background sound

voice guide

play/pause
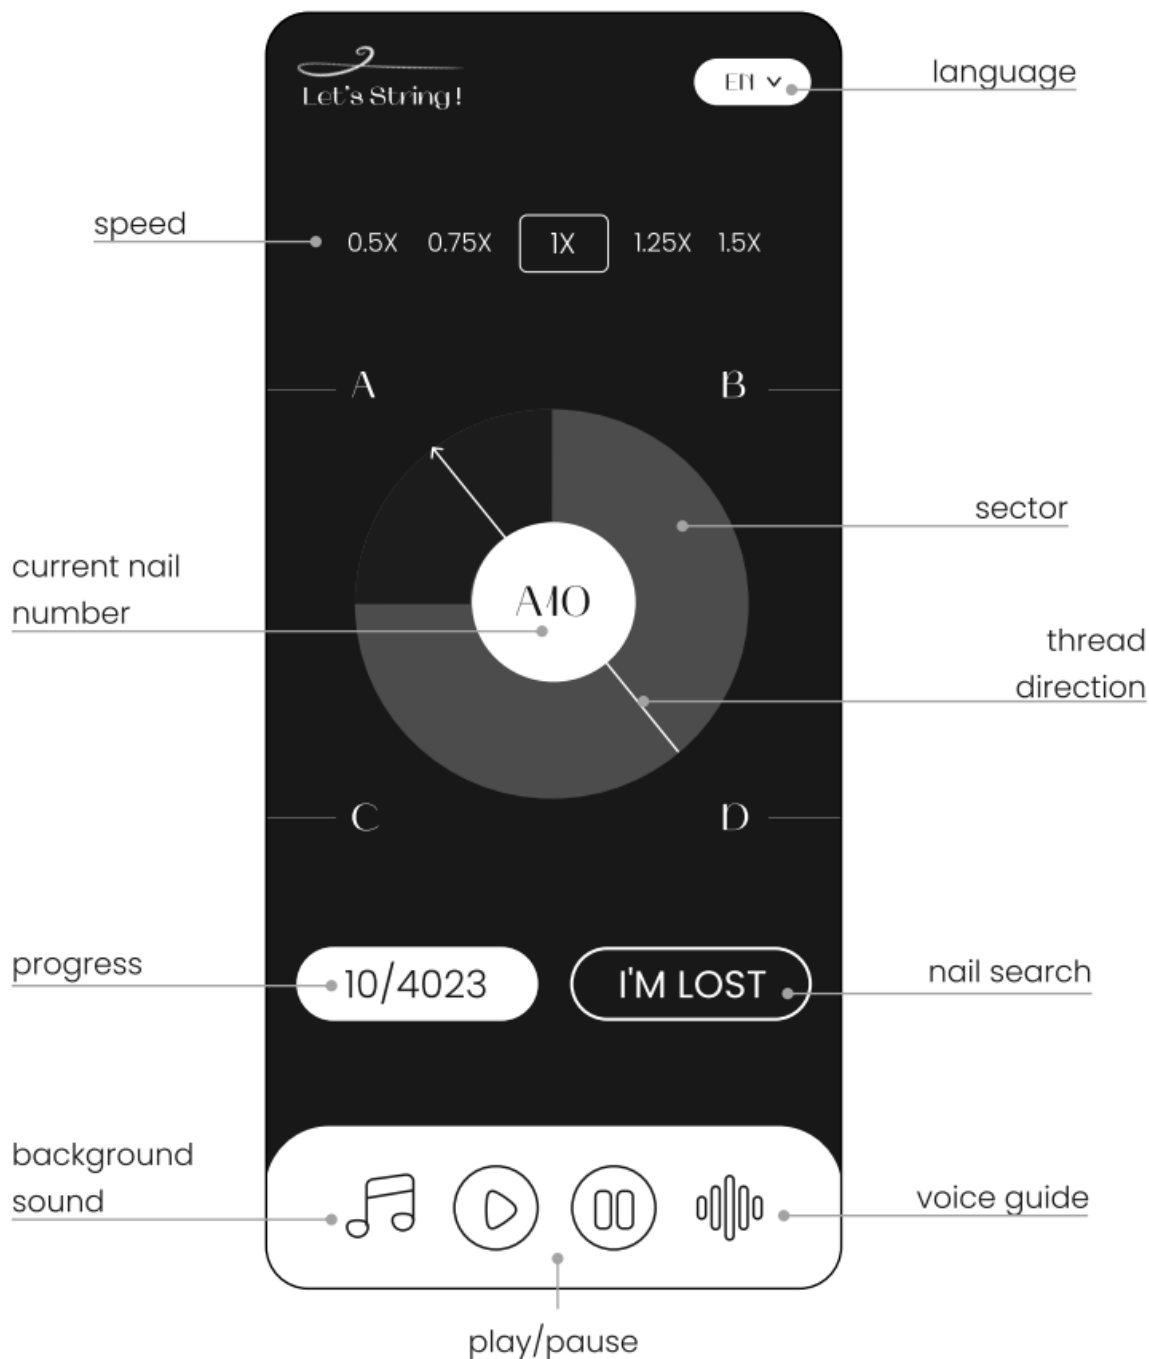

Our generator can be customised to suit your preferences. You have the freedom to select delightful background music or sounds, a soothing voiceover, and adjust the assembling speed according to your preferences.

Faster speeds allow for quicker completion of your Let's String artwork.

Which picture is best to choose

The best photo for a Let's String art is a close-up of a single person with contrast lighting.
