**LEVO Lux x tCheck Potency Tester Bundle**

## WELCOME

Welcome to the Taste of Infusion, Uplifted.

LĒVO Lux elevates infusion to an art form and is as stunning on the inside as on the outside. No matter your herb of choice, LĒVO streamlines and automates infusion to make it easy, intelligent and mess-free. All you need to get started are a few basic concepts, and then it's time for your imagination to take over. The possibilities are endless: delicious delights, gourmet gifts, stress-relieving salves, sleep-inducing tonics, and more. Keep health and mindfulness top of mind by controlling the purity and potency of what goes in – and on – your body, all the way down to the last drop. Whether you've been doing it for a long time, or if your next infusion is your first, rest assured your LĒVO Lux makes infusion as easy, smooth and sense-arresting as it's ever been. We can't wait to see what you'll make! In fact, we'd love it if you'd share your herbal creations on social media using the hashtag #LEVOMade. If you have any questions, please don't hesitate to contact us via the customer service chat on our website, [LEVOoil.com](https://LEVOoil.com), or at [support@LEVOoil.com](mailto:support@LEVOoil.com)

Only use this appliance for its intended use. When using electrical appliances, always follow basic safety precautions.

- HOUSEHOLD USE ONLY
- POUR USAGE DOMESTIQUE SEULEMENT
- DO NOT IMMERSE IN WATER
- NE PAS IMMERGER

## IMPORTANT SAFEGUARDS

### PLEASE READ AND SAVE THESE INSTRUCTIONS

1. Read all instructions and inspect device and all parts before operating. If any damage is found, do not use and contact LĒVO support to arrange for examination, repair, or electrical or mechanical adjustment by an authorized service representative.

2. We always recommend cleaning LĒVO components before using, even for the first use.
3. Do not touch hot surfaces. LĒVO automatically locks the lid when the heat is on.
4. To protect against risk of electrical shock, do not immerse the device in liquid or handle with wet hands. Do not fill the reservoir past the maximum fill line.
5. Take care to make sure no liquids are in the reservoir when using the DRY or ACTIVATE cycles.
6. Adult supervision is always required, especially during unpacking, assembly, operation and cleaning of the device.
7. Unplug power supply if there are any abnormalities while in use.
8. Power off and unplug your LĒVO when not in use.
9. Avoid contact with moving parts.
10. 10. Allow the machine to cool before removing the reservoir for cleaning. Clean hot surfaces with caution. A wet sponge or cloth used on hot surfaces can cause steam burns. Some cleaners can produce noxious fumes if applied to hot surfaces. We recommend placing the cool reservoir components in the top rack of the dishwasher.
11. Do not impact or hit any components when cleaning or otherwise disassembling.
12. Keep the power cable away from high temperatures and moisture to avoid aging and damage.
13. Never operate the appliance with a damaged cord or plug, after the appliance malfunctions, or after it is dropped or damaged in any manner.
14. Do not let cord hang over edge of table or counter.
15. Do not place on or near a hot gas or electric burner or in a heated appliance.
16. Do not move an appliance containing hot liquids.
17. Do not permanently mount to any surface.
18. The use of attachments not recommended or sold by the manufacturer may cause fire, electric shock, or injury.
19. The use of infusing solvents (grain alcohol and ethanol) is not recommended by the manufacturer and may cause fire, electric shock, or injury.
20. For household use only. Do not use outdoors.
21. Close supervision is necessary when any appliance is used by or near children. Unplug from outlet when not in use and before cleaning. Allow to cool before putting on or taking off parts.
  1. Do not operate any appliance with a damaged cord or plug or after the appliance malfunctions or has been damaged in any manner.
  2. Return appliance to the nearest authorized service facility for examination, repair, or adjustment.
  3. Extreme caution must be used when moving an appliance containing hot oil or other hot liquids.
  4. Always attach plug to appliance first, then plug cord into the wall outlet. To disconnect, turn any control to "off", then remove plug from wall outlet.
22. Appliances (not broilers)
  1. Oversize foods or metal utensils must not be inserted in an appliance as they may create a fire or risk of electric shock.
  2. A fire may occur if the appliance is covered or touching flammable material, including curtains, draperies, walls, and the like, when in operation. Do not store any item on top of the appliance when in operation.
  3. Do not clean with metal scouring pads. Pieces can break off the pad and touch electrical parts involving a risk of electric shock.
  4. Extreme caution should be exercised when using containers constructed of other than metal or glass.
  5. Do not store any materials, other than manufacturers recommended accessories, in this appliance when

not in use.

