Synopsis

This document is specifically-written manual for SMART KEY CONTROLLER which is receiver and transmitter of wireless communication, which is to confirm user identifications under engine-start limiting function in heavy equipments.

SMART KEY CONTROLLER is defined as followings; SMART KEY CONTROLLER transmits a signal pattern by RFID 133 KHz in order to wake up SMK FOB. And then SMART KEY CONTROLLER communicates with SMK FOB by 433.92MHz wireless signal. SMART KEY CONTROLLER decodes password-secured signals and transfer identification information to certification device which has a function of engine-start limiting, such as Cluster, MCU or ECU, with using CAN protocol