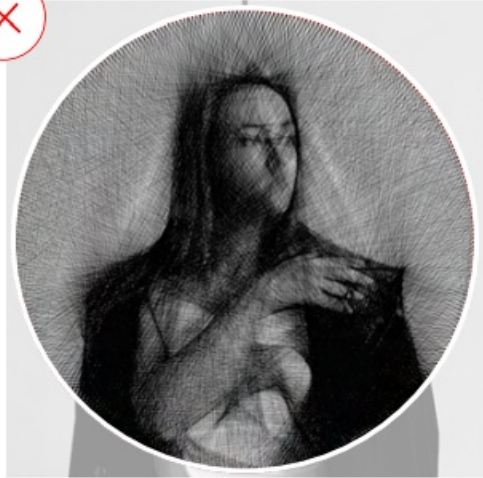

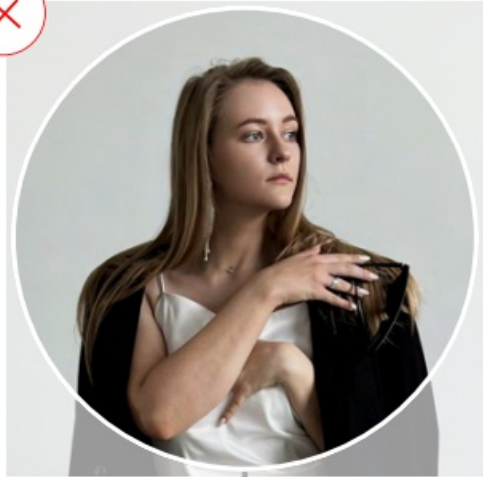

How do I upload an image

1. Go to the Let's String store, or scan the QR code from the unique Let's String code card;
2. Enter the unique 9 character code from the card;
3. Upload your picture;
4. Select the design option;
5. Start assembling using the guides provided.

Assembly instructions can be sent through the mail no more than 3 times.