6. Do not place any of the following materials in the appliance: (List of all materials – that is, paper, cardboard, plastic, and the like).
7. Do not cover any part of the appliance with metal foil. This will cause overheating of the appliance.
8. To power off your LĒVO, switch the unit to the OFF position.

## **SAVE THESE INSTRUCTIONS**

### **INFUSE WITH LĒVO**

LĒVO is designed for activating and infusing a range of botanical ingredients, so you can enjoy their flavor, nutrition, and wellness benefits in your everyday life. Michelin star chefs and independent home cooks alike use infusion techniques to enhance food and experiment with flavors. Skincare, beauty, and other wellness brands also use infusion to incorporate healing herbs into your routine. Unfortunately, most of these infused products are mass produced and can be overly processed.

LĒVO simplifies home infusion, so it's easy to incorporate fresh or dried herbs, fruits, seeds, and more into virtually any recipe you'd like (without preservatives, solvents, or additives).

First, some rules of the road for your LĒVO Lux. Use the LĒVO Time & Temperature Calculator on our app or website for recommended infusion settings:

[levooil.com/calculator](https://levooil.com/calculator)

Please note infusing solvents (grain alcohol and ethanol) is not recommended and may cause fire, electric shock, or injury.

Refer your friends and they can save 10%. Look for the postcard included in your box, or visit our website at [levooil.com/pages/refer](https://levooil.com/pages/refer)

## **RULES FOR THE ROAD**

### **Low & Slow**

When in doubt, infuse at lower temperatures. This will ensure all the wholesome goodness (flavors, aromas, nutrition) of your ingredients remain intact.

### **Coarse Grind**

We recommend coarsely ground herbs, as opposed to finely ground, to prevent unwanted particles in your infusions and final creations.

### **Moisture is Not Your Friend**

The more moisture in the herb, the shorter the shelf life of your infusion. Consider using the DRY cycle before infusing to keep your infusion fresher, for longer (and always store finished infusions in a cool, dark place).

### **Less Refined is Better**

When it comes to fats in your oil or butter, the more refined, the higher the smoke point and more neutral the taste. The less refined, the smoke point is lower and the taste is more flavorful. Plus, there is more added "good stuff" (like healthy fats, antioxidants, and vitamins).

Refinement is the process of separating different elements of a substance and distilling or process-ing it, so it no longer contains all of its original ingredients. Example: White flour is refined, whole wheat flour is unrefined.

## DRY WITH LÈVO LUX

Working with fresh herbs like basil, rosemary, or lavender? Consider using the DRY cycle to keep your infusion fresher, longer. Drying your herbs before infusing them preserves flavor and removes moisture, increasing the shelf life of your final infusion.

Take care to use this setting only with botanicals and never with oil or butter in your reservoir.

We recommend drying your herbs at 115°F/46°C for 3 hours.

## ACTIVATE WITH LÈVO LUX

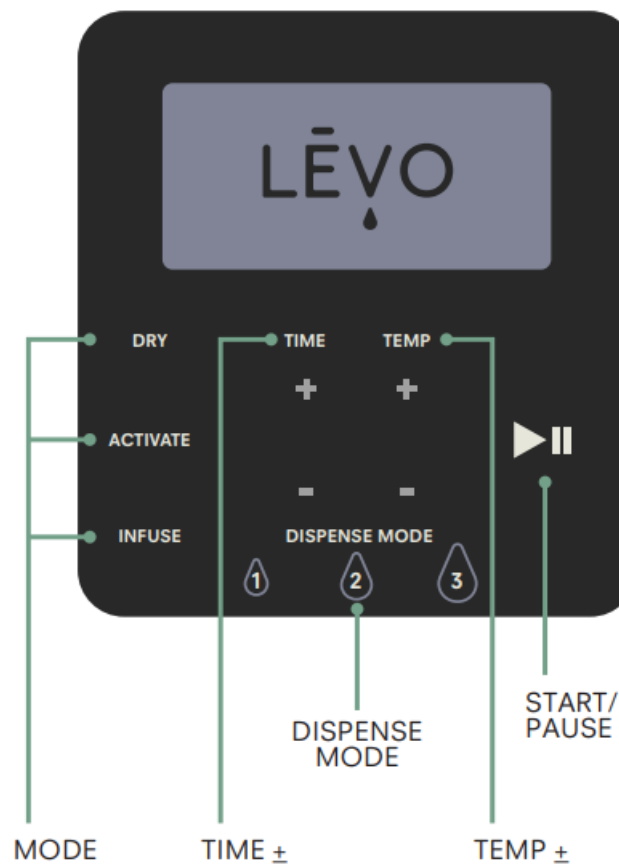

With certain botanical ingredients, properties of the plant can be activated with exposure to higher heat before infusing. This changes the molecular structure and elevates natural potency. Take care to use this setting with botanicals only (and never with oil or butter in your reservoir), or you'll compromise your special ingredients.

