Mirrors Pair Handlebar Mirrors

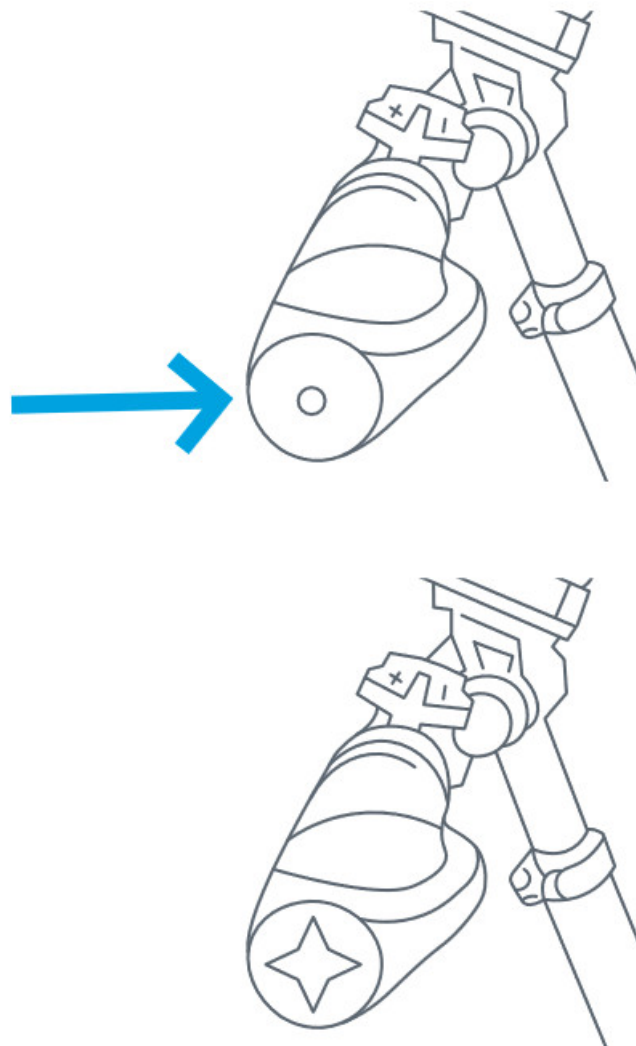

HANDLEBAR MIRRORS QUICK START

How to correctly install your handlebar mirrors

ABOUT

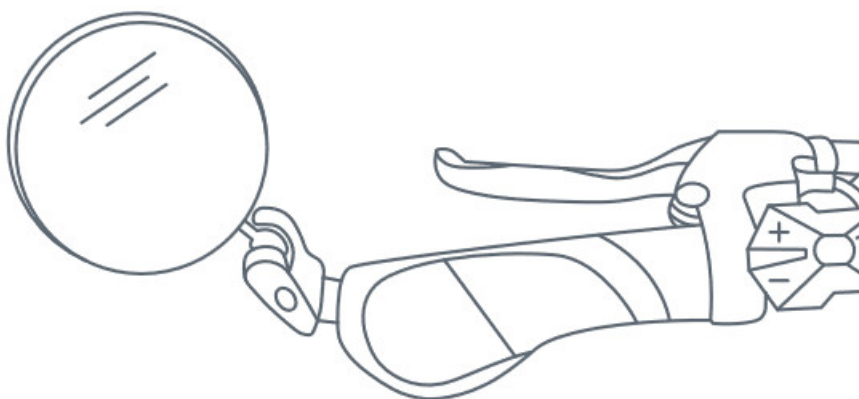

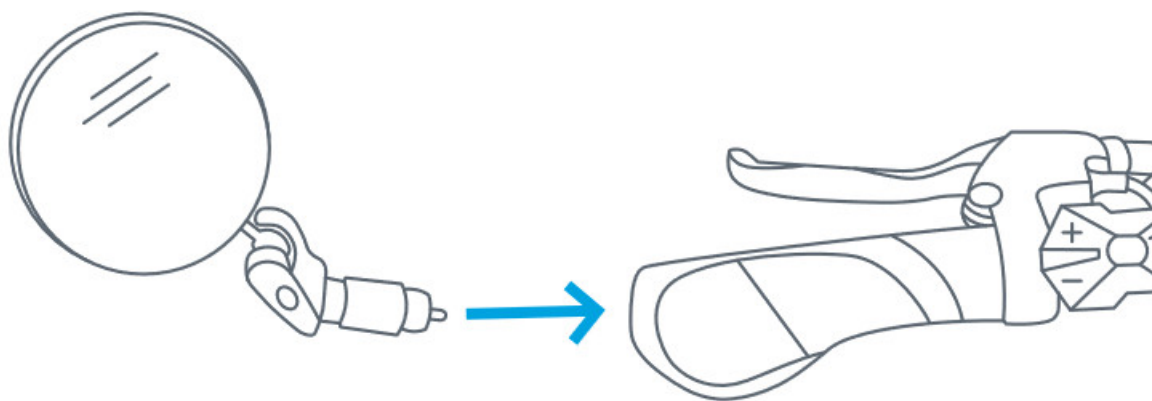

Each mirror fits handlebars with an inner diameter of 18 to 22mm.