1. The cardboard angles should be positioned exactly as in the picture. Make sure that the Let's String etching is underneath the D sector. Don't take the board out of the box until you're done!
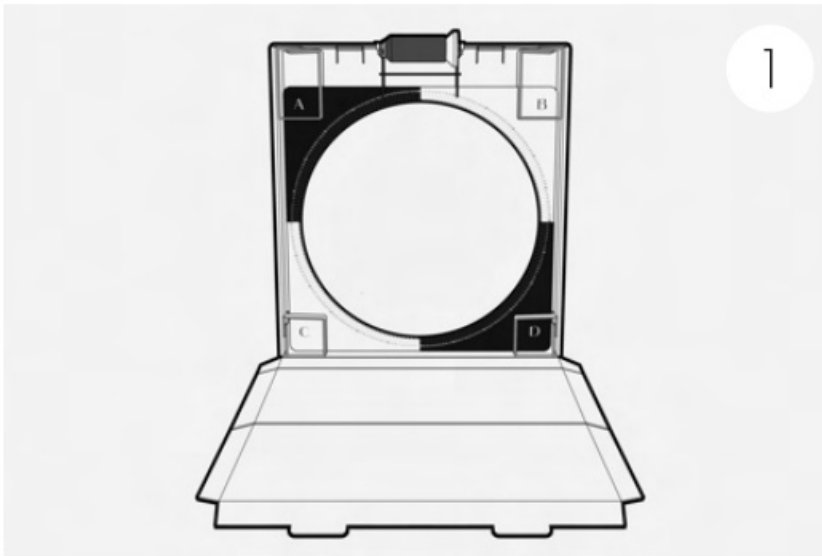