### **Science rules!**

This process transforms the construction of the molecule. Knowing this, you can control the potency of your infusions or create different effects using the ACTIVATE cycle.

Check online for more information on botanical activation. We recommend activating at 240°F/116°C for 30 minutes.

## USER INTERFACE

## WHAT IN THE BOX

- Ceramic Coated Reservoir + SILICONE NOZZLE
- Herb Pod + CAP
- Pod Protector
- Silicone Stirrer

## GETTING STARTED

1. Plug the power cord into an electrical outlet.
2. Power the unit by pressing the switch to the on position.
3. Open the lid by pressing the lock button located below the lid to release the latch.
4. Press the RELEASE button to remove the reservoir along with all removable parts inside.
5. Rinse all removable parts with warm, soapy water and dry before placing back into your LĒVO (see full cleaning instructions later in this manual).
6. Make sure the silicone nozzle is securely re-attached to the reservoir spout. Hold down the release button while lowering the reservoir back into place, directing the nozzle through the dispense opening. Let go of the RELEASE button when the reservoir is securely in place.

### GETTING STARTED

7. Place the silicone stirrer on the center mark inside the reservoir.

8. Place the Herb Pod inside the reservoir  
(beside PLACE POD HERE guideline). Make sure you have placed your Pod Protector inside, flat against the bottom of your pod and cover on top if you will be using the DRY or ACTIVATE cycles.
9. Select either DRY, ACTIVATE, or INFUSE.
10. Set your temperature reading to display in either Celsius or Fahrenheit. Toggle between Celsius and Fahrenheit by holding down the temperature + and – buttons simultaneously for two seconds.
  1. This comfy cushion keeps heat delivered evenly and protects your botanicals during Dry and Activate cycles. It's safe to use to Infuse, too. Be sure to place the pod cover on top.

This comfy cushion keeps heat delivered evenly and protects your botanicals during Dry and Activate cycles. It's safe to use to Infuse, too. Be sure to place the pod cover on top.

## ROUTINE INFUSION INSTRUCTIONS

1. Press POWER switch on. Note: The LĒVO should be set on a flat surface and stay there for the remainder of the process.
2. Open the lid by pressing the LOCK button located below the lid to release the latch and double-check that the reservoir is properly nested inside your LĒVO.
3. Remove your Herb Pod from the reservoir and add your ingredients. Make sure not to pack it too tightly, so that liquid can freely flow in and out. With the silicone cover securely on, place your packed Herb Pod in the designated spot in your reservoir  
(where it reads "PLACE POD HERE").
4. Place the silicone stirrer on the center mark inside the reservoir (paddle side up).
5. Add in 5 –16 fl oz (150 – 550 mL) of oil or butter to the reservoir, making sure the contents of your Herb Pod are completely submerged in liquid.

## ROUTINE INFUSION INSTRUCTIONS

6. Press the \*blinking\* button to select INFUSE. If you plan to DRY or ACTIVATE before infusing, skip this part. LĒVO will automatically suggest a default time and temperature for the INFUSE cycle. You can adjust the time (up to 10 hours) and temperature (up to 200°F/93°C) settings, as needed, by pressing the + and – buttons. Once you're happy with your settings, press the START/PAUSE icon. Use our handy Time & Temperature Calculator on our website or mobile app for recommendations on suggested infusion settings: [levooil.com/calculator](http://levooil.com/calculator)

### ROUTINE INFUSION INSTRUCTIONS

7. If needed, you can pause the infusion at any time during the cycle by pressing the START/PAUSE icon or by pressing the LOCK button located below the lid, pausing your infusion. Closing the lid and pressing the START/PAUSE icon will continue your infusion.

### Warming Up

Note that the time it takes LÉVO to reach your set temperature can vary depending on factors like altitude, your cycle settings, and the type of ingredients you're using. Allow a range of approximately 15-30 minutes to reach your set cycle temperature.

