Quad T-Junction Connects LDSBus Devices Sensors

Product Information

The LDSBus Quad T-Junction is a device that connects LDSBus Devices (Sensors/Actuators) to the LDSBus. It allows for the connection of up to four LDSBus Devices, and additional Quad T-Junctions can be daisy-chained to add more devices to the LDS Bus.

Setup Instructions

1. Connect the first LDSBus Quad T-Junction to any of the LDSBus Host Systems using an RJ45 (CAT5e) cable.
2. Connect the configured LDSBus Device(s) to the LDSBus Quad T-Junction as shown in the picture.
3. If there is more than one LDSBus Quad T-Junction in the system, chain them together as shown in the picture.

Note:

Enable termination for the last LDSBus Device in the bus.

Please scan QR code A or visit <https://brtsys.com/warranty> for warranty registration using the UUID and Product Key. Alternatively, you can scan QR code B.

Setup Instructions

The LDSBus Quad T-Junction connects LDSBus Devices (Sensors/Actuators) to the LDSBus. Each junction can connect up to four LDSBus Devices and additional LDSBus Quad T-Junctions may be daisy chained to add more LDSBus Devices to the LDS Bus.

• Step 1:

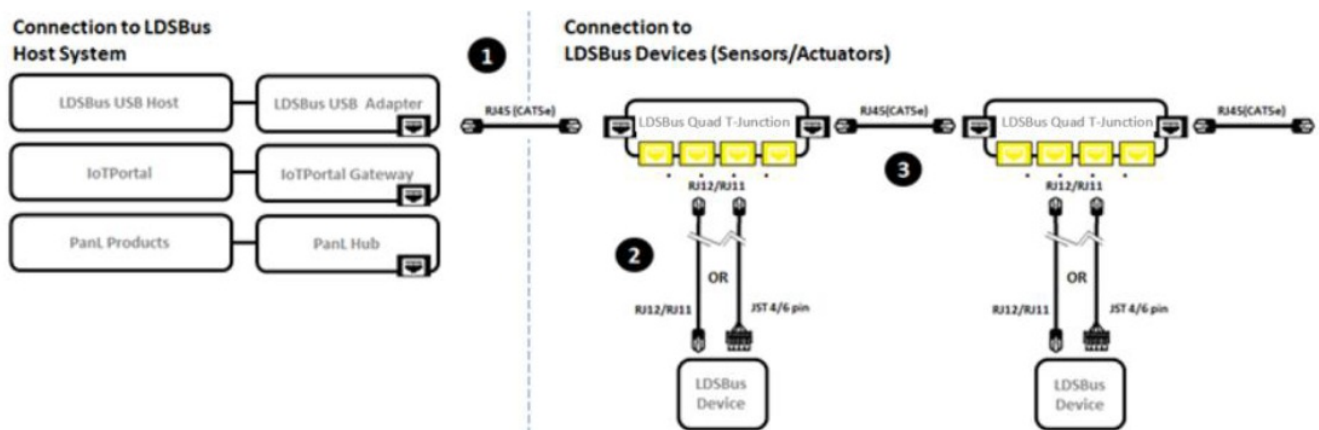

Connect the first LDSBus Quad T-Junction to any of the LDSBus Host Systems using an RJ45 (CAT5e) cable.

• Step 2:

Connect the configured LDSBus Device(s) to the LDSBus Quad T-Junction as shown in the picture.

• Step 3:

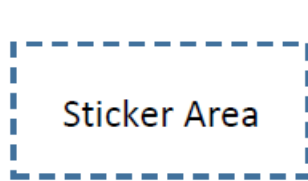

If there is more than one LDSBus Quad T-Junction in the system, chain them together as shown in the picture.

Note: Enable termination for last LDSBus Device in the bus

Warranty

Please scan QR code A or visit <https://brtsys.com/warranty> for warranty registration using the UUID and Product Key.