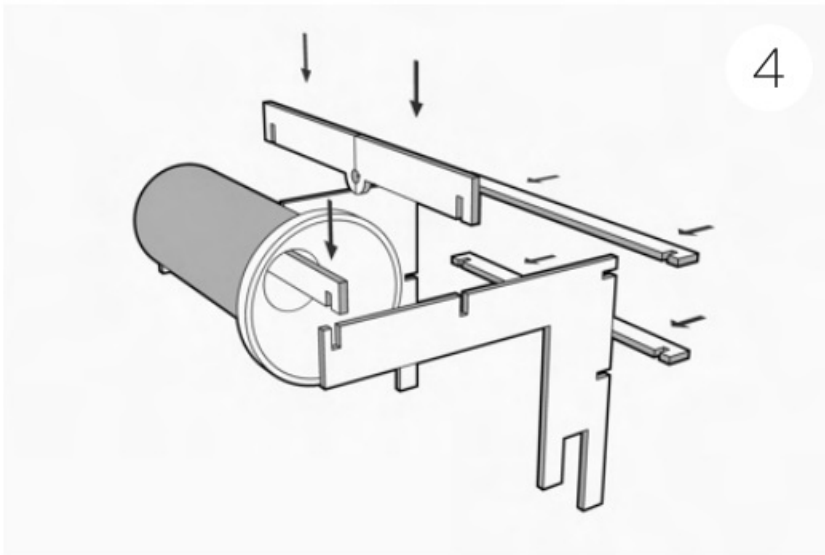

2. To get started, take the thread and the wooden string stand parts out of the box.

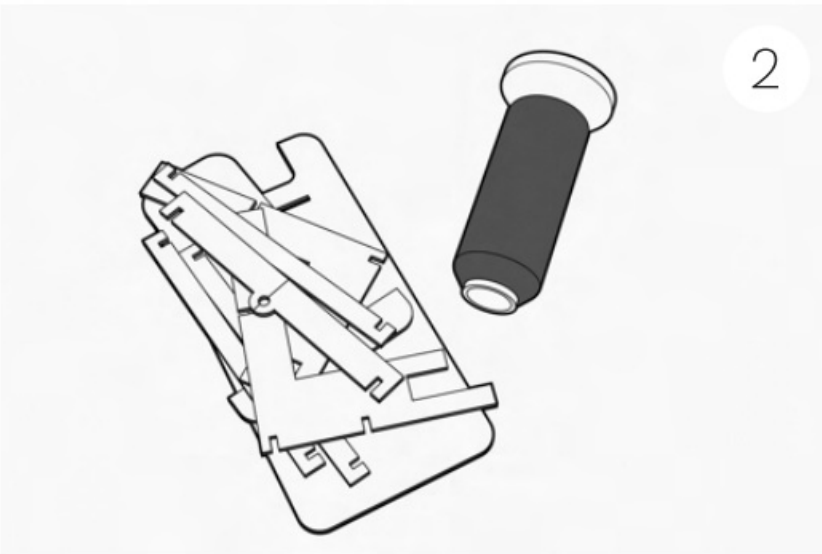

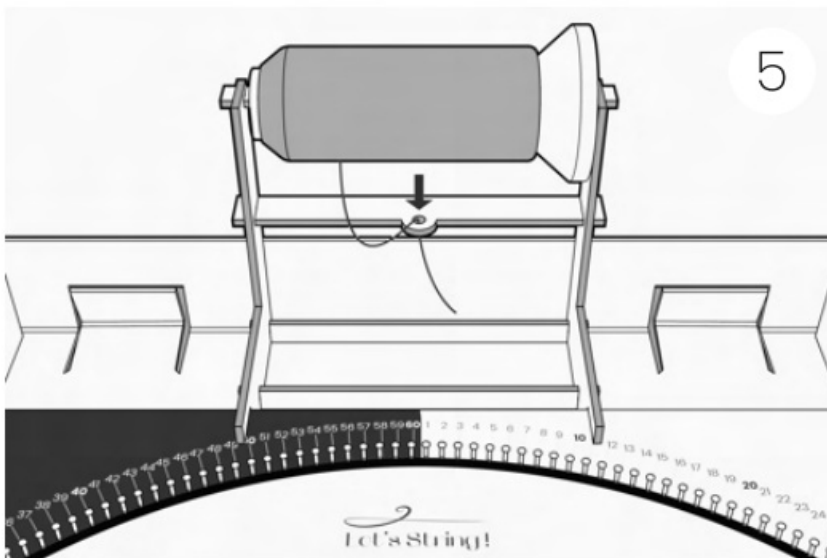

3. As shown in the illustration, fold down the box cover and secure it in the holes.
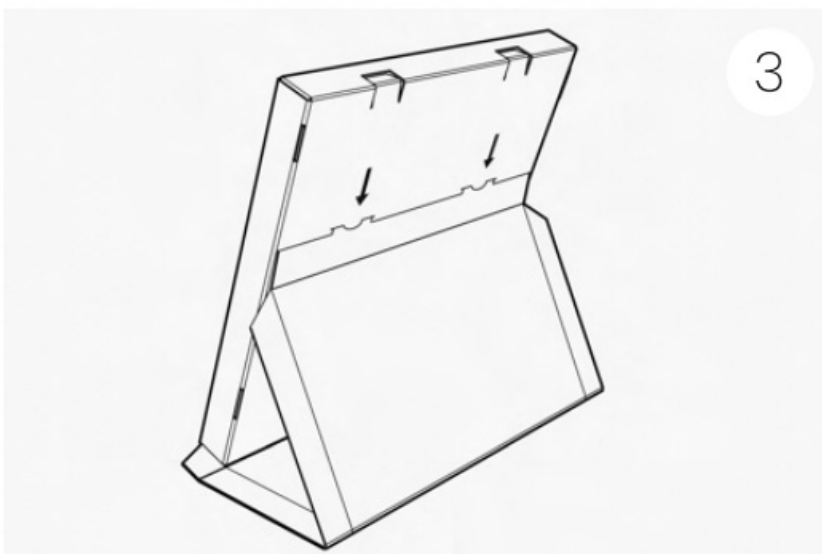

