### Guidelines for ECU online coding

Model: Audi A5 2014

You can see the "P161200 Engine Control Module (ECM)-Error Code" fault code in the Audi V28.67 (latest version) health report

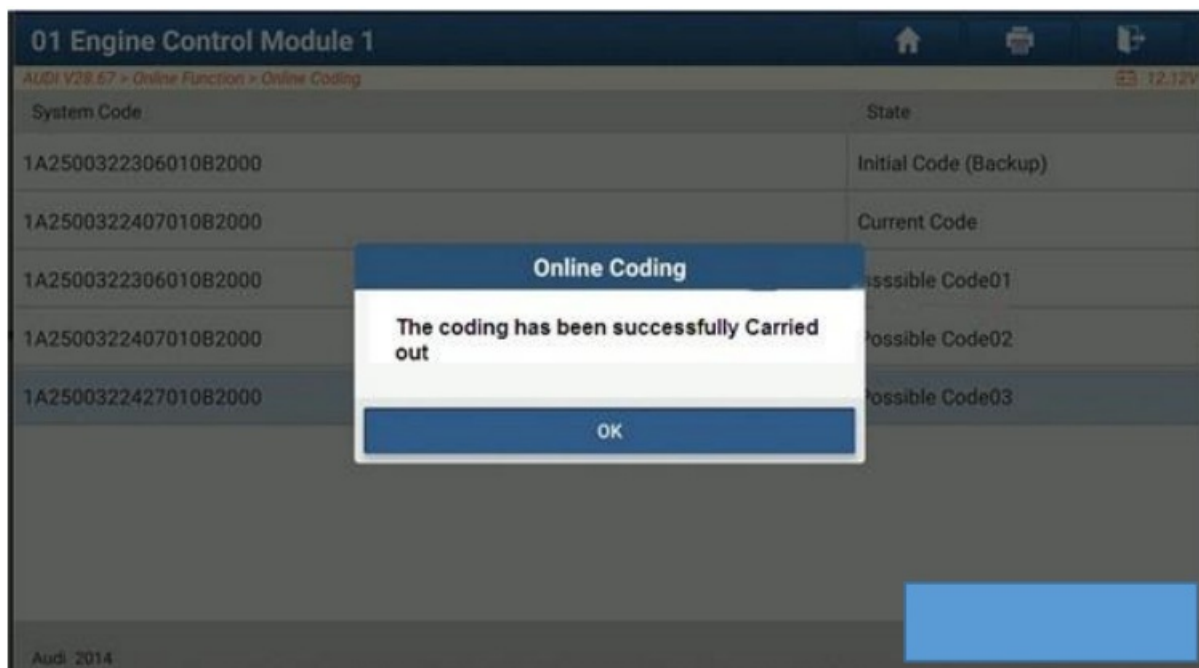

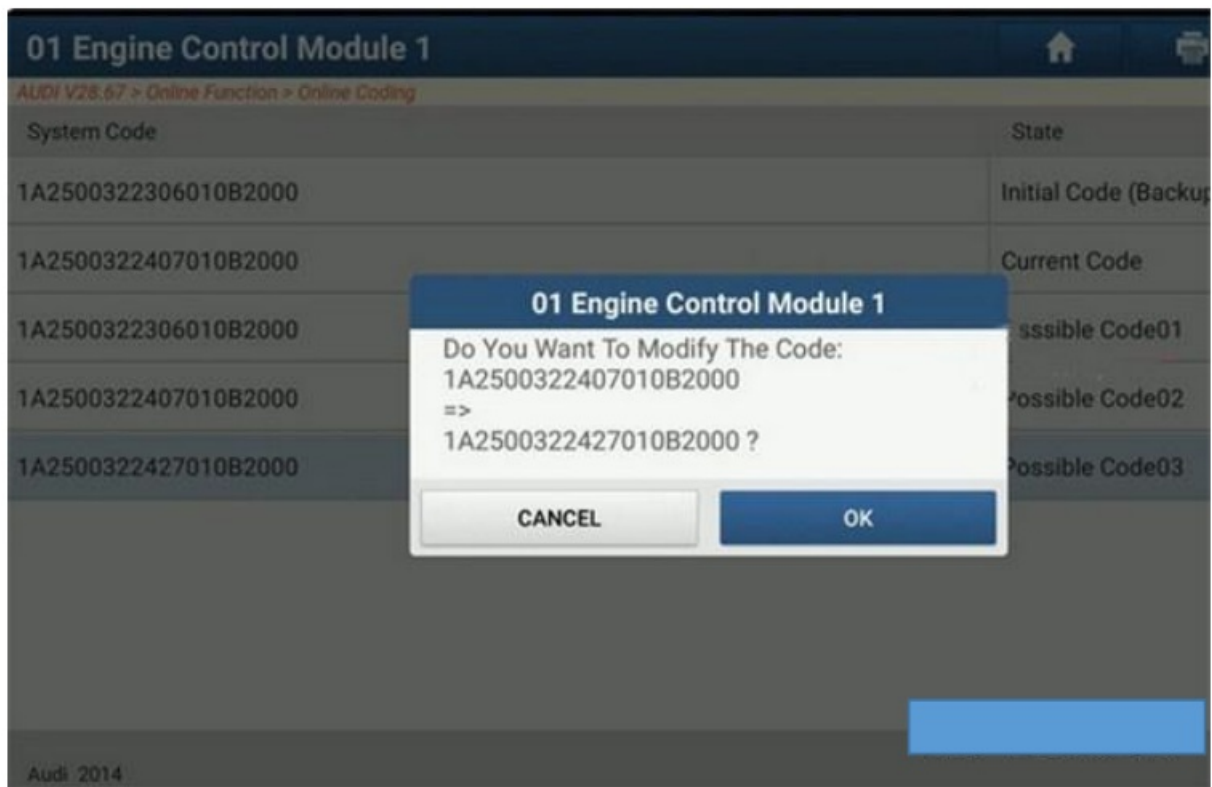

Read the ECU memory, you can find a long code “00000000000000000000”.

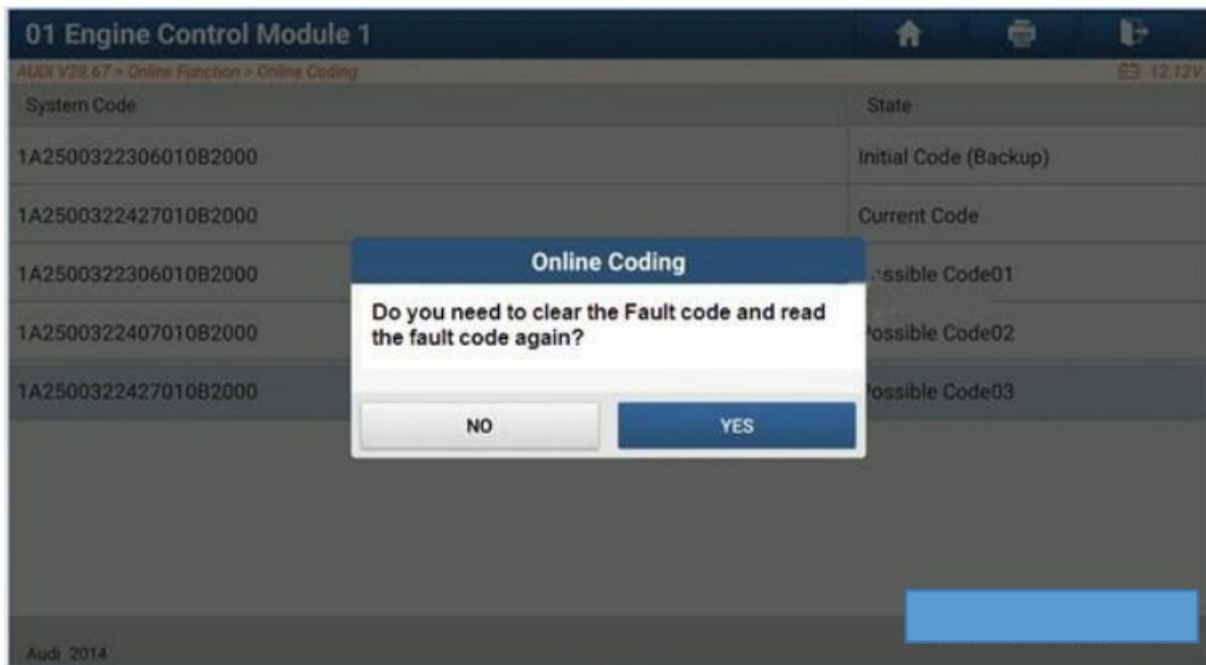

Select Audi V28.67>> Menu>> Online Function>> Online Coding Start downloading the file.

After that, select Single System Mode>> 01 Engine Control Module 1>> 1A2500322427010B2000(Possible Code03)

Make sure the code is the code to be modified

Confirm to clear the fault code and read the fault code again

Exit online programming

Back to the health report, there is no fault code now.

The fault memory is cleared successfully, and all systems are in normal state.
