-C Port Controller)
- Small crystal operation: 25MHz with 2016 size (metric)
- 16Mbit SPI Flash: MX25R1635FM2IH2 (default) or compatibles1.
- Protection Circuit2
 - ESD Diodes on
- RX: High Speed Line and AUX/HPD
- TX1(HDMI): High Speed Line and DDC
- TX0(USB3 SSP): High Speed Line
- Pin header of G-Probe Interface (debug use)
 - Over current protection
- 1.5A@VBUS: USB Type-A(DFP)
- 0.3A@Trip of poly-fuse (resettable fuse): HDMI +5V power supply
- 1.0A@Trip of poly-fuse: for external G-Probe card
 - External reference resistor: $5.36k\Omega \pm 1\%$ ohm
- VRM Block (Power Distribution Network)
 - Lower cost components and smaller space
 - DCDC converter circuit compliant with noise requirement (<20mVpp)
 - The self-contained over-current protection circuit
 - Discharging load capacitors
- Interfaces for debug:
 - 1x G-Probe Interface on USB Micro-B connector (UART signals can be bypassed to external GProbe card)
 - 1x JTAG(SWD) interface with J-Link 19pin
 - Trace pins of JTAGE interface are option
 - 1x HDMI DDC pins (DC coupled) on DFP

- 1x Reference clock output with u-coax connector (Hirose U.FL)
- 1x Reference clock input path with u-coax connector (Hirose U.FL)
- 1x 6pin connector for TEST mode and VPP(6V) Power Supply
- 1x Bootstrap pin header

System Overview

Functional Block Diagram

Connection Setup

1. Connect USB Type C cable
2. Connect HDMI Cable
3. [optional] Connect USB Type C Charging port: MCDP5200 RD1 USB PD (through UFP USB C and DFP USB C Dual Role)
4. [optional]: USB3.2 Type A: Downstream Facing Port for USB supports (USB2.0, USB3.x Gen1/Gen2).
5. USB Type A-to-C cable can also be used to connect to USB C 2.0 / 3.x Gen1/Gen2 devices.

Figure 2. Connection Setup

Diagnosis

If the image does not come up, follow the steps below for diagnosis.

Note: The diagnosis requires the Kinetics' GProbe software3.

1. Install the GProbe diagnostic tool on a computer and set the baud rate to 115,200.
2. Connect a micro-USB cable to the CN5 connector as shown in figure2-3 (the board has a USB-UART for Gprobe Interface)
3. Install the necessary driver FTDI drivers (USB to UART) and connect to the computer with the Gprobe software
4. Hit the Reset button on the board. You will see the firmware version and date of firmware in the GProbe window. This indicates the DP receiver IC is functional. If the message does not appear, contact Kinetic for further assistance.

Life Support Policy

LIFE SUPPORT: KINETIC TECHNOLOGIES' PRODUCTS ARE NOT DESIGNED, INTENDED, OR AUTHORIZED FOR USE AS COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS. NO WARRANTY, EXPRESS OR IMPLIED, IS MADE FOR THIS USE. AUTHORIZATION FOR SUCH USE SHALL NOT BE GIVEN BY KINETIC TECHNOLOGIES, AND THE PRODUCTS SHALL NOT BE USED IN SUCH DEVICES OR SYSTEMS, EXCEPT UPON THE WRITTEN APPROVAL OF THE PRESIDENT OF KINETIC TECHNOLOGIES FOLLOWING A DETERMINATION BY KINETIC TECHNOLOGIES THAT SUCH USE IS FEASIBLE. SUCH APPROVAL MAY BE WITHHELD FOR ANY OR NO REASON.

"Life support devices or systems" are devices or systems which (1) are intended for surgical implant into the human body, (2) support or sustain human life, or (3) monitor critical bodily functions including, but not limited to, cardiac, respirator, and neurological functions, and whose failure to perform can be reasonably expected to result in a significant bodily injury to the user. A "critical component" is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

SUBSTANCE COMPLIANCE

Kinetic Technologies IC products are compliant with RoHS, formally known as Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment. However, this evaluation kit does not fall within the scope of the EU directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the requirements of these or related directives. To the best of our knowledge the information is true and correct as of the date of the original publication of the information. Kinetic Technologies bears no responsibility to update such a statement.