4. Assemble the string holder

5. Pull the string through the hole as shown and attach the holder to the upper side of the box.

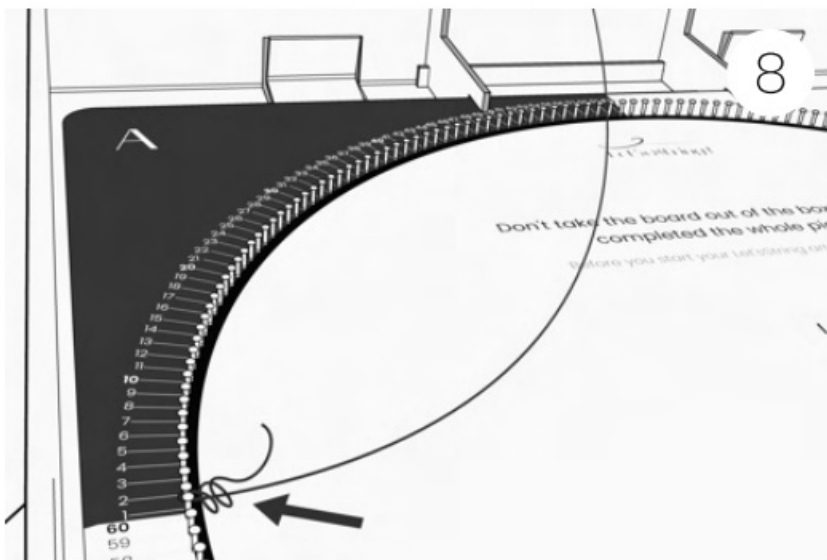

6. Assemble the phone holder.

7. Using the unique Let's String code from the card, upload a photo and run the online assembly guide.

8. Tie a double knot in the A1 nail and start assembling your Let's String artwork according to the guide. A generated voice will guide you through the assembly.

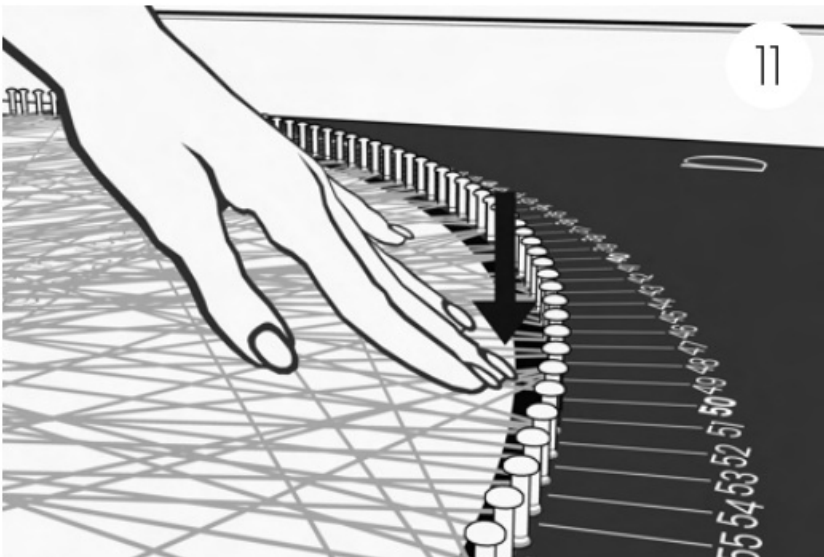

9. If you need to interrupt, simply tighten the string and let it snap into the corner of the string holder as shown.
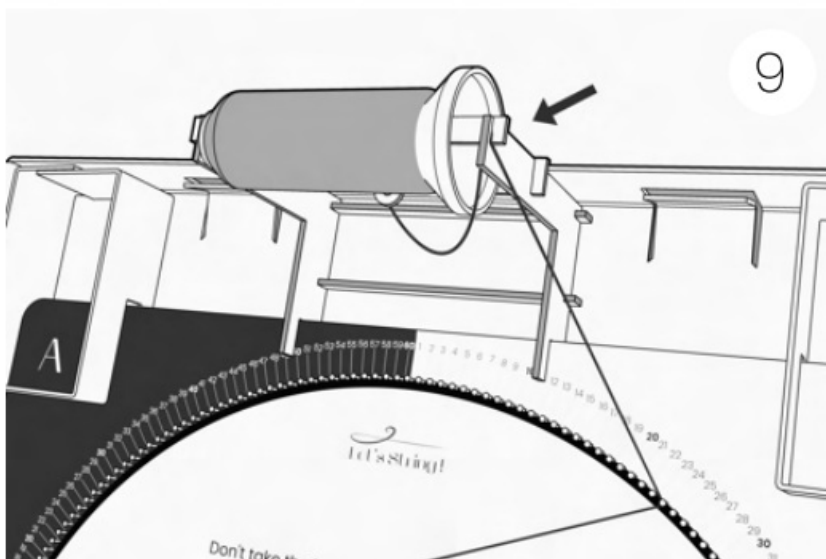

10. When the piece is ready, tie a double knot and cut the thread carefully.

11. Gently press the threads to the board to eliminate any unwanted shadows in your Let's String artwork.