STEP 1

To begin, you will need to create a larger opening at the end of the rubber handlebar grip. (Behind your handlebar grip, your handlebars are hollow, this is where the collar of the mirror will fit into). Use a knife to create a larger opening for the mirror collar.

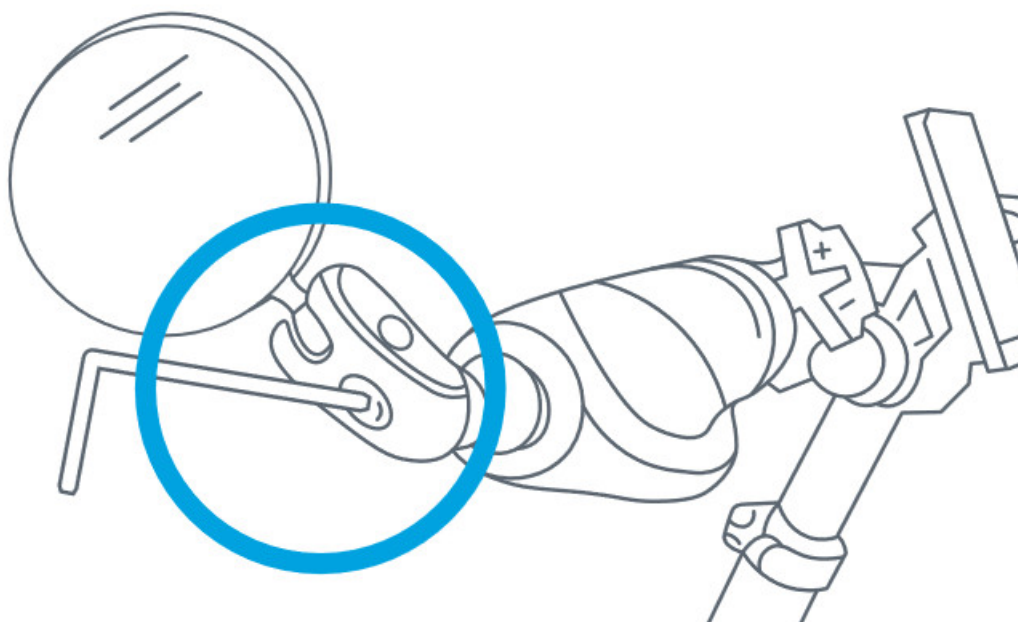

STEP 2

Next, you will insert the mirror collar into this opening.

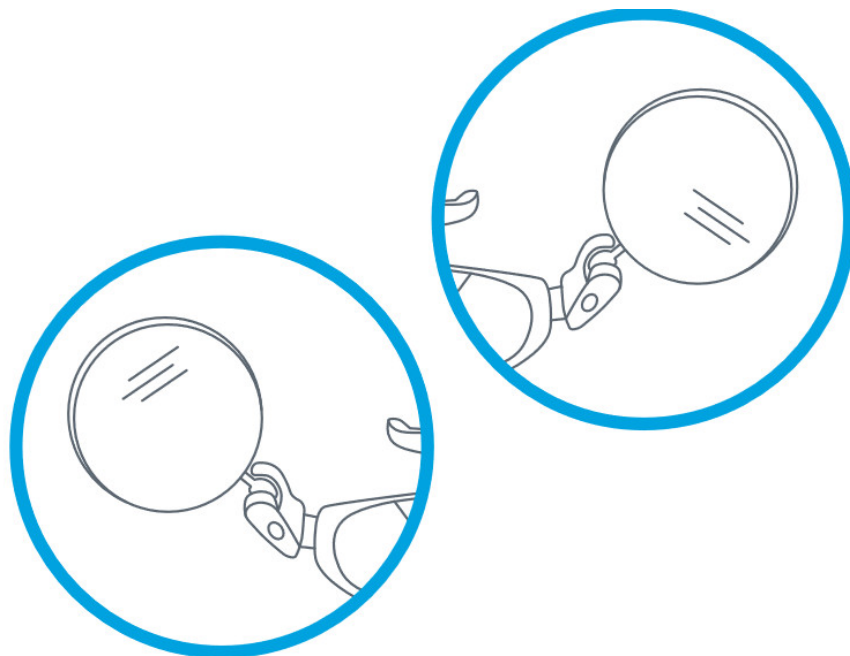

STEP 3

Using your 5mm hex wrench, tighten the screw to expand the collar grip. This secures the mirror within the handlebars.

STEP 4

Once your mirrors are secure, adjust each mirror to the best position for YOU!
