Kreg Multi-Mark KMA2900 Multi Purpose Marking and Measuring Tool User Manual

User Manual Guide d'utilisation • Manual del usuario

Congratulations on your purchase of a Kreg Multi-Mark™ multi-purpose layout tool. For more ideas on how to use this product, please see the video on www.kregtool.com.

To change the position of the Multi-Mark's scale to one of the three positions shown below, simply loosen the brass thumb screw, reposition the scale as needed, and retighten the thumb screw.

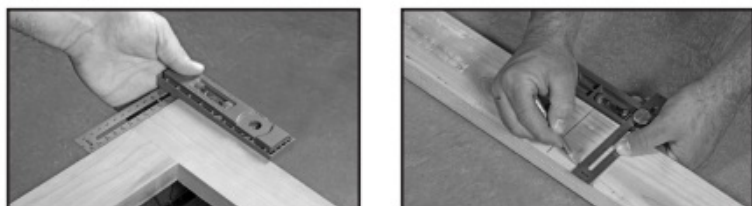

Position

The Multi-Mark™'s first position sets the scale at a 45° angle. This is good for marking up mitered joints such as picture frames and door trim

Position #2

The Multi-Mark™'s second position sets the scale at a 90° angle. This is good for squaring your projects and making marks at a 90° angle

Position #3

The Multi-Mark™'s third position sets the scale at a 0° angle, in line with the base.

This is good for use as a depth gauge on your table saw as well as a general scribing tool or simply transferring measurements.