8. Your LÉVO will display WARMING UP as it preheats to your desired temperature and then alert you when the preset temperature has been reached. During the cycle, the display will show the **REMAINING TIME and CURRENT TEMPERATURE.**

**NOTE:** You can change time and temperature or manually end your cycle at any time.

9. Your LÉVO will alert you when the timer is up and your infusion is complete. The display will read INFUSION COMPLETE CHOOSE

### **DISPENSE MODE.**

The reservoir nozzle is held in place by a pinch valve; the release button opens the valve allowing you to remove your reservoir with ease.

#### **10. Now you're ready to dispense your infusion!**

When dispensing your infusion, it is important to select the appropriate dispense mode to efficiently drain the reservoir and minimize air bubbles. Based on your carrier oil, use the guide below to select the best dispense mode for your infusion:

**Dispense Mode 1:** For water based liquids like milk, tea, vinegar

**Dispense Mode 2:** For fat based liquids like olive oil, coconut oil, and butters

**Dispense Mode 3:** For thick/viscous liquids like honey, syrups, and beeswax

Place your container of choice on the surface under the dispenser and choose which DISPENSE MODE is appropriate then press and hold the DISPENSE button to drain. Allow the infusion to cool for 5–10 minutes before handling. Use caution, as it may be hot.

#### **11. Turn off and clean your LĒVO after each use.**

**NOTE:** You must fully dispense your batch before removing the reservoir for cleaning.

### **DRY & ACTIVATE INSTRUCTIONS**

1. Press POWER switch to on position to turn on.
2. Open the lid by pressing the LOCK button below the lid to release the latch and double check that the reservoir is properly nested inside your LĒVO Lux.
3. Remove the metal Herb Pod and place the silicone Pod Protector flat against the bottom of the Herb Pod. Then add your ingredients, and take care not to pack too tightly. With the silicone Herb Pod cap secured, place the filled Herb Pod back in the reservoir, lining up the magnetic strip with "PLACE POD HERE" text.
4. Select the \*blinking\* DRY or ACTIVATE button.
5. LĒVO will automatically suggest a default time and temperature for the selected cycle. You can adjust the time and temperature setting as needed by pressing the + and - buttons. Press the START/PAUSE icon.  
The Silicone Stirrer is not needed for Dry and Activate cycles- we recommend removing it and adding back before you Infuse.
6. If needed, you can pause anytime during the cycle by pressing the LOCK button located below the lid to release the latch or by pressing the START/PAUSE icon, pausing your infusion. Close the lid until you hear the latch "click" then press the START/PAUSE button to continue your DRY or ACTIVATE cycle.
7. Your LĒVO Lux will display WARMING UP as it preheats to your desired temperature and then alert you with a

sound when the preset temperature has been reached. During the cycle, the display will show REMAINING TIME and CURRENT TEMPERATURE.

NOTE: You can change time and temperature or manually end your cycle at any time.

8. You'll receive an alert when the timer is up and your cycle is complete. The display will read DRYING/ACTIVATING COMPLETE.
9. Having dried and/or activated your botanical ingredients, now is a great time to infuse. Check out INFUSION INSTRUCTIONS on page 10.

Take careful precaution only to use the DRY/ACTIVATE cycles for treating your botanicals – free of any oil, butter or liquids.

## CLEANING & STORAGE

1. After dispensing your infusion, hold down the RELEASE button near the top lip of the reservoir and lift the reservoir out by placing your finger under the lip and pulling straight up. Ensure you are not mid-cycle.
2. Place the reservoir and attached silicone nozzle on the top rack of your dishwasher or set aside to hand wash. For the most thorough clean, you can unscrew the nozzle and place it into the utensils basket in your dishwasher.
3. Place the silicone stirrer and Herb Pod into the utensils basket in your dishwasher, or set aside to hand wash.
4. After each use, wipe away any spillage from the oil tray beneath the dispenser or residue on the bottom of the top lid with diluted vinegar. The silicone lid seal is removable and also dishwasher safe.
5. For a complete clean, use a cotton swab after every few infusions to remove residue from inside the dispensing hole, where the oil is released.

### Helpful Tips

With its sleek, minimalist design, LÉVO Lux looks great on your countertop, but it can be easily stored. Before storing for an extended period, be sure that the reservoir is freshly clean and dry, and the silicone lid is secured on top with the cap. If dust collects on the surface, wipe away with diluted vinegar.

