MTX3-16-M ID Numbers

When a card module is inserted into MTX3-16-M, it is allocated 2 ID numbers which are used to identify the card's input/output ports. In total there are 16 ID numbers available, 2 for each inserted card. The ID numbers available for each slot are written on the chassis, next to the insertion points.

Ports on the left side of an inserted card module receive one ID number and ports on the right side of the card module receive the next consecutive ID number. Input/output directions are defined per ID number.

Card modules can have up to 4 input/output ports. If one side of a card module has more than 2 ports, those ports have the same ID and input/output direction.

Step 3: Install the MTX3-16-M

To rack mount the machine, attach both rack ears (by removing the screws from each side of the machine and replacing those screws through the rack ears) or place the machine on a table.

• Ensure that the environment (e.g., maximum ambient temperature & air flow) is compatible for the device.

- · Avoid uneven mechanical loading.
- Make appropriate consideration of equipment nameplate ratings to avoid overloading the circuits.
- Maintain reliable earthing of rack-mounted equipment.

Step 4: Connect The Inputs And Outputs

Insert the input and output cards into the card slots and then connect the inputs and the outputs.

You can insert cards into slots while the device is powered.

For optimum range and performance use the recommended Kramer cables available at www.kramerav.com/product/MTX3-16-M.
Using third-party cables may cause damage!

Step 5: Connect the power

Connect the power cord to MTX3-16-M and plug it into the mains electricity. Safety Instructions (See www.kramerav.com for updated safety information)

Caution:

- For products with relay terminals and GPI\O ports, please refer to the permitted rating for an external connection, located next to the terminal or in the User Manual.
- There are no operator serviceable parts inside the unit.

Warning:

- Use only the power cord that is supplied with the unit.
- Disconnect the power and unplug the unit from the wall before installing.
- Do not open the unit. High voltages can cause electrical shock! Servicing by qualified personnel only.
- To ensure continuous risk protection, replace fuses only according to the rating specified on the product label which located on the bottom of the unit.

Step 6: Set Operation Parameters

To operate MTX3-16-M from the front panel, use the numeric keypad.

When the unit is powered-on, the last matrix setup that was used is loaded.

To retrieve another setup, use recall setup (4 presses of the Menu button) to load a stored configuration from a preset or press Default Setup to reset the matrix to the default setup or factory default setup.

VOSW lists video output port IDs and VISW shows the video input port ID connected to the ID above it.

While powering up, the LCD display shows the following screens in sequence:

KRAMER ELECTRONICS Co., LTD Loading ...

KRAMER ELECTRONICS Co., LTD MTX3-16-M MATRIX

VOSW: 03 04 05 06 07 08 11 12

VISW: 01 02 09 10 13 14 15 16

Step 7: Operate the MTX3-16-M

Operate MTX3-16-M via:

- · Front panel buttons.
- Embedded web pages over the Ethernet.

The first time you enter, you will be asked to set a new password.

- Remotely, using RS-232 serial commands transmitted from a touch screen system, PC or a serial controller.
- Protocol 3000 commands transmitted over the Ethernet.
- Protocol 3000 commands transmitted through the mini-USB Service port.

| RS-232 Control / Protocol 3000 | | | | | | | | |

Using the embedded web pages

Click the navigation pane to open the following pages:

• Routing Settings – Change the video or audio input/output routing.

- Account Management Create new users with two levels of authorization.
- EDID Management Copy EDIDs from outputs to inputs.
- Settings Change device, card and port configuration, including IP, firmware and factory reset.
- Status Monitor operation status of cards, power supplies, PoE and fans.
- About View current webpage version and manufacturer information
