**Lemorele TC22L 5 in 1 USB C Hub HDMI Multiport Adapter**

## Product Information

The product is a USB C hub that provides various interfaces for connecting devices to a laptop or mobile device. It includes an HDMI interface for connecting to a monitor or TV, a USB C PD interface for charging, and a USB A interface for data transmission and power supply.

### Troubleshooting for HDMI Interface

1. Make sure your laptop supports full-featured USB C interface (PD, DP protocol) and consult the laptop manufacturer for specific interface functionality.
2. Ensure that the signal source of the TV or monitor is switched to the corresponding HDMI interface.
3. If the HDMI monitor screen is not displayed, check the laptop's interface functionality, try replacing the HDMI cable, and update the laptop's graphics card driver.

### Troubleshooting for USB C PD Interface

1. Note that the USB C PD port only supports one-way charging without data transfer or audio/video transmission.
2. Make sure your laptop or mobile device supports PD charging protocol and use the power adapter that came with the device to connect and charge.

### Troubleshooting for USB Port

1. The USB A interface supports data transmission and power supply up to 5V3A, with a maximum limit of 1.2A per USB connection. If a USB storage device is not recognized, check the connection and compatibility with the laptop. For high-power portable hard drives, connect the PD power adapter to the USB C PD interface of the hub for stable power supply.

2. Note that the USB 2.0 port cannot power an iPhone if connected to a power supply via the USB C PD port. If power is needed, disconnect the USB C PD port first.

Trouble shooting steps

Please refer to the following troubleshooting when the HDMI interface of your hub is not working:

- 1. Laptop using HUB expansion interface connection need to confirm that the laptop has support for full-featured USB C interface (i.e., PD, DP protocol), the specific function of the interface is recommended to consult the laptop manufacturer.
- 2. When using HDMI cable to connect a monitor or TV, please make sure that the signal source of the TV or monitor has been switched to the corresponding interface.
- 3. If the HDMI monitor screen is not displayed when the usb c hub is connected, please check the functionality of the laptop's interface or try to replace the HDMI cable for connection, and try to update the laptop's graphics card driver.

Please refer to the following troubleshooting when the USB C PD interface of your hub is not working:

- 1. USB C PD Port only supports one-way charging, no data transfer, no audio/video transmission.
- 2. The USB C PD port of the HUB only supports PD protocol power adapter connection. Please make sure the laptop or mobile device supports PD charging protocol, and it is recommended to use the power adapter that comes with the laptop or mobile device to connect and charge.

USB Port please refer to the following troubleshooting:

- 1. USB A interface only supports data transmission and power supply up to 5V3A, and single USB maximum limit 1.2A. when USB storage device connection is not recognised, please check the interface connection is good and the format of the storage device is compatible with the laptop, when connecting a high power portable hard drive, please connect the PD power adapter to the USB C PD interface of the HUB for power supply to ensure the power supply is stably connected.
- 2. The USB 2.0 port cannot power for iphone if it is connected to a power supply via the USB C PD port. If you need power, please disconnect the usb c pd port first.