## IMPORTANT SAFEGUARDS

Only use this appliance for its intended use. When using electrical appliances, always follow basic safety precautions. HOUSEHOLD USE ONLY.

**DO NOT IMMERSE IN WATER.**

### PLEASE SAVE THESE INSTRUCTIONS

1. Read all instructions and inspect device and all parts before operating. If any damage is found, do not use and contact LÉVO support to arrange for examination, repair, or electrical or mechanical adjustment by an authorized service representative.

2. We always recommend cleaning LĒVO components before using, even for the first use.
3. Do not touch hot surfaces. LĒVO automatically locks the lid when the heat is on.
4. To protect against risk of electrical shock, do not immerse the device in liquid or handle with wet hands. Do not fill the reservoir past the maximum fill line.
5. Take care to make sure no liquids are in the reservoir when using the DRY or ACTIVATE cycles.
6. Adult supervision is always required, especially during unpacking, assembly, operation and cleaning of the device.
7. Unplug power supply if there are any abnormalities while in use.
8. Power off and unplug your LĒVO when not in use.
9. Avoid contact with moving parts.

### **IMPORTANT SAFEGUARDS**

10. Allow the machine to cool before removing the reservoir for cleaning. Clean hot surfaces with caution. A wet sponge or cloth used on hot surfaces can cause steam burns. Some cleaners can produce noxious fumes if applied to hot surfaces. We recommend placing the cool reservoir components in the top rack of the dishwasher.
11. Do not impact or hit any components when cleaning or otherwise disassembling.
12. Keep the power cable away from high temperatures and moisture to avoid aging and damage.
13. Never operate the appliance with a damaged cord or plug, after the appliance malfunctions, or after it is dropped or damaged in any manner.
14. Do not let cord hang over edge of table or counter.
15. Do not place on or near a hot gas or electric burner or in a heated appliance.
16. Do not move an appliance containing hot liquids.
17. Do not permanently mount to any surface.
18. The use of attachments not recommended or sold by the manufacturer may cause fire, electric shock, or injury.
19. The use of infusing solvents (grain alcohol and ethanol) is not recommended by the manufacturer and may cause fire, electric shock, or injury.
20. For household use only. Do not use outdoors.

### **TROUBLESHOOTING**

If you have any issues with your machine, check to see whether these troubleshooting instructions solve the issue. If the problem persists, contact us for customer support.

**Symptom:** My LĒVO doesn't turn on. Ensure that the power cord is plugged into the back of the unit and a wall outlet, turn the power switch to the on position. In some cases, a household circuit may become overloaded from the use of electrical appliances, causing the outlet to stop supplying power. Try a different outlet that you're sure works, then turn the unit on.

**Symptom:** The reservoir was accidentally overfilled and liquid seeped under the reservoir. LĒVO heating mechanism and electronics are protected. Immediately power off and unplug the device. Then, while pressing the RELEASE button, lift the reservoir up and out of the device and set aside. Use diluted vinegar to wipe away liquid from the inside of the device and run the reservoir (plus stirrer and pod) through a normal cleaning cycle in your dishwasher before putting back in place. Don't be alarmed if a small amount of residue causes a mild burning smell the next time the unit is used.

**Symptom:** I smell burned butter or oil. It's likely that some liquid spilled onto the heat plate. This requires additional clean up below the reservoir. Fully dispense any remaining oil or butter before pressing the Reservoir

Release button to remove the reservoir and set aside. Taking care to wait until the unit is cooled, wipe the heat plate with diluted vinegar and allow it to dry completely before replacing your reservoir back inside.

**Symptom:** LĒVO is leaking. LĒVO dispenses through a silicone nozzle that screws onto the base of the reservoir. If the nozzle is not screwed on straight or properly inserted into the unit, liquid can leak out of the nozzle onto the heat plate beneath the reservoir. To avoid this, hold down the RELEASE button when you are lowering the reservoir into the LĒVO chamber and line the nozzle up with the dispensing hole. Hold down the RELEASE button when removing the empty reservoir after your infusion is complete. If the nozzle rips and is stuck inside the machine, press and hold the RELEASE button to release the pinch valve while removing it from the dispense hole with tweezers and contact us for a replacement piece.

Tag your creations with #LEVOMade on social! Check out the LĒVO blog for more tips of using your machine and avoiding common issues.
